audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers and NGOs   Statistical Methods: The Geometric Approach David J. Saville,Graham R. Wood,2012-12-06 This book is a novel exposition of the traditional workhorses of statistics analysis of variance and regression The key feature is that these tools are viewed in their natural mathematical setting the geometry of finite dimensions The Authors To introduce ourselves Dave Saville is a practicing statistician working in agricultural research Graham Wood is a university lecturer involved in the teaching of statistical methods Each of us has worked for sixteen years in our current field Features of the Book People like pictures One picture can present a set of ideas at a glance while a series of pictures each building on the last can unify a wealth of ideas Such a series we present in this text by means of a systematic geometric approach to the presentation of the theory of basic statistical methods This approach fills the void between the traditional extremes of the cookbook approach and the matrix algebra approach providing an elementary but at the same time rigorous view of the subject It combines the virtues of the traditional methods while avoiding their vices
