National Bureau of Standards,1948 Ionospheric Radio Waves Kenneth Davies,1969 Spatial Properties of Ionospheric Radio Propagation as Determined with Half Degree Azimuthal Resolution Stanford University. Stanford Electronics Laboratories,1970 The purpose of the research was to investigate experimentally the properties of oblique ionospheric radio propagation which could degrade or limit the performance realized by a very wide aperture 2 5 km high frequency broadside array High frequency HF refers to the frequency band from 3 MHz to 30 MHz A broadside antenna array is one whose main lobe direction is roughly perpendicular to the line of its elements Since the performance of such an array can most meaningfully be measured in terms of its horizontal pattern beamwidth and sidelobe levels the emphasis of this study was upon the apparent azimuthal pattern of an array when receiving ionospherically propagated radio energy emanating from a point source Author **Ionospheric Radio Propagation (Classic Reprint)** United States. Bureau Of Standards,2017-11-17 Excerpt from *Ionospheric Radio Propagation* The considerations brought out in chapters 7 and 8 are employed practically in chapter 9 to enable the calculation of the lowest useful high frequency that may be used for communication over certain

paths at certain times employing a given amount of power and also the calculation of the inverse quantity i.e. the lowest required radiated power to permit communication for specified conditions and frequencies Several examples of the calculation of the quantities involved are given and the necessary charts and data for these calculations are presented About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

National bureau of standards, 1948 *The Propagation of Radio Waves* K. G. Budden, 1988-08-04 This book is concerned with the ionosphere and the magnetosphere and the theory of their effect on radio waves It includes accounts of some mathematical topics now widely used in this study particularly W K B approximations Airy integral functions and integration by steepest descents The subject is divided into ray theory and full wave theory Ray theory is useful for high frequencies when the ionosphere is treated as a horizontally stratified medium The discussion of the magnetosphere whose structure is more complicated includes an account of whistlers and ion cyclotron whistlers The book has been planned both for final year undergraduates and as a reference book for research It is suitable as a course book on radio propagation for students of physics or electrical engineering or mathematics Some of the topics are presented from an elementary viewpoint so as to help undergraduates new to the subject The later parts are more advanced Because the subject is so large and has seen many important recent advances some topics have had to be treated briefly but there is a full bibliography with about 600 references
