Advances in Visual Information Management Hiroshi Arisawa, Tiziana Catarci, 2013-03-20 Video segmentation is the most fundamental process for appropriate indexing and retrieval of video intervals. In general, video streams are composed of 1 of shots delimited by physical shot boundaries. Substantial work has been done on how to detect such shot boundaries automatically. Arman et al 1993, Zhang et al 1993, Zhang et al 1995, Kobla et al 1997. Through the integration of technologies such as image processing, speech character recognition and natural language understanding, keywords can be extracted and associated with these shots for indexing. Wactlar et al 1996. A single shot, however, rarely carries enough amount of information to be meaningful by itself. Usually, it is a semantically meaningful interval that most users are interested in retrieving. Generally, such meaningful intervals span several consecutive shots. There hardly exists any efficient and reliable technique, either automatic or manual, to identify all semantically meaningful intervals within a video stream. Works by Smith and Davenport 1992, Oomoto and Tanaka 1993, Weiss et al 1995, Hjelsvold et al 1996 suggest manually defining all such intervals in the database in advance. However, even an hour-long video may have an indefinite number of meaningful intervals. Moreover, video data is multi-interpretative. Therefore, given a query, what is a meaningful interval to an annotator may not be meaningful to the user who issues the query. In practice, manual indexing of meaningful intervals is labour-intensive and inadequate.

The Unseen Foundations of Society George Douglas Campbell Duke of Argyll,1893 **Electromagnetism and the Metonymic Imagination** Kieran M. Murphy,2020-04-02 How does the imagination work How can it lead to both reverie and scientific insight In this book Kieran M Murphy sheds new light on these perennial questions by showing how they have been closely tied to the history of electromagnetism The discovery in 1820 of a mysterious relationship between electricity and magnetism led not only to technological inventions such as the dynamo and telegraph which ushered in the electric age but also to a profound reconceptualization of nature and the role the imagination plays in it From the literary experiments of Edgar Allan Poe Honor de Balzac Villiers de l Isle Adam and Andr Breton to the creative leaps of Michael Faraday and Albert Einstein Murphy illuminates how electromagnetism legitimized imaginative modes of reasoning based on a more acute sense of interconnection and a renewed interest in how metonymic relations could reveal the order of things Murphy organizes his study around real and imagined electromagnetic devices ranging from Faraday s world changing induction experiment to new types of chains and automata in order to demonstrate how they provided a material foundation for rethinking the nature of difference and relation in physical and metaphysical explorations of the world human relationships language and binaries such as life and death This overlooked exchange between science and literature brings a fresh perspective to the critical debates that shaped the nineteenth century Extensively researched and convincingly argued this pathbreaking book addresses a significant lacuna in modern literary criticism and deepens our understanding of both the history of literature and the history of scientific thinking *The Unseen*
