significant financial stress primarily due to a combination of increasing production costs and declining consumer demand. Among the challenges reported by livestock raisers the most frequent ones were sickness or death of animals followed closely by high input prices. The cost of production for poultry and swine doubled over a two year period largely driven by rising feed and other input costs. Specifically the price of 50 kg of broiler chicken feed increased by 61 percent between 2021 and 2022 while the price of 30 kg of pig feed increased by 51 percent during the same period. These significant cost increases have led to a notable decrease in livestock income in real terms. Moreover the triple crisis has affected consumption patterns with households reducing their expenditure on food particularly animal sourced food. As a result livestock consumption has also decreased adding to the challenges faced by the livestock industry. In our sample we found that 44 percent of households were involved in livestock raising with 33 percent of households earning income from this activity. However it is concerning that 18 percent of these households had to resort to selling livestock as a coping strategy to meet their daily needs rather than as a deliberate business decision. This paper presents a comprehensive overview of the Myanmar livestock sector during the period from September 2021 to August 2022. It delves into various aspects starting with livestock production examining the challenges faced by farmers production costs and income. Additionally the study analyzes the trends in animal sourced food consumption in Myanmar. Finally the paper discusses the critical issues and challenges that the sector is likely to encounter and proposes several recommended actions.
