A Functional Biology of Parasitism G.W. Esch, J.C. Fernandez, 2013-03-07 Series Editor Peter Calow Department of Zoology University of Sheffield England The main aim of this series will be to illustrate and to explain the way organisms make a living in nature At the heart of this their functional biology is the way organisms acquire and then make use of resources in metabolism movement growth reproduction and so on These processes will form the fundamental framework of all the books in the series Each book will concentrate on a particular taxon species family class or even phylum and will bring together information on the form physiology ecology and evolutionary biology of the group The aim will be not only to describe how organisms work but also to consider why they have come to work in that way By concentration on taxa which are well known it is hoped that the series will not only illustrate the success of selection but also show the constraints imposed upon it by the physiological morphological and developmental limitations of the groups Another important feature of the series will be its organismic orientation Each book will emphasize the importance of functional integration in the day to day lives and the evolution of organisms This is crucial since though it may be true that organisms can be considered as collections of gene determined traits they nevertheless interact with their environment as integrated wholes and it is in this context that individual traits have been subjected to natural selection and have evolved      *Handbook of Helminthiasis for Public Health* D. W. T. Crompton, Lorenzo Savioli, 2006-08-18 Written by internationally respected experts Handbook of Human Helminthiasis provides information essential in the development of an integrated approach to the prevention control and treatment of disease caused by endoparasitic helminths The text is divided into sections dealing with the main groups of helminth infections and the diseases they i      *Parasites and Infectious Disease* Gerald Esch, 2007-05-31 Engaging introduction to the key discoveries that have shaped the field of parasitology      **Handbook of Animal Diversity** Richard E. Blackwelder, 2019-08-08 This book is a summary of the diversity between and within the classes of animals It is intended for reference on all aspects of animals that can be studied comparatively but such comparisons requires that the occurrence of the feature in question be known for more than just one or two groups It is in large part a book on invertebrate animals because the vertebrates form only a small part of the diversity of animals      *Foundations of Wildlife Diseases* Richard G. Botzler, Richard N. Brown, 2014-08-12 Foundations of Wildlife Diseases is a comprehensive overview of the basic principles that govern the study of wildlife diseases The authors integrate theoretical foundations with a thorough examination of the factors that can affect the health and fitness of animals They include specific information on a wide array of infectious agents such as bacteria viruses arthropods fungi protista and helminths as well as immunity to these agents Also provided is a

foundation for the study of noninfectious diseases cancers and prion diseases that affect wildlife Supporting students faculty and researchers in areas related to wildlife management biology and veterinary sciences this volume fills an important gap in wildlife disease resources focusing on mammalian and avian wildlife while also considering reptiles and amphibians Foundations of Wildlife Diseases provides students with a structure for thinking about and understanding infective agents and their interactions with wildlife Each chapter includes an outline select definitions and concepts an overview and summary and literature cited

Agents of Apocalypse Ken De Bevoise, 1995-01-03 As waves of epidemic disease swept the Philippines in the late nineteenth century some colonial physicians began to fear that the indigenous population would be wiped out Many Filipinos interpreted the contagions as a harbinger of the Biblical Apocalypse Though the direct forebodings went unfulfilled Philippine morbidity and mortality rates were the world s highest during the period 1883 1903 In Agents of Apocalypse Ken De Bevoise shows that those mourning years resulted from a conjunction of demographic economic technological cultural and political processes that had been building for centuries The story is one of unintended consequences fraught with tragic irony De Bevoise uses the Philippine case study to explore the extent to which humans participate in creating their epidemics Interpreting the archival record with conceptual guidance from the health sciences he sets tropical disease in a historical framework that views people as interacting with rather than acting within their total environment The complexity of cause effect and agency structure relationships is thereby highlighted Readers from fields as diverse as Spanish American and Philippine history medical anthropology colonialism international relations Asian studies and ecology will benefit from De Bevoise s insights into the interdynamics of historical processes that connect humans and their diseases
