

Climatology: An Introduction to the Theory of Climate

Topic: Sciences | Words: 284 | Pages: 2

By definition, climatology denotes the study of climate. Climate for its part refers to a set of weather conditions that characterize a given location (Monin, 1986). With these definitions in mind, theories of climatology refer to the ideas that attempt to explain some climatic phenomena. There are two well known theories in the field of climatology, which try to explain the global warming phenomenon. These include the Greenhouse Gas Effect Theory and the Theory of Cosmoclimatology. This essay is a summary of the latter.

Henrik Svensmark postulated the theory in 1995. It states that, if a higher magnitude of cosmic rays reaches the lower atmosphere, it becomes cloudier (Svensmark, 2007). Alternatively, if the magnitude of cosmic rays that reach the atmosphere is lower, cloud cover reduces (Svensmark, 2007). The first scenario implies that the increase in cloud cover causes a cooling effect in the atmosphere thereby lowering global temperatures. Similarly, a reduction in cosmic rays that reach the lower atmosphere and the subsequent reduction in cloud cover lead to higher atmospheric temperatures, which result in global warming. The cosmic ray count that reaches the atmosphere is regulated by the sun's magnetic field (Svensmark, 2007). Variations in the earth's magnetic flux either lower or increase the magnitude of cosmic rays reaching the atmosphere. At low altitudes of about three kilometers above the earth's surface, cosmic rays cause increased ionization of the air in the atmosphere (Svensmark, 2007). In so doing, they release electrons, which catalyze the formation of particles that act as core basic elements of cloud nuclei. With the nuclei already formed, tiny water

The Routledge Handbook of Non-Ideal Theory Hilkje C. Hänel, Johanna M. Müller, 2024-10-15 Made popular by John Rawls ideal theory in political philosophy is concerned with putting preferences and interests to one side to achieve an impartial consensus and to arrive at a just society for all In recent years ideal theory has drawn increasing criticism for its idealised picture of political philosophy and its inability to account for the challenges posed by inequalities of for example race gender and class and by structural injustices stemming from colonialism and imperialism The Routledge Handbook of Non Ideal Theory is the first handbook or reference source on this important and fast growing debate Comprised of 34 chapters by an international team of contributors the Handbook is divided into three clear parts Methodological Challenges Intersections Applied Issues and Contemporary Challenges Within these sections key topics are addressed including the question of whether non ideal theory is methodologically linked to ideal theory its intersection with feminist philosophy critical race theory decolonial theory and critical theory its characteristic features the role of the non ideal theorist its relation to activism and its application in the context of disability and health studies climate justice global injustices colonialism and many more As well as a comprehensive introduction which provides important background to the debate between ideal and non ideal theory the Handbook also features a contribution by the late philosopher Charles Mills on non ideal theory as ideology The Routledge Handbook of Non Ideal Theory is essential reading for students and scholars of political philosophy ethics and political theory and will also be of interest to those studying and researching related subjects

such as gender race and social justice *Discovering Sociology* Mark McCormack, Eric Anderson, Kimberly Jamie, Matthew David, 2021-02-14 This second edition of a major textbook uses lively prose and a series of carefully crafted pedagogical features to both introduce sociology as a discipline and to help students realize how deeply sociological issues impact on their own lives Over the book's 12 chapters students discover what sociology is alongside its historical development and emergent new concerns They will be led through the theories that underpin the discipline and familiarized with what it takes to undertake good sociological research Ultimately students will be led and inspired to develop their own sociological imagination learning to question their own assumptions about the society the culture and the world around them today Historically the majority of introductory sociology textbooks have run to many hundreds of pages discouraging students from further reading By contrast *Discovering Sociology* has been carefully designed and developed as a true introduction covering the key ideas and topics that first year undergraduate students need to engage with without sacrificing intellectual rigour New to this Edition Two new chapters adding coverage on crime deviance and political sociology Updated examples Vox Pops and case studies keep this new edition feeling fresh and contemporary and ensure diverse coverage including from beyond Western sociology Thoughtfully updated and refreshed layout and visual features Accompanying online resources for this title can be found at bloomsburyonlineresources.com/discovering-sociology-2e These resources are designed to support teaching and learning when using this textbook and are available at no extra cost **Community Action and Climate Change** Jennifer Kent, 2015-11-19 The failure of recent international negotiations to progress global action on climate change has shifted attention to the emergence of grassroots sustainability initiatives These civil society networks display the potential to implement social innovation and change processes from the bottom up Recent scholarship has sought to theorise grassroots community based low carbon practices in terms of their sustainability transition potential However there are few empirical examples that demonstrate the factors for success of community based social innovations in achieving more widespread adoption outside of their local sustainability niche The book seeks to address two significant gaps related to grassroots climate action firstly the continuing dominance of the individualisation of responsibility for climate change action which presupposes that individuals hold both the ability and desire to shift their behaviours and lifestyle choices to align with a low carbon future Secondly the potential for community based collectives to influence mainstream climate change governance an area significantly under researched Drawing on empirical research into Australian Climate Action Groups CAGs and related international research the book argues that grassroots community based collective action on climate change holds the key to broader social change This book will be of great interest to students and scholars of climate change citizen participation environmental sociology and sustainable development **The Anthropology of Climate Change** Hans Baer, Merrill Singer, 2014-04-24 In addressing the urgent questions raised by climate change this book provides a comprehensive overview of the anthropology of climate change guided by a critical political ecological framework It argues

that anthropologists must significantly expand their focus on climate change and their contributions to responding to climate change as a grave risk to humanity The book presents a human socioecological framework for conceptualizing climate change It examines the emergence and slow maturation of the anthropology of climate change reviews the historic foundations for this work in the archaeology of climate change and presents three alternative contemporary theoretical perspectives in the anthropology of climate change The book synthesizes anthropological work and perspectives on climate change in the form of case studies in various regions of the world revealing the nature of global climate change as constituting multiple and somewhat diverse changes in local settings It explores the applied anthropology of climate change in terms of the ways anthropologists are contributing to climate policy working with communities on climate change issues as well as within the climate movement both internationally and nationally Finally it provides an overview of what other the social sciences are saying about climate change and explores ways that the anthropology of climate change can interface with sociology political science and human geography in order to create an integrated social science of climate change This book gives researchers and students in Environmental Anthropology Climate Change Human Geography and Sociology a novel framework for understanding climate change that emphasizes human socioecological interactions
