Invisible Industrialist:

The Invisible Industrialist J. Gaudillière, 1998-07-13 Industrial methods and industrially produced instruments reagents and living organisms are central to research activities today They play a key role in the homogenization and the diffusion of laboratory practices thus in their transformation into a stable and unproblematic knowledge about the natural world This book displays the frequently invisible role of industry in the construction of fundamental scientific knowledge through the examination of case studies taken from the history of nineteenth and the twentieth century physics chemistry and biomedical sciences *The Recombinant University* Doogab Yi, 2015-03-23 This title examines the history of biotechnology when it was new especially when synonymous with recombinant DNA technology It focuses on the academic community in the San Francisco Bay Area where recombinant DNA technology was developed and adopted as the first major commercial technology for genetic engineering at Stanford in the 1970s The book argues that biotechnology was initially a hybrid creation of academic and commercial institutions held together by the assumption of a positive relationship between private ownership and the public interest *Meat, Medicine and Human Health in the Twentieth Century* Christian Bonah, 2015-10-06 This collection of essays explores some of the complex relations between meat and health in the twentieth century It highlights a complicated array of contradictory attitudes towards meat and human health They show how meat came to be regarded as a central part of a modern healthy diet and trace critiques of meat eating and the meat industry

Culturing Life Hannah Landecker, 2010-03-30 How did cells make the journey one we take so much for granted from their origin in living bodies to something that can be grown and manipulated on artificial media in the laboratory a substantial biomass living outside a human body plant or animal This is the question at the heart of Hannah Landecker's book She shows how cell culture changed the way we think about such central questions of the human condition as individuality hybridity and even immortality and asks what it means that we can remove cells from the spatial and temporal constraints of the body and harness them to human intention Rather than focus on single discrete biotechnologies and their stories embryonic stem cells transgenic animals Landecker documents and explores the wider genre of technique behind artificial forms of cellular life She traces the lab culture common to all those stories asking where it came from and what it means to our understanding of life technology and the increasingly blurry boundary between them The technical culture of cells has transformed the meaning of the term biological as life becomes disembodied distributed widely in space and time Once we have a more specific grasp on how altering biology changes what it is to be biological Landecker argues we may be more prepared to answer the social questions that biotechnology is raising [Cancer Patients, Cancer Pathways](#) C. Timmermann, E. Toon, 2012-10-10 Eleven essays by historians and sociologists examine cancer research and treatment as everyday practice in post war Europe and North America These are not stories of inevitable medical progress and obstacles overcome but of historical contingencies cultural differences hope and often disappointed expectations **The Age of**

Electroacoustics Roland Wittje, 2025-02-18 The transformation of acoustics into electro acoustics a field at the intersection of science and technology guided by electrical engineering industry and the military At the end of the nineteenth century acoustics was a science of musical sounds the musically trained ear was the ultimate reference Just a few decades into the twentieth century acoustics had undergone a transformation from a scientific field based on the understanding of classical music to one guided by electrical engineering with industrial and military applications In this book Roland Wittje traces this transition from the late nineteenth century work of Hermann Helmholtz to the militarized research of World War I and media technology in the 1930s Wittje shows that physics in the early twentieth century was not only about relativity and atomic structure but encompassed a range of experimental applied and industrial research fields The emergence of technical acoustics and electroacoustics illustrates a scientific field at the intersection of science and technology Wittje starts with Helmholtz's and Rayleigh's work and its intersection with telegraphy and early wireless and continues with the industrialization of acoustics during World War I when sound measurement was automated and electrical engineering and radio took over the concept of noise Researchers no longer appealed to the musically trained ear to understand sound but to the thinking and practices of electrical engineering Finally Wittje covers the demilitarization of acoustics during the Weimar Republic and its remilitarization at the beginning of the Third Reich He shows how technical acoustics fit well with the Nazi dismissal of pure science representing everything that German Physics under National Socialism should be experimental applied and relevant to the military

Biologics, A History of Agents Made From Living Organisms in the Twentieth Century Alexander von Schwerin, Heiko Stoff, Bettina Wahrig, 2015-10-06 The use of biologics drugs made from living organisms has raised specific scientific industrial medical and legal issues The essays contained in this collection each deal with a case study of a biologic substance or group of biologics and its use during the twentieth century

Mapping the Spectrum Klaus Hentschel, 2002 Ever since the boom of spectrum analysis in the 1860s spectroscopy has become one of the most fruitful research technologies in analytic chemistry physics astronomy and other sciences This book is the first in depth study of the ways in which various types of spectra especially the sun's Fraunhofer lines have been recorded displayed and interpreted The book assesses the virtues and pitfalls of various types of depictions including hand sketches woodcuts engravings lithographs and from the late 1870s onwards photomechanical reproductions The material of a 19th century engraver or lithographer the daily research practice of a spectroscopist in the laboratory or a student's use of spectrum posters in the classroom all are looked at and documented here For pioneers of photography such as John Herschel or Hermann Wilhelm Vogel the spectrum even served as a prime test object for gauging the color sensitivity of their processes This is a broad contextual portrayal of the visual culture of spectroscopy in the 19th and early 20th centuries The illustrations are not confined to spectra they show instruments laboratories people at work and plates of printing manuals The result is a multifaceted description focusing on the period from Fraunhofer up to the beginning of Bohr's quantum theory A great deal

of new and fascinating material from two dozen archives has been included A must for anyone interested in the history of modern science or in research practice using visual representations Crafting Immunity Jennifer Keelan,2017-03-02 Immunity is as old as illness itself yet historians have only just begun to take up the challenge of reconstructing the modern transformation of attempts to protect against disease Crafting Immunity assembles in one volume the most recent efforts of an international group of scholars to place the diverse practices of immunity in their historical contexts It is this diversity that provides the book with its greatest source of strength Collectively the papers in this volume suggest that it was the craft like small scale and local conditions of clinical medicine that turned the immunity of individuals and populations into biomedical objects That is to say the modern conception of immunity was at least as much the product of the work of healing as it was the systematic result of discoveries about the immune system Working outside the narrow confines of laboratory histories Crafting Immunity is the first attempt to set the problems of immunity into a variety of social technological institutional and intellectual contexts It will appeal not only to historians and sociologists of health but also to social and cultural historians interested in the biomedical creation of modern health regimens **Medicine, the Market and the Mass Media** Virginia Berridge,Kelly Loughlin,2004-08-02 This collection opens up the post war history of public health to sustained research based historical scrutiny Medicine the Market and the Mass Media examines the development of a new view of the health of the public and the influences which shaped it in the post war years Taking a broad perspective the book examines developments in Western Europe and the relationships between Europe and the US The essays looks at the dual legacy of social medicine through health services and health promotion and analyse the role of mass media along with the connections between public health and industry This international collection will appeal to public health professionals students of the history of medicine and of health policy *War and Disease* Leo Slater,2009-01-09 Malaria is one of the leading killers in the world today Though drugs against malaria have a long history attempts to develop novel therapeutics spanned the twentieth century and continue today In this historical study Leo B Slater shows the roots and branches of an enormous drug development project during World War II Fighting around the globe American soldiers were at high risk for contracting malaria yet quinine a natural cure became harder to acquire A U S government funded antimalarial program initiated by the National Research Council brought together diverse laboratories and specialists to provide the best drugs to the nation s military This wartime research would deliver chloroquine long the drug of choice for prevention and treatment of malaria and a host of other chemotherapeutic insights A massive undertaking the antimalarial program was to biomedical research what the Manhattan Project was to the physical sciences A volume in the *Critical Issues in Health and Medicine* series edited by Rima D Apple and Janet Golden *The Cambridge History of Science: Volume 5, The Modern Physical and Mathematical Sciences* David C. Work at the Astronomical Observatory of Chile (1852-1927) Carlos Sanhueza-Cerda,2025-03-01 This book fills a significant gap in the historiography of science by examining the overlooked contributions of non astronomical personnel in the early National Astronomical Observatory of Chile Drawing upon David Edgerton s critique of the bias towards academic scientists in historical narratives this research delves into the roles of other scientists technicians collaborators and other support staff in shaping scientific endeavors The book analyzes archival documents and reveals the essential yet often unacknowledged labor involved in routine scientific tasks By challenging the hierarchical structure of observatory organizations and spotlighting the significance of routine work the book redefines the production of scientific knowledge beyond the conventional focus on eminent scientists Emphasizing the importance of failures conflicts and controversies this book unveils the hidden narratives of everyday scientific labor offering a more comprehensive understanding of the history of astronomy in Chile

Neuro Nikolas Rose,Joelle M. Abi-Rached,2013-02-24 The brain sciences are influencing our understanding of human behavior as never before from neuropsychiatry and neuroeconomics to neurotheology and neuroaesthetics Many now believe that the brain is what makes us human and it seems that neuroscientists are poised to become the new experts in the management of human conduct Neuro describes the key developments theoretical technological economic and biopolitical that have enabled the neurosciences to gain such traction outside the laboratory It explores the ways neurobiological conceptions of personhood are influencing everything from child rearing to criminal justice and are transforming the ways we know ourselves as human beings In this emerging neuro ontology we are not determined by our neurobiology on the contrary it appears that we can and should seek to improve ourselves by understanding and acting on our brains Neuro examines the implications of this emerging trend weighing the promises against the perils and evaluating some widely held concerns about a neurobiological colonization of the social and human sciences Despite identifying many exaggerated claims and premature promises Neuro argues that the openness provided by the new styles of thought taking shape in neuroscience with its contemporary conceptions of the neuromolecular plastic and social brain could make possible a new and productive engagement between the social and brain sciences Publisher s description
