The Future of Post-Human Creative Thinking Peter Baofu, 2009-03-26 What exactly makes creative thinking so magical that somehow everyone can be creative and by implication creativity is a good thing to have to the point that this popular view is fast becoming a fashionable nonsense in this day and age of ours To put things in a historical perspective this popular view contrasts sharply with the opposing view in the older days e.g. during the Enlightenment and Romantic eras when people used to think that creativity was primarily for the selected few with extraordinary abilities Contrary to the respective conventional wisdom in each of the two opposing eras neither of the two views is valid Ours is no more so than theirs This is not to imply of course that there are only a few instances of creativity in human history or in reverse that creativity can be equally taught to everyone and for that matter that there is absolutely nothing good about creativity Obviously extreme views like this are far from the truth The point in this book however is to show an alternative better way to understand the nature of creative thinking which goes beyond both convergent and divergent thinking while learning from them The current fashionable nonsense on creative thinking has tended to minimize its hidden downsides and exaggerate its overstated promises as part of a new ideology in this age of ours In addition there is nothing intrinsically good or bad about creative thinking just as there is nothing essentially good or evil about God the King Motherland or the like by analogy They have all been used and misused in accordance to the interests and powers that be over the ages If true this seminal view will fundamentally change the way that we think about the nature of imagination and intuition with its enormous implications for the future of invention and innovation in a small sense and what I originally called its post human fate in a large one
