Graphite Fibers And Filaments:

Graphite Fibers and Filaments Mildred S. Dresselhaus, Gene Dresselhaus, Ko Sugihara, Ian L. Spain, Harris A. Goldberg, 2013-03-08 This book was begun after three of the present authors gave a series of invited talks on the subject of the structure and properties of carbon filaments. This was at a conference on the subject of optical obscuration for which submicrometer diameter filaments with high length to diameter ratios have potential applications. The audience response to these talks illustrated the need of just one scientific community for a broader knowledge of the structure and properties of these interesting materials. Following the conference it was decided to expand the material presented in the conference proceedings. The aim was to include in a single volume a description of the physical properties of carbon fibers and filaments. The research papers on this topic are spread widely in the literature and are found in a broad assortment of physics, chemistry, materials science and engineering and polymer science journals and conference proceedings, some of which are obscure. Accordingly, our goal was to produce a book on the subject which would enable students and other researchers working in the field to gain an overview of the subject up to about 1987. Graphite Fibers and Filaments Mildred S. Dresselhaus, Gene Dresselhaus, Ko Sugihara, 1988-06-10 **Carbon Fibers Filaments and Composites** J.L. Figueiredo, Carlos A. Bernardo, R.T.K. Baker, K.J. Hüttinger, 2013-03-14 Conventional synthetic materials like metals, ceramics or glass are usually isotropic substances and their suitability for structural applications is achieved by morphological design and combination in the macroscopic scale. However, in modern engineering this is often not acceptable. As an alternative, the use of non-homogeneous anisotropic materials with significant stiffness and strength only in the directions these mechanical properties are really needed, can lead to enormous material and weight savings. This is the case of multiphase systems called composite materials. In these composites, different material parts are added and arranged geometrically under clearly designed and controlled conditions. Usually, a structure of fibers provides strength and stiffness and a matrix holds them together whilst providing the geometric form. Carbon fibers are among the high performance fibers employed in these advanced structural composites which are profoundly changing many of today's high technology industries. New research and development challenges in this area include upgrading the manufacturing process of fibers and composites in order to improve characteristics and reduce costs and modifying the interfacial properties between fibers and matrix to guarantee better mechanical properties. The interdisciplinary nature of this new frontier is obvious, involving chemistry, materials science, chemical and mechanical engineering. Other topics which more often are treated separately are also important for the understanding of the processes of fiber production. Carbon filaments is one such topic as the study of their mechanisms of nucleation and growth is clearly quite relevant to the production of vapour-grown carbon fibers. **Carbon Fibers and Their Composites** Peter Morgan, 2005-05-20 Most literature pertaining to carbon fibers is of a theoretical nature. Carbon Fibers and their Composites offers a comprehensive look at the specific manufacturing of carbon fibers and graphite fibers.

Interface Science and Composites Soo-Jin Park, Min-Kang Seo, 2011-07-18 The goal of Interface Science and Composites is to facilitate the manufacture of technological materials with optimized properties on the basis of a comprehensive understanding of the molecular structure of interfaces and their resulting influence on composite materials processes From the early development of composites of various natures the optimization of the interface has been of major importance While there are many reference books available on composites few deal specifically with the science and mechanics of the interface of materials and composites Further many recent advances in composite interfaces are scattered across the literature and are here assembled in a readily accessible form bringing together recent developments in the field both from the materials science and mechanics perspective in a single convenient volume The central theme of the book is tailoring the interface science of composites to optimize the basic physical principles rather than on the use of materials and the mechanical performance and structural integrity of composites with enhanced strength stiffness and fracture toughness or specific fracture resistance It also deals mainly with interfaces in advanced composites made from high performance fibers such as glass carbon aramid and some inorganic fibers and matrix materials encompassing polymers carbon metals alloys and ceramics Includes chapter on the development of a nanolevel dispersion of graphene particles in a polymer matrix Focus on tailoring the interface science of composites to

optimize the basic physical principles Covers mainly interfaces in advanced composites made from high performance fibers

Carbon Fibers Soo-Jin Park,2014-10-08 This book contains eight chapters that discuss the manufacturing methods surface treatment composite interfaces microstructure property relationships with underlying fundamental physical and mechanical principles and applications of carbon fibers and their composites Recently carbon based materials have received much attention for their many potential applications The carbon fibers are very strong stiff and lightweight enabling the carbon materials to deliver improved performance in several applications such as aerospace sports automotive wind energy oil and gas infrastructure defense and semiconductors However the use of carbon fibers in cost sensitive high volume industrial applications is limited because of their relatively high costs However its production is expected to increase because of its widespread use in high volume industrial applications therefore the methods used for manufacturing carbon fibers and carbon fiber reinforced composites and their structures and characteristics need to be investigated **Analysis of the Test**
