Hla Clab Ii Antigens A Comprehensive Review Of Structure And Function:

National Library of Medicine Current Catalog National Library of Medicine (U.S.), *HLA Class II Antigens* Bjarte G. Solheim, Erna Moller, Soldano Ferrone, 2012-12-06 This volume deals with the structure and function of molecules that have during the last decade turned out to have a central role in immune responses Transplantation antigens were discovered and characterized by Gorer about 50 years ago and the biological basis for the unequalled complexity of their variability between individuals within a species in spite of extreme conservation between species was the subject of intense research and discussion for many years During the days of belief in immune surveillance against spontaneously developing tumors it was suggested that histoincompatibility between members of one species would prevent cancer from being a contagious disease and thus a threat to the species Immunologists involved in human transplantation had to learn and care about the complexity especially after 1967 when it was found that HLA antigens were the products of the human MHC Rejection of HLA identical sib kidney grafts was so rare even in those days that cases of rejection were described in scientific papers International Books in Print, 1988 Archie Rugh, 1988 **Index Medicus**, 2002 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings **Index to Scientific & Technical Proceedings**, 1978 Monthly with annual cumulation Published conference literature useful both as current awareness and retrospective tools that allow searching by authors of individual papers as well as by editors Includes proceedings in all formats i e books reports journal issues etc Complete bibliographical information for each conference proceedings appears in section titled Contents of proceedings with accompanying category permuterm subject sponsor author editor meeting location and corporate indexes Contains abbreviations used in organizational and geographical names **Conference Papers Index**, 1987 Molecular Biology of HLA Class II Antigens Jack Silver, 1990-02-28 This publication covers the recent veritable explosion in knowledge regarding the genetic organization structure and function of the HLA class II region It deals with the nature of diversity of HLA class II alleles the molecular basis of this diversity and the mechanisms by which HLA class II expression is regulated Also addressed is the relationship of class II polymorphism to susceptibility to autoimmune diseases such as rheumatoid arthritis insulin dependent diabetes mellitus and pemphigus vulgaris The book presents information on allele specific oligonucleotide ASO probes and their use in identifying susceptible individuals It includes chapters which describe how cells transfected with HLA class II genes can be used for functional analysis An appendix representing a compilation of all the known DR DQ DQ sequences is included This serves as an excellent source of comparison of newly derived sequences This publication provides information on the enormous progress in the HLA field It is intended for both the established investigator and the beginner **HLA and MHC** Michael J. Browning, Andrew J. McMichael, 1996 This is a review of the major histocompatibility complex MHC and the role it plays in the immune response and in disease The emphasis throughout is on the human MHC but relevant animal studies are included to give a comprehensive review of the subject *HLA and Disease* Braun, 2019-07-23 This book discusses

the topic of the HLA antigen system Chapters discuss topics such as animal studies the possible mechanisms of HLA and disease associations statistical and genetic considerations the clinical use of HLA typing as well as the current status of HLA and disease associations

The HLA System in Clinical Transplantation Bjarte G. Solheim, Soldano Ferrone, Erna Möller, 2012-12-06 With this book we want to address young graduate students clinicians involved in transplantation and technicians in transplantation immunology laboratories The volume should give a comprehensive but basic up to date introduction to the structure function and clinical importance of the HLA system We believe that there is a need for such a survey and think that the present level of our knowledge is an optimal occasion for publication A significant number of questions have now been resolved and our knowledge has reached a level of sophistication that provides the basis for additional questions and answers Although the emphasis of this book is on the role of HLA antigens in clinical transplantation their involvement in other clinical contexts is also discussed The main focus is on the human MHC antigenic system but MHC systems in other species are described as they contribute to our understanding of the structural and functional characteristics of HLA antigens Some important issues related to laboratory techniques are also covered The contributors have a close affiliation to the field of transplantation immunology A majority have even been playing important roles in unraveling the HLA system and its functions We believe this has contributed significantly to the quality and clinical and practical relevance of the book As editors we drew up the principal guidelines and took care that the chapters can be read as separate entities although this invariably results in some overlapping

HLA and Disease Werner E. Braun, 2017 This book discusses the topic of the HLA antigen system Chapters discuss topics such as animal studies the possible mechanisms of HLA and disease associations statistical and genetic considerations the clinical use of HLA typing as well as the current status of HLA and disease associations

HLA and Disease William E. Braun, 1979

HLA in Health and Disease Robert Lechler, Anthony Warrens, 2000-05-09 This comprehensive and definitive work succeeds and expands on the highly successful HLA and Disease published in 1994 This new edition has been updated redesigned and reorganised into three sections making it an invaluable reference The introductory section summarises current knowledge on the structure function genetics and evolution of the HLA system It clarifies its complex and ever changing nomenclature and discusses the mechanisms underlying disease associations with HLA alleles The second section deals with the importance of HLA in the context of different clinical specialities Individual chapters describe the association between HLA polymorphism and each disease The final section features chapters on current laboratory practice in histocompatibility and tissue typing HLA in Health and Disease is essential reading for basic and clinical researchers working in immunology and immunogenetics transplantation medicine and autoimmunity It will also be of interest to anyone in the fields of rheumatology diabetology nephrology allergy dermatology neurology endocrinology cancer biology respiratory medicine haematology molecular biology and biochemistry

Structure and Function of the HLA Class I Molecules in Antigen Presentation Laszlo Pazmany, 1992 *The HLA System in Clinical Transplantation* Bjarte Gees Solheim, Soldano Ferrone, Erna Möller, 1992-12-08 With this book we want to address young graduate students clinicians involved in transplantation and technicians in transplantation immunology laboratories The volume should give a comprehensive but basic up to date introduction to the structure function and clinical importance of the HLA system We believe that there is a need for such a survey and think that the present level of our knowledge is an optimal occasion for publication A significant number of questions have now been resolved and our knowledge has reached a level of sophistication that provides the basis for additional questions and answers Although the emphasis of this book is on the role of HLA antigens in clinical transplantation their involvement in other clinical contexts is also discussed The main focus is on the human MHC antigenic system but MHC systems in other species are described as they contribute to our understanding of the structural and functional characteristics of HLA antigens Some important issues related to laboratory techniques are also covered The contributors have a close affiliation to the field of transplantation immunology A majority have even been playing important roles in unraveling the HLA system and its functions We believe this has contributed significantly to the quality and clinical and practical relevance of the book As editors we drew up the principal guidelines and took care that the chapters can be read as separate entities although this invariably results in some overlapping

HLA and Disease Robert Lechler, 1994 This text describes the genetics and products of the HLA region and their relationship to diseases including diabetes rheumatoid arthritis and SLE The statistical principles relevant to the design and interpretation of HLA and disease studies are presented in simple and accessible language

Immunobiology of HLA Class-I and Class-II Molecules J. J. van Rood, R.R.P. de Vries, 1984 *The HLA System* John Lee, 2012-12-06 This volume documents our growing understanding of the human major histocompatibility complex The application of this information is ever more important as the limits of transplantation continue to be reduced including the recent success of bone marrow transplantation between unrelated but closely matched individuals In addition the need to transfuse platelets in the face of immunologic barriers continues to challenge transfusion services Thus the serologic information summarized in this volume is essential for optimal patient care At the same time recombinant DNA technology has led to a revolution in our understanding of many aspects of basic biology Among the advances has been the initial characterization of the structure of some HLA loci While this will ultimately improve clinical services constant reference to serologic data is essential so that the powerful new techniques can be applied in the most effective ways The timing of the First Red Cross International Histocompatibility Workshop is fortunate as it brings together experts from around the world to address the state of the art

We are all grateful to Dr John Lee and his colleagues for organizing the workshop and for bringing together in this volume the material to be presented in Beijing during October 17-23, 1990. Leon W. Hoyer, M.D., *Evaluating Class I Human Leukocyte Antigen Structure-function Relationships Through Comparative Mass Spectrometric Analysis of HLA-B*15 Ligands*, Kiley Rae Prilliman, 1999.
