Haubold, 2005-12-28 J Andersen Niels Bohr Institute for Astronomy Physics and Geophysics Astronomical Observatory Copenhagen ja astro ku dk The development of astronomy worldwide begins at the roots Already from childhood humans of all nations and civilizations seem to share an innate fascination with the sky Yet people in different regions of the world have vastly different possibilities

for pursuing this interest In wealthy industrialised societies the way is open to a school or higher education in science possibly leading to a career in astronomy or basic or applied space science for the benefit of the country as well as the individual In other regions neither the financial nor the trained human resources are sufficient to offer that avenue to the future of the young generation or those intellectual resources to the development of their country This book addresses ways and means by which these obstacles can be if not fully overcome then at least significantly reduced Space Science in China Wen-Rui Hu,1997-08-20 Space science in China is one of the most active areas in modern science and China has played a dynamic and steadily increasing role in this field since the 1960s Until recently however activity in China was a mystery to the rest of the world With the commercial importance of space and the fact that space is now used as a laboratory to carry out various experiments China has recently emerged as an important international competitor Space Science in China provides a clear understanding of the latest research and progress in such wide ranging areas as the development and research in solar terrestrial science space astronomy geoscience remote sensing microgravity science and life science
