

## Chapter 6

### Experimental Design in Psychological Research

*Daniel J. Levitin*

#### 6.1 Introduction

Experimental design is a vast topic. As one thinks about the information derived from scientific studies, one confronts difficult issues in statistical theory and the limits of knowledge. In this chapter, we confine our discussion to a few of the most important issues in experimental design. This will enable students with no background in behavior research to critically evaluate psychological experiments, and to better understand the nature of empirical research in cognitive science.

Experimental psychology is a young science. The first laboratory of experimental psychology was established just over 100 years ago. Consequently, there are a great many mysteries about human behavior, perception, and performance that have not yet been solved. This makes it an exciting time to engage in psychological research—the field is young enough that there is still a great deal to do, and it is not difficult to think up interesting experiments. The goal of this chapter is to guide the reader in planning and implementing experiments, and in thinking about good experimental design.

A “good” experiment is one in which variables are carefully controlled or accounted for so that one can draw reasonable conclusions from the experiment’s outcome.

#### 6.2 The Goals of Scientific Research

Generally, scientific research has four goals:

1. Description of behavior
2. Prediction of behavior
3. Determination of the causes of behavior
4. Explanations of behavior

These goals apply to the physical sciences as well as to the behavioral and life sciences. In basic science, the researcher’s primary concern is not with applications for a given finding. The goal of basic research is to increase our understanding of how the world works, or how things came to be the way they are.

Describing behavior impartially is the foremost task of the descriptive study, and because this is never completely possible, one tries to document any

Levitin,2002 An anthology of core readings on cognitive psychology      Experimental Design in Psychological Research Allen Louis Edwards,1985      Experimental Psychology Frank J. McGuigan,1997 This book explores the field of experimental psychology from the standpoint of scientific methodology and methods of experimentation rather than from specific content areas There is a step by step process of effectively completing statistical analyses for major research designs used in behavioral research and emphasizes the mutual facilitation of pure and applied research and the wise application of effective research methods to benefit society Requires no previous background in statistics develops a broad perspective about where sound psychological research fits within areas of public interest as well as more generally within science This book gives special attention to ethics in human and animal research It discusses the use of computers in psychology from historical and contemporary perspectives and provides thorough guidance in the development of a research project from conception to written form      Experimental Design Roger E. Kirk,1995 This text provides the graduate student in experimental design with detailed coverage of the designs and techniques having the greatest potential use in behavioural research The emphasis of the text is on the logical rather than the mathematical basis of experimental design It explores the relationship between analysis of variance and regression analysis and describes all of the ANOVA experimental designs that are potentially useful in the behavioural sciences and education      *Experimental Psychology* Frank Joseph McGuigan,1993 This introduction to experimental psychology defines the field from the standpoint of methods of research rather than specific content areas Topics covered include ethics in human and animal research the use of computers in psychology and correlational research and experimental designs      **The Corsini Encyclopedia of Psychology and Behavioral Science, Volume 1** W. Report Experiments is the perfect textbook and guide to the often bewildering world of experimental design and statistics. It provides a complete map of the entire process beginning with how to get ideas about research, how to refine your research question and the actual design of the experiment leading on to statistical procedure and assistance with writing up of results. While many books look at the fundamentals of doing successful experiments and include good coverage of statistical techniques, this book very importantly considers the process in chronological order with specific attention given to effective design in the context of likely methods needed and expected results. Without full assessment of these aspects, the experience and results may not end up being as positive as one might have hoped. Ample coverage is then also provided of statistical data analysis, a hazardous journey in itself, and the reporting of findings with numerous examples and helpful tips of common downfalls throughout. Combining light humour, empathy with solid practical guidance to ensure a positive experience overall, *How to Design and Report Experiments* will be essential reading for students in psychology and those in cognate disciplines with an experimental focus or content in research methods courses.
