Introduction to Quantitative Genetics in Forestry Gene Namkoong, 1979 **Forest Genetics** Timothy L. White, W. T. Adams, David B. Neale, 2007 This book which contains 20 chapters integrates the varied subdisciplines of genetics and their applications in gene conservation tree improvement and biotechnology Topics covered include genetic variation in natural forests the application of genetics in tree improvement and breeding programmes and genomic sequences and molecular technologies This book will be a valuable resource for students scientists and professionals in the plant sciences especially forest geneticists tree breeders forest managers and other natural resource specialists **USDA Forest Service General Technical Report INT.** , 1980 **Forest Genetics and Sustainability** Csaba Mátyás, 2013-11-11 During the 4th International Consultation on Forest Genetics and Tree Building held in 1998 in Beijing China leading scientists were invited to review past achievements to redefine the role of forest genetics and breeding in contemporary forestry and to set priorities for future research and development On the basis of the invited presentations the volume summarizes the state of knowledge in various fields such as the impact of forest management and of changing environmental conditions on genetic resources and the value of genetic markers as indicators for adaptational potential as well as the tasks of conservation Detailed reports from the different continents provide a comprehensive diagnosis of the global situation of forest genetics and tree breeding research The book offers not only an overview of contemporary trends and expected future developments but also identifies current main problems in funding and cooperation It may prove therefore useful not only for scientists university lecturers and advanced students in the field of forestry ecology and conservation biology but also for decision makers and managers in companies and conservation organizations , Research Paper NE. , 1985 *General Technical Report PNW-GTR* , 1997

Tropical Forest Genetics Reiner Finkeldey, Hans Heinrich Hattmer, 2006-11-22 This book is intended to provide information on fundamental genetic processes in tropical forests It is based on lecture notes by the authors prepared for postgraduate students mainly from tropical countries of the M Sc course Tropical and International Forestry at the Faculty of Forest Sciences and Forest Ecology Georg August University Göttingen Germany The intended readership is scientists researchers and practitioners interested in the genetic variation of species in particular forest trees living in complex forest ecosystems in the tropics Particular emphasis is placed on the human impact on forest genetic resources in the tropics Readers should be familiar with basics of classical and molecular genetics such as the structure and function of DNA double helix structure replication polypeptide synthesis transcription and translation and the transmission of genetic information

during sexual reproduction Mendel's rules. This knowledge is easily available from recently published genetics textbooks we recommend the book by Griffiths et al 2000. The development of biochemical and molecular marker techniques and their application to species of tropical forests have greatly improved our knowledge of genetic variation patterns of wild plants in the tropics during the last two decades. Many examples in this book are based on gene marker techniques.

Durability of Disease Resistance Th. Jacobs, Jan E. Parlevliet, 2012-02-02. From February 24-28, 1992, an international symposium on Durability of Disease Resistance was held at the International Agricultural Centre in Wageningen, the Netherlands. The symposium organized by the Department of Plant Breeding of Wageningen Agricultural University and the Centre for Plant Breeding and Reproduction Research (CPRO-DLO) was part of the DGIS funded programme Durable Resistance in Developing Countries. Without any form of prevention or protection, nearly all crops will be seriously or even severely damaged by a range of pathogens. In modern agriculture, man has been able to control many, if not most, pathogens using i) pesticides, ii) phytosanitary methods such as control of seed and plant material in order to start a crop disease-free, iii) agronomic measures such as crop rotation, iv) disease resistance, or combinations of these measures. Over the years, the use of pesticides has increased enormously, and so did the problems associated with pesticide use, such as environmental pollution and building of resistance and tolerance to these pesticides in the pathogens. The use of resistance too increased strongly over the years, and here too problems arose.

Genetics of Scots Pine M. Giertych, C. Mátyás, 2017-01-31. Since the Scots pine species is most important in Eurasia, it was considered necessary to involve authors from as many countries as was possible, including Eastern Europe and U.S.S.R. During the 18th IUFRO World Congress in Ljubljana, Yugoslavia, in September 1986, details were worked out for the contents of this book. This book is a truly international effort prepared in the traditional IUFRO spirit of selfless co-operation. In all, 24 authors from 9 countries are involved. Each chapter was reviewed by two editors from two different countries.
