Kollai,2014-03-28 Cardiovascular Physiology Neural Control Mechanisms contains the proceedings of the symposia of the 28th International Congress of Physiology held in Budapest between 13 and 19 of July 1980 Organized into six parts this book begins with an elucidation of the integrative role of the autonomic nervous system in the regulation of cardiovascular function Parts II and III explain neural reflex control of the heart and cerebral blood flow regulation Nervous control of the microcirculation and control of vascular capacitance in man and animals are then discussed The last part focuses on the reflex control of the circulation in man      *Microcirculation* Ronald F. Dopico, MD, PhD,2016-07-06 Ion channels are the major class of membrane proteins responsible for rapid and regulated transport of ions across biological membranes and for the generation and propagation of electrical signals in the brain heart and skeletal and vascular tissues Ion channels are also known to play critical roles in regulation of cell proliferation insulin secretion and intracellular signaling in a variety of cell types This book focuses on the roles of ion channels in vascular tissues under normal and pathological conditions Vascular abnormalities are known to underlie a plethora of severe pathological conditions such as atherosclerosis systemic and pulmonary hypertension coronary or cerebral vasospasm and diabetes In addition misregulated angiogenesis is one of the major contributors to the development of tumors Therefore it is clearly imperative to obtain a better understanding of the molecular mechanisms that contribute to vascular disorders This book will be the first comprehensive assembly of assays to present the studies that have been done during the last decade to elucidate the roles of ion channels in different vascular diseases *Current Concepts on Ocular Blood Flow in Glaucoma* Lutz E. Pillunat,1999 *Kidney and Blood Pressure Regulation* H. Suzuki,T. Saruta,Claudio Ronco,2004-07 Chronic kidney disease is one of the

world's major public health problems and the prevalence of kidney failure is rising steadily. Among the risk factors for a faster progression of renal disease are hypertension and proteinuria. Many studies clearly demonstrate that hypertension is both a cause and consequence of chronic kidney disease. Namely, renal blood pressure regulation seems to be involved in five major pathophysiological mechanisms all closely related to the renin-angiotensin system: pressure natriuresis, renal sympathetic nervous system, renal blood flow, intraglomerular pressure, and tubuloglomerular feedback. This book reviews experimental data which form the basis of our current understanding of the association between hypertension and kidney diseases. The pathogenesis of increased blood pressure, the mechanisms by which systemic hypertension promotes progressive kidney failure, and the impact of antihypertensive agents on experimental renal mechanisms involved in hypertension. Furthermore, the role of angiotensin II receptor blockers in both the control of systemic blood pressure and the reduction of proteinuria is examined in an attempt to define optimal therapeutic strategies to prevent the otherwise inexorable deterioration of renal function in patients with chronic kidney disease.

*The Reticuloendothelial System* Sherwood M. Reichard, 1985-01-01

This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and biomedical scientists in general who are interested in the intricate system of cells and molecular moieties derived from those cells which constitute the RES. It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system. Nevertheless, because of historical developments and current interest in the subject by investigators from many diverse areas, it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology, biochemistry, phylogeny, and ontogeny, physiology and pharmacology, as well as clinical areas including immunopathology, cancer, infectious diseases, allergy, and hypersensitivity. It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES, attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines. The treatise editors and their editorial board, consisting predominantly of the editors of individual volumes, are extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community in general and especially by members of the American as well as European and Japanese Reticuloendothelial Societies.
