Trigiante,1988-05-01 In this book we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems A number of computing techniques are considered such as methods of operator approximation with any given accuracy operator interpolation techniques including a non Lagrange interpolation methods of system representation subject to constraints associated with concepts of causality memory and stationarity methods of system representation with an accuracy that is the best within a given class of models methods of covariance matrix estimation methods for low rank matrix approximations hybrid methods based on a combination of iterative procedures and best operator approximation and methods for information compression and filtering under condition that a filter model should satisfy restrictions associated with causality and different types of memory As a result the book represents a blend of new methods in general computational analysis and specific but also generic techniques for study of systems theory ant its particular branches such as optimal filtering and information compression Best operator approximation Non Lagrange

interpolation Generic Karhunen Loeve transform Generalised low rank matrix approximation Optimal data compression Optimal nonlinear filtering **Finite Difference Methods. Theory and Applications** Ivan Dimov,István Faragó,Lubin Vulkov,2019-01-28 This book constitutes the refereed conference proceedings of the 7th International Conference on Finite Difference Methods FDM 2018 held in Lozenetz Bulgaria in June 2018 The 69 revised full papers presented together with 11 invited papers were carefully reviewed and selected from 94 submissions They deal with many modern and new numerical techniques like splitting techniques Green s function method multigrid methods and immersed interface method

Introduction to Difference Equations Samuel Goldberg,1986-01-01 Exceptionally clear exposition of an important mathematical discipline and its applications to sociology economics and psychology Topics include calculus of finite differences difference equations matrix methods and more 1958 edition **An Introduction to the Theory and Practice of Plain and Spherical Trigonometry** Thomas Keith,1826 **Difference Equations with Applications to Queues** David L. Jagerman,2000-08-22 Presents a theory of difference and functional equations with continuous argument based on a generalization of the Riemann integral introduced by N E Norlund allowing differentiation with respect to the independent variable and permitting greater flexibility in constructing solutions and approximations Discusses linear transformations that state conditions for convergence of Newton series and Norlund sums Basic Modern Theory of Linear Complex Analytic q -Difference Equations Jacques Sauloy,2024-11-06 The roots of the modern theories of differential and q difference equations go back in part to an article by George D Birkhoff published in 1913 dealing with the three sister theories of differential difference and q difference equations This book is about q difference equations and focuses on techniques inspired by differential equations in line with Birkhoff s work as revived over the last three decades It follows the approach of the Ramis school mixing algebraic and analytic methods While it uses some q calculus and is illustrated by q special functions these are not its main subjects After a gentle historical introduction with emphasis on mathematics and a thorough study of basic problems such as elementary q functions elementary q calculus and low order equations a detailed algebraic and analytic study of scalar equations is followed by the usual process of transforming them into systems and back again The structural algebraic and analytic properties of systems are then described using q difference modules Newton polygon filtration by the slopes The final chapters deal with Fuchsian and irregular equations and systems including their resolution classification Riemann Hilbert correspondence and Galois theory Nine appendices complete the book and aim to help the reader by providing some fundamental yet not universally taught facts There are 535 exercises of various styles and levels of difficulty The main prerequisites are general algebra and analysis as taught in the first three years of university The book will be of interest to expert and non expert researchers as well as graduate students in mathematics and physics **Different Forms of Triangular Neutrosophic Numbers, De-Neutrosophication Techniques, and their Applications** Avishek Chakraborty,Sankar Prasad Mondal,Ali Ahmadian,Norazak Senu,Shariful Alam,Soheil Salahshour, In this paper we introduce

the concept of neutrosophic number from different viewpoints We define different types of linear and non linear generalized triangular neutrosophic numbers which are very important for uncertainty theory We introduced the de neutrosophication concept for neutrosophic number for triangular neutrosophic numbers This concept helps us to convert a neutrosophic number into a crisp number The concepts are followed by two application namely in imprecise project evaluation review technique and route selection problem

An Introduction to Electromagnetic Theory P. C. Clemmow,1973-10-25 First published in 1973 Dr Clemmow s Introduction to Electromagnetic Theory provides a crisp and selective account of the subject It concentrates on field theory with the early development of Maxwell s equations and omits extended descriptions of experimental phenomena and technical applications though without losing sight of the practical nature of the subject Rationalized mks units are used and an awareness of orders of magnitude is fostered Fields in media are discussed from both the macroscopic and microscopic points of view As befits a

mainly theoretical treatment a knowledge of vector algebra and vector calculus is assumed the standard results required being summarized in an appendix Other comparatively advanced mathematical techniques such as tensors and those involving Legendre or Bessel functions are avoided Problems for solution some 180 in all are given at the end of each chapter

Generalized Difference Methods for Differential Equations Ronghua Li, Zhongying Chen, Wei Wu, 2000-01-03 This text presents a comprehensive mathematical theory for elliptic parabolic and hyperbolic differential equations It compares finite element and finite difference methods and illustrates applications of generalized difference methods to elastic bodies electromagnetic fields underground water pollution and coupled sound heat flows

Inequalities for Finite Difference Equations B.G. Different Aspects of Coding Theory Robert Calderbank, 1995 The symposia in applied mathematics have been held under the auspices of the American Mathematical Society and others since 1967 This book connects coding theory with actual applications in consumer electronics and with other areas of mathematics It covers in detail the mathematical foundations of digital data storage and makes connections to symbolic dynamics linear systems and finite automata It also explores the use of algebraic geometry within coding theory and examines links with finite geometry statistics and theoretical computer science

Nonstandard Finite Difference Schemes: Methodology And Applications Ronald E Mickens, 2020-11-11 This second edition of *Nonstandard Finite Difference Models of Differential Equations* provides an update on the progress made in both the theory and application of the NSFD methodology during the past two and a half decades In addition to discussing details related to the determination of the denominator functions and the nonlocal discrete representations of functions of dependent variables we include many examples illustrating just how this should be done Of real value to the reader is the inclusion of a chapter listing many exact difference schemes and a chapter giving NSFD schemes from the research literature The book emphasizes the critical roles played by the principle of dynamic consistency and the use of sub equations for the construction of valid NSFD discretizations of differential equations
