Vernon Truter,1973 **Wellington Sears Handbook of Industrial Textiles** Sabit Adanur,1995-10-06 The Wellington Sears Handbook of Industrial Textiles has been a widely used textile industry reference for more than 50 years Now a completely updated new edition has been published It was prepared by a team of industrial textile specialists at Auburn University to provide both technical and management personnel with a comprehensive resource on the current technology and applications of today s industrial textiles All aspects of industrial textiles are covered man made and natural materials manufacturing and finishing methods and all applications There are also sections on properties testing waste management computers and automation and standards and regulations The appendices provide extensive reference data properties specifications manufacturers and trade names mathematical equations and measurement units The text is organized for easy reference and well illustrated with hundreds of schematics and photographs

Chemistry of Natural Protein Fibers R. S. Asquith,2012-12-06 This volume arose originally from the complaints of the editor s students both undergraduate and postgraduate that there was no modern book on protein fibers which told enough about protein science and chemical tech nologies related to fibers By and large this is probably a reasonable cri de coeur The undergraduate on a technological course lacking information on the basic scientific techniques used to carry out the research on which his fiber technology is based can find it difficult to obtain this information The pure science undergraduate often lacks knowledge of the application of these techniques in protein fiber technology The young graduates com mencing research related to some aspect of protein fibers are drawn from a wide range of scientific disciplines having been trained as biochemists chemists physicists technologists and histologists to name but a few Generally these new research workers pass through a preliminary lost period in which they have to evaluate their background in relation to the wide and differing fields of research in protein fiber science to which they are now exposed As time goes on they then either develop a wide knowledge covering science and technology or remain in a specific part of their original discipline with a narrow knowledge of its application in the field of the research degree they are taking

Karmakar,1999-11-02 Textile chemical processing today particularly the pre treatment processes require a highly sophisticated technology and engineering to achieve the well known concepts of Right first time Right everytime and Right on time processing and production Chemical pre treatment may be broadly defined as a procedure mainly concerned with the removal of natural as well as added impurities in fabric to a level necessary for good whiteness and absorbency by utilising minimum time energy and chemicals as well as water This book discusses the fundamental aspects of chemistry chemical technology and machineries involved in the various pre treatment process of textiles before subsequent dyeing printing and finishing With the introduction of newer fibres specialty chemicals improved technology and sophisticated machineries developed during the last decade this book fills a gap in this area of technology However its real strength is its clear perception of ample background description which will enable readers to understand most current journals thus staying abreast of the latest advances in the field **Sustainable Fibres for Fashion Industry** Subramanian Senthilkannan Muthu,Miguel Angel Gardetti,2016-04-22 This book covers all sustainable fibres applicable in the fashion sector It addresses the importance of these fibres in the fashion sector with the context of sustainability This book the first of its kind addresses all the minute details pertaining to these fibres and connects these fibres with the world of sustainable fashion It stresses the importance of having these fibres on board in developing sustainable apparels as fibres play a major role as the starting point in the life cycle of apparel Physico-chemical Aspects of Textile Coloration Stephen M. Burkinshaw,2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry

involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration *Academic American Encyclopedia*, 1986 A twenty one volume encyclopedia with 32 000 entries and more than 16 000 illustrations

Fundamentals of Fiber Science Xiangwu Zhang, 2014-01-13 Connects fiber chemistry and structure to properties that can be designed and engineered Micro and nanoscale synthetic and natural polymer and non polymer fibers explained with applications to industrial electronic biomedical and energy Information pertinent for fiber textile composite polymer and materials specialists This volume provides the basic chemical and mathematical theory needed to understand and modify the connections among the structure formation and properties of many different types of manmade and natural fibers At a fundamental level it explains how polymeric and non polymeric fibers are organized how such fibers are formed both synthetically and biologically and how primary and secondary properties from basic flow to thermal and electrical qualities are derived from molecular and submolecular organization thus establishing the quantitative and predictive relationships needed for fiber engineering The book goes on to show how fiber chemistry and modes of processing for dozens of materials such as silks ceramics glass and carbon can be used to control functional optical conductive thermal and other properties Its discussion ranges over microscale and nanoscale fibers nanofibers covering methods such as spinning and electrospinning as well as biological fiber generation through self assembly Technologies in this text apply to the analysis and design of fibers for industrial electronic optical medical and energy storage applications

Renewable Bioresources Christian Stevens, Roland Verhé, 2004-11-19 Renewable Bioresources scope and modification for non food applications is the first text to consider the broad concept of renewable materials from the socio economic aspects through to the chemical production and technical aspects of treating different raw products The text sets the context of the renewables debate with key opening chapters on green chemistry and the current situation of US and EU policy regarding sustainability and industrial waste The quantitative and technical scope and production of renewable resources is then discussed with material looking at integral valorisation the primary production of raw materials downstream processing and the identification of renewable crop
