Introduction to Wine Laboratory Practices and Procedures Jean L. Jacobson, 2006-06-14 In the beginning for me winemaking was a romanticized notion of putting grape juice into a barrel and allowing time to perform its magic as you sat on the veranda watching the sunset on a Tuscan landscape For some small wineries this notion might still ring true but for the majority of wineries commercially producing quality wines the reality of winemaking is far more complex The persistent evolution of the wine industry demands continual advancements in technology and education to sustain and promote quality winemaking The sciences of viticulture enology and wine chemistry are becoming more intricate and sophisticated each year Wine laboratories have become an integral part of the winemaking process necessitating a knowledgeable staff possessing a multitude of skills Science incorporates the tools that new age winemakers are utilizing to produce some of the best wines ever made in this multibillion dollar trade A novice to enology and wine chemistry can find these subjects daunting and intimidating Whether you are a home winemaker a new winemaker an enology student or a beginning to intermediate laboratory technician putting all the pieces together can take time As a winemaker friend once told me winemaking is a moving target *Introduction to Wine Laboratory Practices and Procedures* was written for the multitude of people entering the wine industry and those that wish to learn about wine chemistry and enology

Introductory Science of Alcoholic Beverages Masaru Kuno, 2022-11-14 *Introductory Science of Alcoholic Beverages* provides readers an engaging introduction to the science behind beer wine and spirits It illustrates not only the chemical principles that underlie what alcoholic beverages are why they are the way they are and what they contain but also frames them within the context of historical and societal developments Discussed chapter topics include introductions to beer wine and spirits the principles behind fermentation and distillation and overviews of how each beverage class is made The chapters highlight the unique chemistries that lend beer wine and spirits their individuality as well as the key chemicals that impart their characteristic aroma and flavor profiles This book goes beyond focused descriptions of individual alcoholic beverages by summarizing their common chemical lineage and illuminating the universal scientific principles that underpin them It will be of interest to students of physics and chemistry as well as enthusiasts and connoisseurs of beer wine and spirits

Wine Faults and Flaws Keith Grainger, 2021-05-04 2022 Winner of the OIV Award in the Oenology category An essential guide to the faults and flaws that can affect wine Written by the award winning wine expert Keith Grainger this book provides a detailed examination and explanation of the causes and impact of the faults flaws and taints that may affect wine Each fault is discussed using the following criteria what it is how it can be detected by sensory or laboratory analysis what the cause is how it might be prevented whether an affected wine is treatable and if so how and the science applicable to the fault The incidences of faulty wines reaching the consumer are greater than would be regarded as acceptable in most other industries It is claimed that occurrences are less common today than in recent recorded history and it is true that the frequency of some faults and taints

being encountered in bottle has declined in the last decade or two However incidences of certain faults and taints have increased and issues that were once unheard of now affect many wines offered for sale These include reduced aromas premature oxidation atypical ageing and very much on the rise smoke taint This book will prove invaluable to winemakers wine technologists and quality control professionals Wine critics writers educators and sommeliers will also find the topics highly relevant The wine loving consumer including wine collectors will also find the book a great resource and the basis for discussion at tastings with like minded associates Reviews I read this book avidly from cover to cover I ll dip into it for future reference as required which is how many will employ it Meanwhile I learned a great deal and it now influences how I think about wine evaluation I commend this excellent new book to you Consider it an investment Paul Howard Wine Alchemy

Science and Technology of Fruit Wine Production Maria R. Kosseva,V.K. Joshi,P.S. Panesar,2016-11-01 Science and Technology of Fruit Wine Production includes introductory chapters on the production of wine from fruits other than grapes including their composition chemistry role quality of raw material medicinal values quality factors bioreactor technology production optimization standardization preservation and evaluation of different wines specialty wines and brandies Wine and its related products have been consumed since ancient times not only for stimulatory and healthful properties but also as an important adjunct to the human diet by increasing satisfaction and contributing to the relaxation necessary for proper digestion and absorption of food Most wines are produced from grapes throughout the world however fruits other than grapes including apple plum peach pear berries cherries currants apricot and many others can also be profitably utilized in the production of wines The major problems in wine production however arise from the difficulty in extracting the sugar from the pulp of some of the fruits or finding that the juices obtained lack in the requisite sugar contents have higher acidity more anthocyanins or have poor fermentability The book demonstrates that the application of enzymes in juice extraction bioreactor technology and biological de acidification MLF bacteria or de acidifying yeast like schizosaccharomyces pombe and others in wine production from non grape fruits needs serious consideration Focuses on producing non grape wines highlighting their flavor taste and other quality attributes including their antioxidant properties Provides a single volume resource that consolidates the research findings and developed technology employed to make wines from non grape fruits Explores options for reducing post harvest losses which are especially high in developing countries Stimulates research and development efforts in non grape wines
