## **Investigative Work In The Science Curriculum:**

Investigative Work in the Science Curriculum Richard Gott, Sandra Duggan, 1995 The book considers the place of investigative work in the science curriculum and presents the latest research in this field The authors consider the theoretical framework which underlies this kind of practical work what are pupils actually learning and what are we trying to teach them They argue that the thinking behind the doing of science is at present undervalued and that this is something that needs to be taught They present innovative ways of focusing teaching on particular aspects of investigations and consider the issue of assessment The interplay between theory research and practice will appeal to readers who are involved in secondary science education and who are eager to know more about the present state of knowledge in investigative work in science

Good Practice In Science Teaching: What Research Has To Say Osborne, Jonathan, Dillon, Justin, 2010-05-01 This volume provides a summary of the findings that educational research has to offer on good practice in school science teaching It offers an overview of scholarship and research in the field and introduces the ideas and evidence that guide it The World of Science Education , 2009-01-01 Each volume in the 7 volume series The World of Science Education reviews research in a key region of the world These regions include North America South and Latin America Asia Australia and New Zealand Europe and Israel North Africa and the Middle East and Sub Saharan Africa The focus of this Handbook is on Australasia a region loosely recognized as that which includes Australia and New Zealand plus nearby Pacific nations such as Papua New Guinea Solomon Islands Fiji Tonga Vanuatu and the Samoan islands science education and the scholarship that most closely supports this program The reviews of the research situate what has been accomplished within a given field in Australasian rather than international context The purpose therefore is to articulate and exhibit regional networks and trends that produced specific forms of science education The thrust lies in identifying the roots of research programs and sketching trajectories focusing the changing face of problems and solutions within regional contexts The approach allows readers review what has been done and accomplished what is missing and what might be done next **Teaching and Learning**

**Secondary Science** Jerry Wellington, Professor Jerry Wellington, Gren Ireson, 2002-01-31 A comprehensive and critical guide for new and experienced teachers on the teaching and learning of science It combines an overview of current research with an account of curriculum changes to provide a valuable and practical guide to the business of classroom teaching

Teaching Science in Secondary Schools Sandra Amos, Richard Boohan, 2013-10-11 A companion to Aspects of Teaching Secondary Science the first section of this reader provides an overview of the key issues discussing the nature of science and its role in the school curriculum The second section goes on to examine critically the ways in which science is reflected in the school curriculum while the third section discusses recent curriculum initiatives and developments Turning the focus from what is taught on to who is taught section four shows that students are very much active learners in the classroom making sense of their experiences and constructing their own meanings The final section covers the role of research in science

John Sears, Pete Sorenson, 2005-08-18 *Issues in Science Teaching* covers a wide range of important issues which will interest teachers at all phases in the education system. The issues discussed include the nature and purposes of science education in a multicultural society including the idea of science for all, the role and purposes of investigational work in science education, assessment, curriculum progression and pupil attitudes to their science experience, supporting basic skills development in literacy, numeracy and ICT through science teaching, supporting cross curricular work through science teaching, taking account of individual differences including ability, special needs, learning style and the case for inclusion. The articles are strongly based on current research and are intended to stimulate and broaden debate among the readers. Written by practising science educators and teachers, this book offers new and interesting ways of developing science education at all levels.

Enhancing Learning with Effective Practical Science 11-16 Ian Abrahams, Michael J. Reiss, 2016-12-15 *Enhancing Learning with Effective Practical Science* begins with an exploration of the reasons why practical work is often less effective than it could be. It provides 72 full and clear lesson guides for effective practical lessons in biology, chemistry and physics for students aged between 11 and 16. Each lesson guide presents the practical work to be undertaken, the apparatus and materials required and the ideas to be explored. Health and safety issues are also covered. Essential reading for trainee science teachers and practising teachers looking to enhance their teaching through effective use of practical work, especially if teaching outside their science specialism.
