Graphical Methods In Research:

Graphical Methods in Research A S. Levens, 1960 The Graphical Method for Finding the Optimal Solution for Neutrosophic linear Models and Taking Advantage of Non-Negativity Constraints to Find the Optimal Solution for Some Neutrosophic linear Models in Which the Number of Unknowns is More than Three Maissam Jdid ,Florentin Smarandache, 2023-01-01 The linear programming method is one of the important methods of operations research that has been used to address many practical issues and provided optimal solutions for many institutions and companies which helped decision makers make ideal decisions through which companies and institutions achieved maximum profit but these solutions remain ideal and appropriate in If the conditions surrounding the work environment are stable because any change in the data provided will affect the optimal solution and to avoid losses and achieve maximum profit we have in previous research reformulated the linear models using the concepts of neutrosophic science the science that takes into account the instability of conditions and fluctuations in the work environment and leaves nothing to chance While taking data neutrosophic values carry some indeterminacy giving a margin of freedom to decision makers In another research we reformulated one of the most important methods used to solve linear models which is the simplex method using the concepts of this science and as a continuation of what we did in the previous two researches we will reformulate in this research The graphical method for solving linear models using the concepts of neutrosophics We will also shed light on a case that is rarely mentioned in most operations research references which is that when the difference between the number of unknowns and the number of constraints is equal to one two or three we can also find the optimal solution graphically for some linear models This is done by taking advantage of the conditions of non negativity that linear models have and we will explain this through an example in which the difference is equal to two Also through examples we will explain the difference between using classical values and neutrosophic values and the extent of this s impact on the optimal solution Graphical Methods in Research Alexander Sander Levens, 1975 Graphical Methods in Research Levens, 1965-01-01 *New Methods of Geostatistical Analysis and Graphical Presentation* Roberto Bachi, 2007-07-27 From the Foreword The chief aim of this book is to present the reader with an integrated system of methods dealing with geographical statistics geostatistics and their applications It sums up developments based on the vast experience accumulated by Professor Bachi over several decades of research Interest in the quantitative locational aspects of geography and in the common ground of geography and statistics has grown rapidly involving an ever increasing spectrum of scientific disciplines the present volume will fill a genuine need as a textbook as a reference work and as a practical aid for geographers applied statisticians demographers ecologists regional planners economists professional staff of official statistical agencies and others E Peritz G Nathan N Kadmon **Graphical Rational Patterns** Roberto Bachi, In this book an attempt is made to evaluate the adequacy of common diagrammatical cartographical and other graphical methods in order to represent in a scientific manner the various types of statistical data of which

graphical presentation may be sought In regard to many important types of data such as contingency tables correlation tables other double entry tables and various geographical statistical distributions common graphical methods seem to be inadequate A new device the Graphical Rational Patterns GRP which appears to be of considerable help in graphical presentation of such data is therefore introduced Single GRP enable the representation of any integer 10 a by a pattern formed by u unitary marks of area a which indicate the units and by t marks of area 10a which indicate the tens As these patterns require very little space and are enclosed within small square frames they allow extremely simple representation of any double entry table Such single patterns can be used too to indicate on a geographical map that a value n is to be attached to a given area or a given line isoline line of traffic flow etc By the means of GRP it is possible to solve rationally many problems connected with the construction of a geographical statistical map The use of GRP also allows rearrangement at will of the various elements of the graph without changing the entire graph for instance individual GRP or columns or lines of GRP can be removed and their order changed The book illustrates possibilities of making alternative comparisons of data of examining alternative hypotheses or relationships between data represented of discovering lags and leads and following up cohorts in the course of time etc GRP graphs may be prepared quickly by anyone by the use of preprinted patterns prepared on adhesive paper Examples of applications have been taken from different fields official national and international statistics demography economics sociology geography anthropology meteorology business administration teaching of statistical methods etc

Essential Graphical Techniques in Geography Swapan Kumar Maity, 2021-11-30

Representation of geographical data using graphs diagrams and mapping techniques is a key for geographers and for researchers in other disciplines to explore the nature of data the pattern of spatial and temporal variations and their relationships and formulation of principles to accurately understand and analyze features on or near the earth's surface These modes of representation also enable the development of spatial understanding and the capacity for technical and logical decision making The book depicts all types of graphs diagrams and maps explained in detail with numerous examples The emphasis is on their appropriate data structure the relevance of selecting the correct technique methods of their construction advantages and disadvantages of their use and applications of these techniques in analyzing and realizing the spatial pattern of various geographical features and phenomena This book is unique in that it reflects a perfect correlation between theoretical knowledge of geographical events and phenomena and their realistic implications with relevant examples using appropriate graphical methods The book serves as a valuable resource for students researchers cartographers and decision makers to analyze and represent various geographical data for a better systematic and scientific understanding of the real world

demonstrating how Sleptsov Net Computing can contribute as an entirely graphical concurrent processing language for supercomputers Graph data science is emerging as an expressive and illustrative data structure for optimally representing a variety of data types and their insightful relationships These data structures include graph query languages databases algorithms and platforms From here powerful analytics methods and machine learning deep learning ML DL algorithms are quickly evolving to analyze and make sense out of graph data As a result ground breaking use cases across scientific research topics and industry verticals are being developed using graph data representation and manipulation A wide range of complex business and scientific research requirements are efficiently represented and solved through graph data analysis and Applied Graph Data Science Graph Algorithms and Platforms Knowledge Graphs Neural Networks and Applied Graph Data Science gives readers both the conceptual foundations and technical methods for applying these powerful techniques Provides comprehensive coverage of the emerging paradigm of graph data science and its real world applications Gives readers practical guidance on how to approach and solve complex data analysis problems using graph data science with an emphasis on deep analysis techniques including graph neural networks GNNs machine learning algorithms graph databases and graph query languages Covers extended graph models such as bipartite directed graphs of place transition nets graphs with dynamical processes defined on them Petri and Sleptsov nets and graphs as programming languages Presents all the key tools and techniques as well as the foundations of graph theory including mathematical concepts research and graph analytics

Integrating Safety and Security Management to Protect Chemical Industrial Areas from Domino Effects Chao Chen, Genserik Reniers, Ming Yang, 2021-10-30 This book provides insight into domino effects in industrial chemical sites and process industries It is about the integration of safety and security resources to prevent and mitigate domino effects in the process industries It explains how chemical industrial areas comprised of various hazardous installations are susceptible to a chain of undesired events or domino effects triggered by accidental events or intentional attacks and then presents solutions to prevent them Firstly the book provides a dynamic graph approach to model the domino effects induced by accidental fire or intentional fire considering the spatial temporal evolution of fires Then a dynamic risk assessment method based on a discrete dynamic event tree is proposed to assess the likelihood of VCEs and the vulnerability of installations addressing the time dependencies in vapor cloud dispersion and the uncertainty of delayed ignitions A dynamic methodology based on dynamic graphs and Monte Carlo is provided to assess the vulnerability of individuals and installations exposed to multi hazards such as fire explosion and toxic release during escalation events Based on these domino effect models an economic approach is developed to integrate safe and security resources obtaining the most cost benefit protection strategy for preventing domino effects Finally a resilience based approach is provided to find out the most cost resilient way to protect chemical industrial areas addressing possible domino effects This integrated approach will be of interest to researchers industrial engineers chemical engineers and safety managers and will help professionals to new solutions in the area of
