Intelligent Systems in Process Engineering, Part I: Paradigms from Product and Process Design , 1995-11-14 Volumes 21 and 22 of *Advances in Chemical Engineering* contain ten prototypical paradigms which integrate ideas and methodologies from artificial intelligence with those from operations research estimation and control theory and statistics Each paradigm has been constructed around an engineering problem e g product design process design process operations monitoring planning scheduling or control Along with the engineering problem each paradigm advances a specific methodological theme

from AI such as modeling languages automation in design symbolic and quantitative reasoning inductive and deductive reasoning searching spaces of discrete solutions non monotonic reasoning analogical learning empirical learning through neural networks reasoning in time and logic in numerical computing Together the ten paradigms of the two volumes indicate how computers can expand the scope type and amount of knowledge that can be articulated and used in solving a broad range of engineering problems Sets the foundations for the development of computer aided tools for solving a number of distinct engineering problems Exposes the reader to a variety of AI techniques in automatic modeling searching reasoning and learning The product of ten years experience in integrating AI into process engineering Offers expanded and realistic formulations of real world problems , *New Hybrid Intelligent Systems for Diagnosis and Risk Evaluation of Arterial Hypertension* Patricia Melin, German Prado-Arechiga, 2017-07-04 In this book a new approach for diagnosis and risk evaluation of arterial hypertension is introduced The new approach was implemented as a hybrid intelligent system combining modular neural networks and fuzzy systems The different responses of the hybrid system are combined using fuzzy logic Finally two genetic algorithms are used to perform the optimization of the modular neural networks parameters and fuzzy inference system parameters The experimental results obtained using the proposed method on real patient data show that when the optimization is used the results can be better than without optimization This book is intended to be a reference for scientists and physicians interested in applying soft computing techniques such as neural networks fuzzy logic and genetic algorithms in medical diagnosis but also in general to classification and pattern recognition and similar problems
