Ethnobotany of India Volume 4 Western and Central Himalayas is the 4th volume of the 5 volume set an informative book series on the ethnobotanical aspects of India. The books cover different regions including Volume 1 Eastern Ghats and Deccan Volume 2 Western Ghats and West Coast of Peninsular India Volume 3 North East India and Andaman and Nicobar Islands Volume 4 Western and Central Himalayas Volume 5 The Indo Gangetic Region. Each volume looks at the important ethnic plants of the specific region. Volume 4 covers the Western and Central Himalayas the well known mountain range on the Indian subcontinent. The unique flora and fauna of the Himalayas are varied affected by climate rainfall altitude and soils and are vulnerable to impacts from climate change. The editors espouse that because indigenous non Western societies form the vast majority of people now as well as in the past a study of their plant interrelationships is necessary and India is one of the most important regions of the old world for its ancient and culturally rich and diverse knowledge of ethnobotany. With this in mind these volumes share a great deal of information that will be valuable to plant botanists and others working in and interested in ethnobotany. This important volume covers the ethnobotanical aspects of many plants of the region. It looks at ethnic diversity of people ethnic food plants and food preparation ethnomedical aspects of plants psychedelic plants and their possible link to soma a vedic ritual drink whose plant origins are a mystery ethnoveterinary medicinal plants ethno conservation practices biodiversity heritage sites. The volume includes the details of the plants used their scientific names the parts used and how the plants are used providing the what how and why of plant usage. The book is well illustrated with 20 color and 67 b w illustrations. Together the five volumes in the Ethnobotany of India series presents the available ethnobotanical knowledge of India in one place. India's ancient and culturally rich and diverse information and use of ethnobotany will be valuable to those in the fields of botany and plant sciences pharmacognosy and pharmacology nutraceuticals and others. The books also consider the threat to plant biodiversity imposed by environmental degradation which impacts cultural diversity.

Diseases of Horticultural Crops, 1999 The book covers around 700 species covering Latin family common and local names distribution market rate chemical constituents. Sketches facilitates identity and comprehension by the reader.

Volume 1 Spatio Temporal Monitoring of Forests and Climate is aimed to describe the recent progress and developments of geospatial technologies remote sensing and GIS for assessing monitoring and managing fragile Himalayan ecosystems and their sustainability under climate change It is a collective research contribution from renowned researchers and academicians working in the Hindu Kush Himalayan HKH mountain range The Himalayas ecosystems have been facing substantial transformation due to severe environmental conditions land transformation forest degradation and fragmentation The authors utilized satellite datasets and algorithms to discuss the intricacy of land use land cover change forest and agricultural ecosystems canopy height estimation above ground biomass wildfires carbon sequestration and landscape restoration Furthermore the potential impacts of climate change on ecosystems biodiversity and future food and nutritional security are also addressed including the impact on the livelihood of people of the Himalayas This comprehensive Handbook explains the advanced geospatial technologies for mapping and management of natural resources of the Himalayas Key Features Explains multiple aspects of geospatial technologies for studying fragile Himalayan ecosystems and sustainability Focuses on the utility of interferometric synthetic aperture radar SAR modeling for canopy height Explain how remote sensing techniques are useful for deriving the above ground biomass gross primary productivity GPP and carbon fluxes Addresses how geospatial technologies are valuable for understanding vegetation dynamics composition and landscape restoration due to shifts in timberline and forest fires Includes contributions from global professionals working in the HKH mountain range Readership The Handbook serves as a valuable reference for students researchers scientists ecologists agricultural scientists meteorologists decision makers and all others who wish to advance their knowledge on vegetation remote sensing considering climate change in the HKH region **Environmental Change in the Himalayan Region**

environment and conservation issues pertaining to the Himalayas spanning Pakistan Nepal India Bhutan and Myanmar Environmental degradation changes in snow cover and glaciers in India Bhutan threats to protected areas and biodiversity in this ecologically fragile region are assessed in twelve distinct regional case studies **Himalayan Glaciers** National

Research Council, Division of Behavioral and Social Sciences and Education, Committee on Population, Division on Earth and Life Studies, Water Science and Technology Board, Board on Atmospheric Studies and Climate, Committee on Himalayan Glaciers, Hydrology, Climate Change, and Implications for Water Security, 2012-11-29 Scientific evidence shows that most glaciers in South Asia s Hindu Kush Himalayan region are retreating but the consequences for the region s water supply are

unclear this report finds The Hindu Kush Himalayan region is the location of several of Asia's great river systems which provide water for drinking irrigation and other uses for about 1.5 billion people Recent studies show that at lower elevations glacial retreat is unlikely to cause significant changes in water availability over the next several decades but other factors including groundwater depletion and increasing human water use could have a greater impact Higher elevation areas could experience altered water flow in some river basins if current rates of glacial retreat continue but shifts in the location intensity and variability of rain and snow due to climate change will likely have a greater impact on regional water supplies

Himalayan Glaciers Climate Change Water Resources and Water Security makes recommendations and sets guidelines for the future of climate change and water security in the Himalayan Region This report emphasizes that social changes such as changing patterns of water use and water management decisions are likely to have at least as much of an impact on water demand as environmental factors do on water supply Water scarcity will likely affect the rural and urban poor most severely as these groups have the least capacity to move to new locations as needed It is predicted that the region will become increasingly urbanized as cities expand to absorb migrants in search of economic opportunities As living standards and populations rise water use will likely increase for example as more people have diets rich in meat more water will be needed for agricultural use The effects of future climate change could further exacerbate water stress

Himalayan Glaciers Climate Change Water Resources and Water Security explains that changes in the availability of water resources could play an increasing role in political tensions especially if existing water management institutions do not better account for the social economic and ecological complexities of the region To effectively respond to the effects of climate change water management systems will need to take into account the social economic and ecological complexities of the region This means it will be important to expand research and monitoring programs to gather more detailed consistent and accurate data on demographics water supply demand and scarcity

Climate Change in the Himalayas Amit Kumar, Wil De Jong, Munesh Kumar, Rajiv Pandey, 2023-08-05 Climate Change in the Himalayas Vulnerability and Resilience of Biodiversity and Forest Ecosystems explores and assesses issues affecting species survival in the rich forests of the Himalayan region This book characterizes current biodiversity statuses related ecosystem services and provides new evidence and solutions for climate change effects on Himalayan animals and plants Written by regional and international experts on climate change ecosystems and the Himalayas this book analyzes current species threats loss of habitats and carbon effects It identifies critical areas requiring special attention and provides workable solutions for protection and ecosystem services As many plant and animal species continue to be classified as extinct due to climate change urbanization and failing ecosystems analyses and techniques in this book offer resolutions for sustaining current risks and curbing future risks These can also be applied to other biodiverse at risk regions of the world Offers nature based solutions along with policy and governance measures such as the application of the UNFCCC Paris Agreement Provides mitigation and adaptation processes for current and future

climate change impacts Includes a focus on soil sustainability Sustainable Natural Resource Management in the Himalayan Region Roshan Man Bajracharya, Bishal K. Sitaula, Smriti Gurung, Nani Raut, 2021 The greater Himalayan region stretching from Afghanistan in the west to Myanmar in the east is home to about a quarter of a billion people who greatly depend on available natural resources for their survival and livelihoods The ever increasing population pressure and changing climate have grave implications for the sustenance of human health and habitation in the foreseeable future The region is confronted with numerous challenges related to forest degradation land productivity disaster risk water management biodiversity loss erratic climatic patterns as well as socio political capacity The limits of arable land have essentially been reached while the need for enhancing production to sustain human nutritive requirements and livelihoods continues to increase Hence the intensification of agriculture has become a necessity rather than a choice Yet producing greater numbers of crops and quantities of food fiber and other materials on the same parcel of land runs the risk of degrading the soil fertility productivity and overall quality Therefore means to achieve this without irreversibly damaging the soil and land resource base have become imperative To this end agro forestry agro silvi pastoral systems and the adoption of a variety of regenerative crops soil and water management and conservation practices offer the potential to deliver multiple benefits without sacrificing the very resource upon which the human population depends The need for ecologically sound and sustainable management of natural resources in the Himalayan region as well as the adaptation of local communities to the impacts of climate change and measures for its mitigation cannot be over emphasized This book presents findings on approaches to sustainable land management and the intensification of agriculture and animal husbandry related to soil organic matter management and carbon sequestration for multiple benefits and the agroforestry as a crop diversification strategy with livelihood and climate mitigation adaptation benefits along with other aspects of forest biodiversity and water resources management The book deals with technical socio economic policy and biodiversity issues related to the sustainable use and management of natural resources namely forests soil land water crops animal husbandry and diversity of flora fauna as well as disaster risk and vulnerability of communities in the Himalayan region There is a continuing need to study and research approaches for harmonizing human needs and lifestyles with natural ecosystems and processes so that both may co exist in a mutually beneficial manner **The Himalayan Dilemma** Jack D. Ives, Bruno Messerli, 2003-09-02 This is an important book that deserves to be read by everyone concerned with presenting major environmental issues Geography an essential text for policy makers and aid professionals as well as for students of environmental studies and international development It is indeed a book appropriate to the urgent and critical issues which it addresses Journal of Environmental Management **Water, Cryosphere, and Climate Change in the Himalayas** Ajay Kumar Taloor, Bahadur Singh Kotlia, Kireet Kumar, 2021-04-24 This edited book summarizes numerous research studies on remote sensing and GIS of natural resource management for the Himalaya region done by Indian Institutions and Universities over the last decade It

gives an overview of hydrometeorological studies on Himalayan water resources and addresses concerns in the development of water resources in this region which is dealing with an increased pressure in population industrialization and economic development While the source of some of the major rivers of India are found in the Himalayas the glaciers and water bodies in the region are continuously shrinking leading to a depletion of water and deterioration of water quality This is affecting a population of up to 2.5 billion people The ecosystems have been under threat due to deforestation loss of biodiversity expansion of agriculture and settlement overexploitation of natural resources habitat loss and fragmentation poaching mining construction of roads and large dams and unplanned tourism Spaceborne remote sensing with its ability to provide synoptic and repetitive coverage has emerged as a powerful tool for assessment and monitoring of the Himalayan resources and phenomena This work serves as a resource to students researchers scientists professionals and policy makers both in India and on a global level

This book delves into Himalayan Natural Resources Ecothreats Restoration Study. Himalayan Natural Resources Ecothreats Restoration Study is a vital topic that must be grasped by everyone, from students and scholars to the general public.
