Investment Concepts Analysis Strategy:

Investment Robert C. Radcliffe, 1997 Instructors who are seeking moderately advanced coverage yet highly interactive pedagogy and presentation will no doubt appreciate the fifth edition of *Investment Concepts Analysis Strategy*. This edition continues to reflect the educational objectives of preceding editions, the principal goals of which are to integrate practical applications with theoretical concepts to stress the economic rationale and intuition for important concepts and to cultivate the reader's appreciation for well-functioning security markets in today's world. This book is aimed primarily at graduate and undergraduate students who are considering a professional career in finance. This text however is also used extensively in courses geared to individual investors who wish to make better personal investment decisions. Investment Robert C. Radcliffe, 1987-01 Investment Radcliffe, 1998-03-21 **Investment Concepts, Analysis and Strategy 5e - Study Guide** Radcliffe, 1997-01 **Models & Methods for Project Selection** Samuel B. Graves, Jeffrey L. Ringuest, Andrés L. Medaglia, 2003 *Models Methods for Project Selection* systematically examines in this book treatment the latest work in the field of project selection modeling. The models presented are drawn from mathematical programming, decision theory, and finance. These models are examined in two categorical streams: the management science stream and the financial model stream. The book describes the assumptions and limitations of each model and provides appropriate solution methodologies. Its organization follows three main themes: Criteria for Choice (Chapters 1-3) investigate the effect of the choice of optimization criteria on the results of the portfolio optimization problem. This group of chapters examines the multiobjective linear programming approach, discusses the appropriate methods for adjusting for time and risk in the project selection problem, and expands on the discussion of optimization models and NPV. Risk and Uncertainty (Chapters 4-7) deal with uncertainty in the project selection problem. The models developed in this section are based on probability distribution assumptions or estimates and deal with uncertainty in some aspect of the project selection model: Non-Linearity and Interdependence. These chapters deal with problems of non-linearity and interdependence as they arise in the project selection problem. The ability to handle non-linear problems allows the application of the methodology to a far wider range of problems. Similarly, the ability to model interdependence between projects as in the Information Technology models is an important step in generalization. Chapters 8-9 and 10 present solution methodologies which can be used to solve these most general project selection models. *Property Investment* Martin Hoesli, Bryan D. THE PROCESS OF HUMAN JUDGMENT

Human judgment is a process through which an individual uses social information to make decisions The social information is obtained from an individual's environment and is interpreted through the individual's cognitive image of the environment The cognitive image provides a representation of the environment based on past experiences and training and essentially predisposes the person to respond to social information in predictable ways An individual's policies or beliefs about the environment represent these patterns Human judgments are based then upon one's interpretation of available information They are probability statements about one's environment and how one reacts to it This condition leads to the human judgment process being inherently limited It is fundamentally a covert process It is seldom possible for an individual to accurately describe his or her judgment process accurately

Measuring Information Technology Investment Payoff Mo Adam Mahmood,Edward J. Szewczak,1999-01-01 It would seem that business investment in information technology IT is at

root no different from business investment in anything else After a careful consideration of the costs of the investment and its anticipated benefits a decision is made as to whether the benefits of the investment outstrip the costs and by how much If the benefits are competitive with other investment alternatives say a major marketing campaign then the business will commit financial resources to the IT proposal Otherwise it won't This decision making process is at the heart of capital budgeting Senior executives have been making IT investment decisions for well over three decades So why is the measurement of IT investment payoff so difficult and controversial Why do we need a book dealing with contemporary approaches to measuring IT investment payoff Why have earlier approaches to measuring IT investment payoff proven unsatisfactory In what respects have earlier approaches fallen short Do we need to scrap earlier approaches entirely or can we find important improvements to these approaches such that they can be newly applied to effectively measure IT investment payoff in ways that are convincing to senior management This book will help you to find improvements in existing methods for measuring IT investment payoff as well as to find new innovative methods for addressing the value of emerging IT
