 Languages presents case studies and practical applications for using the top programming languages in library and
 information settings While there are books and Web sites devoted to teaching programming there are few works that address
 multiple programming languages or address the specific reasons why programming is a critical area of learning for library
 and information science professionals There are many books on programming languages but no recent items directly written
 for librarians that span a variety of programs Many practicing librarians see programming as something for IT people or
 beyond their capabilities This book will help these librarians to feel comfortable discussion programming with others by
 providing an understanding of when the language might be useful what is needed to make it work and relevant tools to
 extend its application Additionally the inclusion of practical examples lets readers try a small app for the language This also
 will assist readers who want to learn a language but are unsure of which language would be the best fit for them in terms of
 learning curve and application Languages covered are JavaScript PERL PHP SQL Python Ruby CC Java This book is designed to
 provide a basic working knowledge of each language presented case studies which show the programming language used in
 real ways and resources for exploring each language in more detail *Technologies for E-Learning and Digital
