*Global Factors in the Term Structure of Interest Rates* Mirko Abbritti, Mr. Salvatore Dell'Erba, Mr. Antonio Moreno, Mr. Sergio Sola, 2013-11-05 This paper introduces global factors within a FAVAR framework in an empirical affine term structure model We apply our method to a panel of international yield curves and show that global factors account for more than 80 percent of term premia in advanced economies In particular they tend to explain long term dynamics in yield curves as opposed to domestic factors which are instead more relevant to short run movements We uncover the key role for global curvature in shaping term premia dynamics We show that this novel factor precedes global economic and financial instability In particular it coincides with immediate expectations of permanent expansionary monetary policy during the recent crisis
