Introduction To Object Oriented Databases Computer Systems Series:

Introduction to Object-Oriented Databases Won Kim, 2008-07 Introduction to Object Oriented Databases provides the first unified and coherent presentation of the essential concepts and techniques of object oriented databases It consolidates the results of research and development in the semantics and implementation of a full spectrum of database facilities for object oriented systems including data model query authorization schema evolution storage structures query optimization transaction management versions composite objects and integration of a programming language and a database system The book draws on the author's Orion project at MCC currently the most advanced object oriented database system and places this work in a larger context by using relational database systems and other object oriented systems for comparison Won Kim is Director of the Object Oriented and Distributed Systems Laboratory at Microelectronics and Computer Technology Corporation MCC in Austin Texas Contents Introduction Data Model Basic Interface Relationships with Non Object Oriented Databases Schema Modification Model of Queries Query Language Authorization Storage Structures Query Processing Transaction Management Semantic Extensions Integrating Object Oriented Programming and Databases Architecture Survey of Object Oriented Database Systems Directions for Future Research and Development Index Data Structures in Object-Oriented Databases Thomas A. Mueck, Martin L. Polaschek, 2012-12-06 Object oriented database management systems OODBMS are used to implement and maintain large object databases on persistent storage Regardless whether the underlying database model follows the object oriented the relational or the object relational paradigm a key feature of any DBMS product is content based access to data sets On the one hand this feature provides user friendly query interfaces based on predicates to describe the desired data On the other hand it poses challenging questions regarding DBMS design and implementation as well as the application development process on top of the DBMS The reason for the latter is that the actual query performance depends on a technically meaningful use of access support mechanisms In particular if chosen and applied properly such a mechanism speeds up the execution of predicate based queries In the object oriented world such queries may involve arbitrarily complex terms referring to inheritance hierarchies and aggregation paths These features are attractive at the application level however they increase the complexity of appropriate access support mechanisms which are known to be technically non trivial in the relational world OOIS'94 Dilip Patel, Yuan Sun, Shushma Patel, 2012-12-06 This volume contains the papers presented at the International Conference on Object Oriented Information Systems OOIS 94 held at South Bank University London December 19-21 1994 In response to our call for papers a total 85 papers from 24 different countries were submitted Each paper was evaluated by at least two Program Committee members and an additional reviewer Together we selected 41 papers for presentation at the conference and inclusion in the Proceedings Also included are the keynote addresses by Peter Gray and Michael Jackson The other submissions were recommended for presentation in the poster sessions Peter Gray our invited speaker evaluates the problems of object oriented systems and data independence by

looking at how object oriented database applications are failing to perceive its benefits and instead rely too much on encapsulation He suggests alternative kinds of object storage to preserve data independence The second invited speaker Michael Jackson describes a way of solving problems by focusing directly on the problems themselves their components and structures and on the relationships between the problem and the solution method He discusses a particular view of the role of object orientation in software development

Information Modelling and Knowledge Bases IV Hannu

Kangassalo, Hannu Jaakkola, 1993 Database and Expert Systems Applications A Min Tjoa, Isidro Ramos, 2012-12-06 The Database and Expert Systems Application DEXA conferences are mainly oriented to establish a state of the art forum on Database and Expert System applications But Practice without Theory has no sense as Leonardo said five centuries ago In this Conference we try a compromise between these two complementary aspects A total of 5 sessions are application oriented ranging from classical applications to more unusual ones in Software Engineering Recent research aspects in Databases such as activity deductivity and or Object Orientation are also present in DEXA 92 as well as the implication of the new data models such as OO Model Deductive Model etc included in the Modelling sessions Other areas of interest such as Hyper Text and Multimedia application together with the classical field of Information Retrieval are also considered Finally Implementation Aspects are reflected in very concrete fields A total of of nearly 200 papers submitted from all over the world were sent to DEXA 92 Only 90 could be accepted A Poster session has also been established DEXA 90 was held in Vienna Austria DEXA 91 in Berlin Germany and DEXA 92 will take place in Valencia Spain where we are celebrating the discovery of the New World just five centuries ago in Leonardo's age Both the quality of the Conference and the compromise between Practice and Theory are due to the credit of all the DEXA 92 authors

Entity-Relationship Approach - ER '93 Ramez A. Elmasri, 1994-07-28

This monograph is devoted to computational morphology particularly to the construction of a two dimensional or a three dimensional closed object boundary through a set of points in arbitrary position By applying techniques from computational geometry and CAGD new results are developed in four stages of the construction process a the gamma neighborhood graph for describing the structure of a set of points b an algorithm for constructing a polygonal or polyhedral boundary based on a c the flintstone scheme as a hierarchy for polygonal and polyhedral approximation and localization d and a Bezier triangle based scheme for the construction of a smooth piecewise cubic boundary

Foundations of Data Organization and Algorithms David B. Lomet, 1993-09-29

This volume presents the proceedings of the Fourth International Conference on Data Organization and Algorithms FODO 93 held in Evanston Illinois FODO 93 reflects the maturing of the database field which has been driven by the enormous growth in the range of applications for databasesystems The non standard applications of the not so distant past such as hypertext multimedia and scientific and engineering databases now provide some of the central motivation for the advances in hardware technology and data organizations and algorithms The volume contains 3 invited talks 22 contributed papers and 2 panel papers The contributed

papers are grouped into parts on multimedia access methods text processing query processing industrial applications physical storage and new directions

Parallel, Object-Oriented, and Active Knowledge Base Systems Ioannis Vlahavas, Nick Bassiliades, 2013-03-09 Knowledge Base Systems are an integration of conventional database systems with Artificial Intelligence techniques They provide inference capabilities to the database system by encapsulating the knowledge of the application domain within the database Knowledge is the most

valuable of all corporate resources that must be captured stored re used and continuously improved in much the same way as database systems were important in the previous decade Flexible extensible and yet efficient Knowledge Base Systems are needed to capture the increasing demand for knowledge based applications which will become a significant market in the next decade Knowledge can be expressed in many static and dynamic forms the most prominent being domain objects their relationships and their rules of evolution and transformation It is important to express and seamlessly use all types of knowledge in a single Knowledge Base System Parallel Object Oriented and Active Knowledge Base Systems presents in detail features that a Knowledge Base System should have in order to fulfill the above requirements Parallel Object Oriented and Active Knowledge Base Systems covers in detail the following topics Integration of deductive production and active rules in sequential database systems Integration and inter operation of multiple rule types into the same Knowledge Base System Parallel rule matching and execution for deductive production and active rules in parallel Export Knowledge Base and Database Systems In depth description of a Parallel Object Oriented and Active Knowledge Base System that integrates all rule paradigms into a single database system without hindering performance Parallel Object Oriented and Active Knowledge Base Systems is intended as a graduate level text for a course on Knowledge Base Systems and as a reference for researchers and practitioners in the areas of database systems knowledge base systems and Artificial Intelligence

Deductive and Object-Oriented Databases W. Kim,J.-M. Nicolas,S. Nishio,2014-06-28 Deductive databases and object oriented databases are at the forefront of research in next generation intelligent database systems Object oriented programming and design methodologies have great potential promising to reduce the complexity of very large software systems in such domains as computer aided design and manufacturing integrated office information systems and artificial intelligence Object oriented database systems will enhance the programmer user productivity of such systems Research into deductive databases is aimed at discovering efficient schemes to uniformly represent assertions and deductive rules and to respond to highly expressive queries against the knowledge base of assertions and rules This area of research is strongly interacting with Logic Programming which has developed in parallel sharing Logic as a common basis Recently research has aimed at integrating the object oriented paradigm and rule based deduction to provide a single powerful framework for intelligent database systems The aim of this book is to present research papers and technical discussions between researchers concerned with deductive databases object oriented databases and their integration
