Legacy Of Tethys:

The Legacy of Tethys F.D. Por, 2012-12-06 This book is an attempt to present a comprehensive view on the aquatic biogeography of a small but very dynamic and complex area of the globe. Luckily this area called here the Levant has attracted much interest in the past and is being increasingly studied in the present. The interphasing between the knowledge of the historical and formative processes and that of the recent distributional aspects is fairly good. The recent years saw also a widening effort which expressed itself in several symposia and monographic books. Therefore I considered it possible to treat the whole subject of the aquatic biogeography of the Levant singlehandedly rather than in the presently widespread manner of an edited book. I am keenly conscious of the shortcomings of my approach of presenting much second hand information. Possibly this is being compensated by the fact that this book has a more coherent structure and eventually a clearer scientific message. The effort spent in synthesizing the data from the widely different sources hopefully pays off in a presentation which is more easily comprehended by the average reader. For the suspicious reader I would recommend to read first the closing chapter of this book in which the quintessence of this book and its message is presented in a summarizing manner.

Nouragues F. Bongers, P. Charles-Dominique, P.-M. Forget, Marc Théry, 2013-06-29 Nouragues is a tropical forest research station in French Guiana. It was established in 1986 for research on natural mechanisms of forest regeneration. Since then a lot of research has been done on this and related topics. This book provides an overview of the main research results and focuses on plant communities, vertebrate communities and evolutionary ecology, frugivory and seed dispersal and forest dynamics and recruitment. The appendices give annotated checklists of plants, birds, mammals, herpetofauna and fishes found in the same area.

The Biodiversity Crisis and Crustacea - Proceedings of the Fourth International Crustacean Congress J. Carel von Vaupel Klein, 2000-06-01 The papers in this volume have been grouped according to the main sub themes of the congress and primarily deal with the biodiversity issues of invasive crustacea, ecology and behaviour and fisheries and aquaculture.

The Mediterranean Sea Stefano Goffredo, Zvy Dubinsky, 2013-09-09 This volume is an indispensable addition to the multidisciplinary coverage of the science of the Mediterranean Sea. The editors have gathered leading authorities from the fields of Marine Biology, Ecology, paleoclimatology, Chemical and Physical Oceanography, Zoology, Botany, Aquatic Photosynthesis, Socioeconomics, Mariculture, Mediterranean History and Science of Humanity. Beginning with the birth of the Mediterranean Sea and its myths, from coral to fish, an introduction is given to its major inhabitants of plants and animals past and present. The chapters illustrate how organisms interact as part of the structure and function of the Sea's main ecosystems. The rise of the Mediterranean as the cradle of the Western Civilization leads to a discourse on the status of human interaction with the sea. Accelerating global climate change, water warming, ocean acidification and sea level rise and analyses of their effects on key organisms, entire ecosystems and human socioeconomics are given. Forecasting and predictions are presented taking into account different future scenarios.

from the IPCC International Panel on Climate Change The volume is richly illustrated in color with an extensive bibliography A valuable addition to the limited literature in the field offering up to date broad coverage merging science and humanities
