Integer Programming and Related Areas Rabe v. Randow,2012-12-06 The fields of integer programming and combinatorial optimization continue to be areas of great vitality with an ever increasing number of publications and journals appearing A classified bibliography thus continues to be necessary and useful today even more so than it did when the project of which this is the fifth volume was started in 1970 in the Institut fur Okonometrie und Operations Research of the University of Bonn The pioneering first volume was compiled by Claus Kastning during the years 1970 1975 and appeared in 1976 as Volume 128 of the series Lecture Notes in Economics and Mathematical Systems published by the Springer Verlag Work on the project was continued by Dirk Hausmann Reinhardt Euler and Rabe von Randow and resulted in the publication of the second third and fourth volumes in 1978 1982 and 1985 Volumes 160 197 and 243 of the above series The present book constitutes the fifth volume of the bibliography and covers the period from autumn 1984 to the end of 1987 It contains 5864 new publications by 4480 authors and was compiled by Rabe von Randow Its form is practically identical to that of the first four volumes some additions having been made to the subject list

Optimal Structural Design under Stability Constraints Antoni Gajewski,Michal Zyczkowski,2012-12-06 The first optimal design problem for an elastic column subject to buckling was

formulated by Lagrange over 200 years ago However rapid development of structural optimization under stability constraints occurred only in the last twenty years In numerous optimal structural design problems the stability phenomenon becomes one of the most important factors particularly for slender and thin walled elements of aerospace structures ships precision machines tall buildings etc In engineering practice stability constraints appear more often than it might be expected even when designing a simple beam of constant width and variable depth the width if regarded as a design variable is finally determined by a stability constraint lateral stability Mathematically optimal structural design under stability constraints usually leads to optimization with respect to eigenvalues but some cases fall even beyond this type of problems A total of over 70 books has been devoted to structural optimization as yet but none of them has treated stability constraints in a sufficiently broad and comprehensive manner The purpose of the present book is to fill this gap The contents include a discussion of the basic structural stability and structural optimization problems and the pertinent solution methods followed by a systematic review of solutions obtained for columns arches bar systems plates shells and thin walled bars A unified approach based on Pontryagin's maximum principle is employed inasmuch as possible at least to problems of columns arches and plates Parametric optimization is discussed as well
