Real-Time Integration Methods for Mechanical System Simulation Edward J. Haug, Roderic C. Deyo, 2013-06-29 This book contains the edited versions of lectures and selected contributed papers presented at the NATO Advanced Research Workshop on Real Time Integration Methods For Mechanical System Simulation held in Snowbird Utah August 7 11 1989 The Institute was attended by 42 participants from 9 countries including leading mathematicians and engineers from universities research institutions and industry The majority of participants presented either invited or contributed papers during the Institute and everyone participated in lively discussions on scientific aspects of the program The Workshop provided a forum for investigation of promising new directions for solution of differential algebraic equations DAE of mechanical system dynamics by mathematicians and engineers from numerous schools of thought The Workshop addressed needs and opportunities for new methods of solving of DAE of mechanical system dynamics from the perspective of a broad range of engineering and scientific applications Among the most exciting new applications addressed was real time computer simulation of mechanical systems that for the first time in human history permits operator in the loop simulation of equipment that is controlled by the human e g driving a vehicle operating a space telerobot operating a remote manipulator and operating construction equipment The enormous potential value of this new application and the fact that real time numerical integration methods for DAE of mechanical system dynamics is the pacing problem to be solved in realizing this potential served to focus much of the discussion at the Workshop

Computer-Aided Mechanical Assembly Planning Luis S. Homem de Mello, Sukhan Lee, 2012-12-06 Some twenty years have elapsed since the first attempts at planning were made by researchers in artificial intelligence These early programs concentrated on the development of plans for the solution of puzzles or toy problems like the rearrangement of stacks of blocks These early programs provided the foundation for the work described in this book the automatic generation of plans for industrial assembly As one reads about the complex and sophisticated planners in the current generation it is important to keep in mind that they are addressing real world problems Although these systems may become the toy systems of tomorrow they are providing a solid foundation for future more general and more advanced planning tools As demonstrated by the papers in this book the field of computer aided mechanical assembly planning is maturing It now may include geometric descriptions of parts extracted from or compatible with CAD programs constraints related to part interference and the use of tools fixtures and jigs required for the assembly the nature of connectors matings and other relations between parts number of turnovers required during the assembly handling and gripping requirements for various parts automatic identification of subassemblies This is not an exhaustive list but it serves to illustrate the complexity of some of the issues which are discussed in this book Such issues must be considered in the design of the modern planners as they produce desirable assembly sequences and precedence relations for assembly
