Krishnamurti and the Nameless Experience Rohit Mehta, 1979 J Krishnamurti is one of the most revolutionary thinkers of our age To listen to him or to read his books is an experience by itself He challenges every norm and value of individual as well as social life He is not interested in mere outer changes he stands for a fundamental transformation what he calls the Mutation of the Mind He states that there must arise first the New Man before a New Society can be brought into existence The present book deals comprehensively with all aspects of Krishnamurti s teachings his philosophy his psychology and a practice of no practice Krishnamurti says Society is always static only in the individual can there be a radical revolution It is with this individual revolution that this book is fundamentally concerned **Advances in Child**

The Creative Process Scott R. Turner, 2014-02-25 Someday computers will be artists They ll be able to write amusing and original stories invent and play games of unsurpassed complexity and inventiveness tell jokes and suffer writer s block But these things will require computers that can both achieve artistic goals and be creative Both capabilities are far from accomplished This book presents a theory of creativity that addresses some of the many hard problems which must be solved to build a creative computer It also presents an exploration of the kinds of goals and plans needed to write simple short stories These theories have been implemented in a computer program called MINSTREL which tells stories about King Arthur and his knights While far from being the silicon author of the future MINSTREL does illuminate many of the interesting and difficult issues involved in constructing a creative computer The results presented here should be of interest to at least three different groups of people Artificial intelligence researchers should find this work an interesting application of symbolic AI to the problems of story telling and creativity Psychologists interested in creativity and imagination should benefit from the attempt to build a detailed explicit model of the creative process Finally authors and others interested in how people write should find MINSTREL s model of the author level writing process thought provoking

Memory in Infancy Patricia J. Bauer, 2010-11-25 Volume 38 of the Advances in Child Development and Behavior series is concerned with the development of memory in the first years of life. It covers an introduction to normative development of memory during this period and an introduction of a means of assessing memory in preverbal infants namely elicited imitation. Three chapters each concern a special population in which we have reason to believe the development of memory will be affected due to compromised hippocampal development as a result of maternal gestational diabetes, preterm birth, early deprivation resulting from institutional orphanage care and abuse and or neglect by the caregiver. Goes in depth to address the varieties of Early Experience Influences on Declarative Memory Development. A necessary resource for both psychology researchers and students. Proceedings of the Fourteenth Annual Conference of the Cognitive Science Society Cognitive Science Society (US) Conference, 2014-05-12 This volume features the complete text of all regular papers, posters and summaries of symposia presented at the 14th annual meeting of the Cognitive Science Society. *Artificial Intelligence in Design '98* John S. Gero, 1998-12-06 The development of computational models of design founded on the artificial intelligence paradigm has provided an impetus for much of current design research. As artificial intelligence has matured and developed new approaches, so the impact of these new approaches on design research has been felt. This can be seen in the way concepts from cognitive science have found their way into artificial intelligence and hence into design research. And also in the way in which agent-based systems are being incorporated into design systems. In design research there is an increasing blurring between notions drawn from artificial intelligence and those drawn from cognitive science. Whereas a number of years ago the focus was largely on applying artificial intelligence to designing as an activity, thus treating designing as a form of problem solving, today we are seeing a much wider variety of conceptions of the role of artificial intelligence in helping to model and comprehend designing as a process. Thus we see papers in this volume which have as their focus the development or implementation of frameworks for artificial intelligence in design, attempting to determine a unique locus for these ideas. We see papers which attempt to find foundations for the development of tools based on the artificial intelligence paradigm, often the foundations come from cognitive studies of human designers. *The Cognitive Bases of Interpersonal Communication* Dean E. Hewes, 2013-12-16 Our interpretations of the world we live in and the people and institutions that comprise it are acquired through complex interactions among what we believe to be true, what the world is, and or what others think it is. Understanding those complex interactions is one of the most important goals of the social sciences. Of the many disciplines that have contributed to that understanding, two take center stage in this book: psychology and communication. This volume's purpose is to reconnect the partially isolated environments of social psychology and communication. To do so, it utilizes four building blocks: the cognitive foundations of interpersonal communication as it might be studied from a social psychological perspective; insiders' views of interpersonal communication from a cognitive psychological standpoint; insiders' approaches to

interpersonal communication from an AI perspective a critique of the cognitive enterprise that reflects the strong philosophical grounding of communication Overall the chapters typify some of the most interesting cognitive work done in the study of interpersonal communication As such the book should promote productive dialogue across disciplinary boundaries and stimulate further work within the field of interpersonal communication
