Internally Sealed Concrete:

Internally Sealed Concrete Kenneth C. Clear, S. W. Forster, 1977 The work described herein was aimed at developing the information and processes necessary for efficient experimental construction of bridge decks using internally sealed concrete This concrete is sealed by means of wax included in the mix and was developed for use in bridge decks to prevent the penetration of water and chlorides to the reinforcing steel Specific goals of the study were 1 The development of safest efficient field heating systems needed to melt the wax and seal the concrete 2 The definition of the engineering properties of the particular internally sealed concrete specified for the experimental projects During the early testing phases concrete cracking problems were encountered and circumvented by modifying the heating and bead manufacturing processes Heating equipment experiments performed to develop both small single pass fast heating equipment and equipment which slowly heats a large area at once are described

Corrosion of Reinforcing Steel in Concrete D. Gaidis, 1984 Internally Sealed Concrete J. M. Butler, 1975 A process for internally sealing concrete was developed which prevents intrusion of chlorides and other corrosive compounds Small particles of an inert thermoplastic sealant added to the initial concrete mix are later triggered by warming to fuse and flow into the fissures and capillaries of the cured structure A low cost sealing additive was developed which fuses at moderate temperatures and at 2 1 2% concentration completely blocked chloride penetration through ninety days ponding with a 3% NaCl solution Particle shape was shown to affect the compressive strength of sealed concrete and a process was developed to produce additive spheres for maximum strength **Corrosion of Metals in Association with Concrete** John E.
