### Chapter 6: Investigating Chemical Reactions

Chapter 6: Investigating Chemical Reactions focuses on the fundamental skills needed to understand and describe chemical reactions, particularly through writing formulas and equations. One of the key concepts in this chapter is how energy changes during chemical reactions, which can either be absorbed or released. Reactions that release energy, such as combustion, are exothermic, while those that absorb energy, like photosynthesis, are endothermic. Understanding how energy flows during a reaction helps explain why some reactions happen spontaneously while others require external energy input. This chapter also covers how to distinguish between different types of reactions by looking at their patterns, such as synthesis, decomposition, single displacement, and double displacement reactions. By learning to identify these patterns, students can predict the products of various chemical reactions.

Additionally, this chapter delves into the importance of ion-containing solutions and their role in chemical reactions, focusing on which combinations will react with
