Special Issue on the International Conference of Computational Methods in Sciences and Engineering (ICCMSE 2004) ,2006 Excitation Energies and Properties of Open-Shell Singlet Molecules

Masayoshi Nakano,2014-08-02 This brief investigates the diradical character which is one of the ground state chemical indices for bond weakness or electron correlation and which allows researchers to explore the origins of the electron correlation driven physico chemical phenomena concerned with electronic optical and magnetic properties as well as to control them in the broad fields of physics and chemistry It then provides the theoretical fundamentals of ground and excited electronic structures of symmetric and asymmetric open shell molecular systems by using model molecular systems

Moreover it presents the theoretical design guidelines for a new class of open shell singlet molecular systems for nonlinear optics NLO and singlet fission

Implicit Curves and Surfaces: Mathematics, Data Structures and Algorithms Abel Gomes,Irina Voiculescu,Joaquim Jorge,Brian Wyvill,Callum Galbraith,2009-05-12 Implicit objects have gained increasing importance in geometric modeling visualisation animation and computer graphics because their geometric properties provide a good alternative to traditional parametric objects This book presents the mathematics computational methods and data structures as well as the algorithms needed to render implicit curves and surfaces and shows how implicit objects can easily describe smooth intricate and articulatable shapes and hence why they are being increasingly used in graphical applications Divided into two parts the first introduces the mathematics of implicit curves and surfaces as well as the data structures suited to store their sampled or discrete approximations and the second deals with different computational methods for sampling implicit curves and surfaces with particular reference to how these are applied to functions in 2D and 3D spaces

Computational Methods in Science and Engineering George Maroulis, Theodore E. Simos, 2007-12-14 All papers have been peer reviewed The aim of ICCMSE 2007 is to bring together computational scientists and engineers from several disciplines in order to share methods methodologies and ideas The potential readers of these proceedings are all the scientists with interest in the following fields Computational Mathematics Theoretical Physics Computational Physics Theoretical Chemistry Computational Chemistry Mathematical Chemistry Computational Engineering Computational Mechanics Computational Biology and Medicine Scientific Computation High Performance Computing Parallel and Distributed Computing Visualization Problem Solving Environments Software Tools Advanced Numerical Algorithms Modeling and Simulation of Complex Systems Web based Simulation and Computing Grid based Simulation and Computing Computational Grids and Computer Science

Energy and Seismic Renovation Strategies for Sustainable Cities Giuseppe Margani, 2019-06-11 The principle of sustainability should be strictly connected with safety since both aim to conserve resources in the case of sustainability the resources are typically thought of as environmental while in the case of safety the resources are basically human In spite of this common ground discussions on sustainability usually give insufficient attention to safety In the last years the EU has made large investments to increase the energy efficiency of the existing building stock paving the way for a low carbon future however less effort has been made to enhance its seismic resilience Therefore the safety and consequently the sustainability of towns situated in earthquake prone countries remain inadequate In such countries energy renovation actions should be combined with seismic retrofitting However a number of barriers considerably limit the real possibility of extensively undertaking combined retrofit actions especially for multi owner housing and high rise buildings These barriers are of different kinds technical e g unfeasibility and or ineffectiveness of conventional retrofit solutions financial e g high renovation costs insufficient incentives subsidies organizational e g occupants disruption and relocation renovation consensus by condominium ownerships and cultural social insufficient information and skills lack of adequate policy measures for promoting renovation actions This book aims to overcome these barriers and to bridge the gap between sustainability and safety so to conserve both human and environmental resources

Mathematical Modeling of Biosensors Romas Baronas, Feliksas Ivanauskas, Juozas Kulys, 2021-02-15 This newly designed and enlarged edition offers an up to date presentation of biosensor development and modeling from both a chemical and a mathematical point of view An entire new chapter in particular is dedicated to optimal design of biosensors Two more new chapters discuss biosensors which utilize microbial cells and are based on carbon nanotubes respectively All the other

chapters have been revised and updated The book contains unique modeling methods for amperometric potentiometric and optical biosensors based mainly on biocatalysts It examines processes that occur in the sensors layers and at their interface and it provides analytical and numerical methods to solve equations of conjugated enzymatic chemical and diffusion processes The action of single enzyme as well as polyenzyme biosensors and biosensors based on chemically modified electrodes is studied The modeling of biosensors that contain perforated membranes and multipart mass transport profiles is critically investigated Furthermore it is fully described how signals can be biochemically amplified how cascades of enzymatic substrate conversion are triggered and how signals are processed via a chemometric approach and artificial neuronal networks The results of digital modeling are compared with both proximal analytical solutions and experimental data

Computational Modelling in Hydraulic and Coastal Engineering Christopher Koutitas, Panagiotis D. Scarlatos, 2015-12-02 Combines More Than 40 Years of Expert Experience Computational modelling and simulation methods have a wide range of applications in hydraulic and coastal engineering Computational Modelling in Hydraulic and Coastal Engineering provides an introductory but comprehensive coverage of these methods It emphasizes the use of the finite differences meth
