Dynamic systems theory and embodiment in psychotherapy research. A new look at process and outcome Sergio Salvatore, Wolfgang Tschacher, Omar Carlo Gioacchino Gelo, Sabine C Koch, 2016-04-11 In an attempt to cease from reducing the world and its emergent phenomena to linear modeling and analytic dissection Dynamic Systems Theories DST and Embodiment theories and methods aim at accounting for the complex dynamic and non linear phenomena that we constantly deal with in psychology For instance DST and Embodiment can enrich psychology s understanding of the communicative

process both in clinical and non clinical settings In psychotherapy an important amount of research has shown that next to other ingredients the therapeutic relationship is the most important active factor contributing to psychotherapy outcome These findings give communication a central role in the psychotherapy process In the traditional view the underlying model of understanding psychotherapy processes is that of a number of components summatively coming together enabling us to make a linear causal prediction Yet communication is inherently dynamic A shift to viewing the communication process in psychotherapy as a field dynamic phenomenon helps us to take into account nonlinear phenomena such as feedback processes within and between persons We thus propose an embodied enactive dynamic systems view as a new theoretical and methodological perspective that can more realistically capture what happens among and between two persons in psychotherapy This view reaches beyond the current narrow model of psychotherapy research DST and Embodied Enactive Approaches can offer solutions to the loss of non linear phenomena the complex dynamics of reality and the holistic level of analysis DST and Embodied Enactive Approaches have developed not in a single discipline but in a joined movement based on various fields such as physics biology robotics anthropology philosophy linguistics neuroscience and psychology and have only recently entered clinical theorizing The two new paradigms have already triggered a rethinking of the therapeutic exchange by recognizing the embodied nature of psychological and communicative phenomena Their integration opens up a promising scenario in the field of psychotherapy research developing new profoundly transdisciplinary theoretical concepts methodologies and standards of knowledge The notion of field dynamics enables us to account for the role of the communicational context in the regulation of intra psychological processes while at the same time avoiding the pitfalls of an ontologization of the hierarchy of systemic organization Moreover the new approach implements methodological strategies that can transcend the conventional opposition between idiographic and nomothetic sciences

Overcoming Psychologism: Husserl and the Transcendental Reform of Psychology Larry Davidson, 2020-11-21 This book shows us how rather than abandoning psychology once he liberated phenomenology from the psychologism of the philosophy of arithmetic Edmund Husserl remained concerned with the ways in which phenomenology held important implications for a radical reform of psychology throughout his intellectual career The author fleshes out what such a radical reform actually entails and proposes that it can only be accomplished by following the trail of the transcendental reduction described in Husserl's later works In order to appreciate the need for the transcendental even for psychology the book tracks Husserl's thinking on the nature of this relationship between phenomenology as a philosophy and psychology as a positive science as it evolved over time The text covers Husserl's definition of phenomenology as descriptive psychology in the *Logical Investigations* rejecting the hybrid form of phenomenological psychology described in the lectures by that name and ends with his proposal for a fundamental refashioning of psychology by situating it within the transcendental framework of *The Crisis of European Sciences and Transcendental Phenomenology* The Author argues for a re-grounding of psychology by virtue of a return to positivity after having performed the reduction to transcendental intersubjectivity What results is a phenomenological approach to a transcendently grounded psychology which while having returned to the life world no longer remains transcendently naïve A phenomenologically grounded psychology thus empowers researchers clinicians and clients alike to engage in social actions that move the world closer to achieving social justice for all This text appeals to students and researchers working in phenomenology and psychology
