Lindenmann,W.-D. Schleuning,2013-06-29 Forty years of Interferon I wish to dedicate this short introduction to the memory of Alick Isaacs 1921 1967 and to that of Sir Christopher Andrewes 1896 1988 Let us go back more than 40 years In 1956 Isaacs was in charge of the Wodd Influenza Centre Andrewes was head of the division of bac teriology and virology and deputy director of the National Institute for Medical Research in London When researchers are faced with a seemingly new phenomenon ex planations are easy to come by These explanations fall into two broad categories the phenomenon in question is either due to something or to the lack of something I apologize for the primitive way in which I ex press this but I am going to give three examples scattered over 100 years of what I mean First example in 1880 the great French microbiologist Louis Pas teur was involved in work on chicken cholera He was struck by the following observation if a suitable chicken broth was inoculated with the bacterium the organism grew profusely and the liquid became tur bid If he now freed the fluid by sedimentation or filtration from the bulk of the organisms and re inoculated it with the same bacterium no growth occurred Journal of the National Cancer Institute ,1994 Each issue is packed with extensive news about important cancer related science policy politics and people Plus there are editorials and reviews by experts in the field book reviews and commentary on timely topics **Neuroimmunoendocrinology** J. Edwin Blalock,1997-01-01 The explosion of information on immuneneuroendocrine interactions has continued unabated since the first and second editions of this volume appeared in 1988 and 1992 This third revised and enlarged edition offers an authoritative update on the latest advances in knowledge of the molecular structural and cellular bases of bidirectional communication between the immune and neuroendocrine systems The eight invited chapters review current evidence that the immune system produces and responds to neuroendocrine peptide hormones and neurotransmitters that the nervous system produces and responds to cytokines that the immune system can regulate the neuroendocrine system and vice versa that the immune system is innervated and that the neuroendocrine and immune systems share a set of hormone and cytokine receptors All chapters and bibliographies from the second edition have been expanded to include the most recent literature in these areas In addition the text provides a new chapter which is the first to compare the three dimensional structures of cytokines and hormones complexed with their receptors As the only text to provide an up to the minute account of the cellular molecular and structural mechanisms of communication between the immune and neuroendocrine systems this well written volume will be of interest to many

scientists in the fields of immunology endocrinology physiology neuroscience and structural biology and will also be a valuable resource for clinicians      Cytokines in the Treatment of Infectious Diseases B.J. Kullberg, Jos W.M. van der Meer, 2012-12-06 Only recently a new range of agents has become available that are capable of stimulating and regulating host defense systems against microorganisms Interleukins interferons and haematopoietic growth factors are now being produced by the biotechnology industry and are being evaluated for clinical use in this area Cytokines in the Treatment of Infectious Diseases provides a unique up to date survey of this research area The use of cytokines in a series of groups of infectious diseases is discussed in twelve succinct chapters from model to clinical study written by twenty five expert authors from the world's key institutes in this area The book is aimed at microbiologists immunologists molecular biologists cell biologists and other scientific disciplines in the field of biotherapy It is required reading for physicians dealing with infectious diseases who wish to keep up to date with the developments in this field      **Current Catalog** National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965-70      *Microbiology* Edward Bittar, 1998-02-16 There is a need in small group teaching for a readable module that provides a balanced treatment of the four main areas of medical microbiology bacteriology mycology virology and parasitology It need not be encyclopedic in scope nor didactic but it should emphasise principles and concepts Any existing gaps in this type of presentation are of course left for the student to fill Some subject material has been excluded An example is a chapter on laboratory procedures including PCR for rapid bacterial and viral diagnosis The discussion of bacterial sexually transmitted diseases does not cover gonococcal infections This is not a serious matter because the tutor can assign the topic to the students Moreover we have reluctantly omitted a separate chapter on anaerobic bacteria The subject of nosocomial pathogens is touched upon but not in sufficient detail e.g. control These bacteria e.g. *S. aureus*, *E. coli* and *Pseudomonas* are found in hospitals and are resistant to disinfectants and antibiotics A new but serious problem is the emergence of resistance to antiviral agents Without question molecular biology owes more to the study of viruses than bacteria The fact remains however that effective therapy against most viral diseases is not yet available Perhaps one of the most dramatic examples of this situation is the fight against the AIDS virus and the search for a vaccine The public health challenge of AIDS remains formidable in spite of the recent encouraging results obtained with protease inhibitor therapy At the moment at least six receptors for HIV are known to be present in human cells One of them is the CCR5 receptor in the absence of which cells fail to get infected with the virus Drugs that can interrupt CCR5 binding sites on the virus envelope are being vigorously sought Thus Volume 9B gives a large place to HIV disease The last group of chapters highlight several features of microbiology which are also of clinical importance and heuristic value The chapter on fever of unknown origin provides fertile soil for problem based learning      **Cytokines, Part A** C. Bondy, D. LeRoith, 1997-04-18 Progress in molecular technology in recent years has caused an amazing growth of information about intercellular peptide messengers and their receptors The number of characterized interleukins for example numbered just

three six years ago and now there are at least 16 In addition the number of described neutrophilic peptides is around 30 and the number of receptors is ever increasing Because many of these new peptide ligands and receptors were identified by reverse genetic techniques the understanding of their biological roles falls behind the knowledge of their molecular structures However a new strain of functional studies has begun and animal models are developed allowing for further research into the biological roles of these messenger peptides and their receptors Cytokines the theme of this volume describes a group of proteins identified primarily within the immune and hematopoietic systems As many cytokines as possible are included along with their receptors providing the reader with a guide to an ever changing field of scientific research Oncoimmunology Laurence Zitvogel, Guido Kroemer, 2017-12-13 In this book leading experts in cancer immunotherapy join forces to provide a comprehensive guide that sets out the main principles of oncoimmunology and examines the latest advances and their implications for clinical practice focusing in particular on drugs with FDA EMA approvals and breakthrough status The aim is to deliver a landmark educational tool that will serve as the definitive reference for MD and PhD students while also meeting the needs of established researchers and healthcare professionals Immunotherapy based approaches are now inducing long lasting clinical responses across multiple histological types of neoplasia in previously difficult to treat metastatic cancers The future challenges for oncologists are to understand and exploit the cellular and molecular components of complex immune networks to optimize combinatorial regimens to avoid immune related side effects and to plan immunomonitoring studies for biomarker discovery The editors hope that this book will guide future and established health professionals toward the effective application of cancer immunology and immunotherapy and contribute significantly to further progress in the field **Antibodies in Cytokines** H. Schellekens, 2012-12-06 This book written by leading authors in the field is the first to deal with all aspects of cytokine antibodies from test methodology and standardization to biological consequences and functions It encompasses antibodies induced by cytokines used therapeutically and antiviral antibodies To understand the biology the effects of cytokine antibodies in experimental animal models and patients are also discussed The book is intended for researchers of cytokine biology pharmaceutical companies developing cytokines and cytokine antibodies as therapies and clinicians interested in modulating the immune system as therapy **Biological Response Modifiers — Interferons, Double-Stranded RNA and 2',5'-Oligoadenylates** W.E.G. Müller, H.C. Schröder, 2012-12-06 Biological response modifiers are increasingly used in viral and cancer therapy Since alterations of the immune system are the primary symptoms of HIV infection especially therapies directed towards the modulation of the immune response have been under intense evaluation This volume summarizes current knowledge of the interferon based natural antiviral protection system including 2'5' oligoadenylate and double stranded RNA It will also help to develop further a solid scientific rationale for the practical use of heterologous immunomodulators in the clinics **Growth Hormone Secretagogues in Clinical Practice** Barry B. Bercu, Richard F.

Walker,1998-04-28 Recognizing the urgent need for an up to date review of new and innovative research on growth hormone GH secretagogues this exclusive work furnishes the state of the art on the mechanisms of action design synthesis evaluation and clinical applications of GH secretagogues including orally active and xenobiotic GH releasing compounds Beginning with a thorough historical perspective on the discovery and evolution of GH releasing peptides GHRPs as therapeutic agents Growth Hormone Secretagogues in Clinical Practice analyzes structural requirements for GH secretagogue efficacy demonstrates the use of mathematical models to predict differential values of individual stimuli for GH secretion from the pituitary reports on the development of a simple screening system based on polyclonal antibodies discusses laboratory synthesis of agonistic analogs intended for human and veterinary use proposes applications in managing conditions such as Turner s syndrome acromegaly diabetic retinopathy glomerulosclerosis tumors and cancer provides physiological evidence for the effects of GHRP on behavior with a series of trials involving voluntary and forced exercise describes a new diagnostic test for evaluating pituitary function in slowly growing children and aging adults explores the interactions of GH secretagogues with other hormones and endogenous substances from sex steroids to interferons and much more

Jollow,Helmut Greim,Terrence J. Monks,Charlotte M. Witmer,2013-11-21 Much of organic chemistry is based on the ability of suitably structured chemicals to bind together through the formation of covalent bonds Biochemistry is replete with examples of enzymatically catalyzed reactions in which normal body constituents can be linked through covalent bonds during the process of intermediary metabolism The finding that xenobiotic chemicals that enter the body from the environment are metabolized to highly reactive species and then covalently react with cellular macromolecules to induce toxic and carcinogenic effects was an observation that spawned the research featured in the Fifth International Symposium on Biological Reactive Intermediates BRI V The group of investigators that became fascinated with this process and its significance in terms of human health began their discussions in Turku Finland J 975 and continued them at Guildford England 1980 College Park Maryland 1985 Tucson Arizona 1990 and Munich Germany 1995 Among the results were a series of reports listed below as well as the book for which this serves as the Preface Jollow DJ Kocsis J J Snyder R and Vainio H eds Biological Reactive Intermediates Formation Toxicity and Inactivation Plenum Press NY 1975 Snyder R Park D V Kocsis J J Jollow D V Gibson G G and Witmer C M eds Biological Reactive Intermediates II Chemical Mechanisms and Biological Effects Plenum Press N Y 1982 Medical Virology David O. White,Frank J. Fenner,1994-06-27 Medical Virology first appeared in 1970 and was immediately hailed as a classic The Fourth Edition has been completely updated substantially rewritten and considerably expanded Acknowledging that today s students possess a more sophisticated background of molecular and cellular biology the book is pitched a little higher than was the third edition Nevertheless it maintains the exceptionally high standards of the three previous editions including the now famous user friendly style Hundreds of instructive diagrams and

succinct tables smooth the path for the reader Extensive lists of recent authoritative reviews at the end of each of the 36 chapters simplifies the reader s entry into the scientific literature Throughout the focus is on fundamental principles mechanisms and basic facts rather than on overwhelming detail Part I of the book expanded to over 400 pages comprises in effect a self contained overview of the Principles of Virology Part II entitled Viruses of Humans deals comprehensively with all the families of human viruses Extensive coverage is given to the molecular biology of the viruses and of viral replication pathogenesis and immunity clinical features of all important diseases caused by all viruses affecting humans the latest laboratory diagnostic methods epidemiology and control including chemotherapy and vaccines This lucid and concise yet comprehensive text is admirably suited to the needs not only of advanced students of science and medicine but also particularly of postgraduate students teachers and research workers in all areas of virology Molecular biology of viruses and viral replication Pathogenesis and immunity Latest laboratory diagnostic methods Clinical features of human viral diseases Vaccines and chemotherapy Epidemiology and control
