positions three different ethos by critically approaching the architectural side of a cultural mutation that has been affecting the Western experimental areas of knowledge and practice since the end of the last century A transformative process constituted by a constellation of transdisciplinary manifestations accelerations turns shortcuts and clusterizations that by no means can be read under one single epistemological umbrella In this sense rather than approaching the practice of architecture focusing on its disciplinary inner specificity this book approaches the research of experimental architecture focusing on its extra disciplinary entanglements It argues that a vast multiplicity of fields of knowledge participates in a cultural endeavour modulated through three protocols forms of action that singularize three decades Conformative Protocols 1990 2000 Distributive Protocols 2000 2010 and Expansive Protocols 2010 2020 These three periods shouldn't be read as three hermetic and concatenated monades but as three different modulations of the same narrative that is as three overlapping and coexisting systems whose peaks of intensity occur in three different decades However the main purpose of this book is not limited to unveiling the ethos of these three conjugations It also aims at using this framework as a time field a narrative map that moves from the classificatory to the cartographical in order to vectorize the last 30 years of experimental architecture In this sense this book argues that this threefold set of protocols represents the progressive attempt to constitute critical interiorities looking for and produced through interactions that are increasingly more intimate and whose agents are increasingly more diverse A tendency oriented towards the consolidation of an intimacy between strangers that highly resonates with the cultural and technological landscape in which experimental architecture operates

 Animated interactive characters and robots that are able to function in human social environments are being developed by a large number of research groups worldwide Emotional expression as a key element of human social interaction and communication is often added in an attempt to make them appear more natural to us How can such artefacts be given emotional displays that are believable and acceptable to humans This is the central question of Animating Expressive Characters for Social Interaction The ability to express and recognize emotions is a fundamental aspect of social interaction Not only is it a central research question it has been explored in animated films dance and other expressive arts for a much longer period This book is unique in presenting a multi disciplinary approach to animation in its broadest sense from internal mechanisms to external displays not only from a graphical perspective but more generally examining how to give characters an anima so that they appear as life like entities and social partners to humans Series B
