Holomorphic Spaces:

   Holomorphic Spaces Sheldon Jay Axler,John E. McCarthy,Donald Sarason,1998-05-28 Expository articles describing the role Hardy spaces Bergman spaces Dirichlet spaces and Hankel and Toeplitz operators play in modern analysis

   Hyperbolic Complex Spaces Shoshichi Kobayashi,2013-03-09 In the three decades since the introduction of the Kobayashi distance the subject of hyperbolic complex spaces and holomorphic mappings has grown to be a big industry This book gives a comprehensive and systematic account on the Carath odory and Kobayashi distances hyperbolic complex spaces and holomorphic mappings with geometric methods A very complete list of references should be useful for prospective researchers in this area   Spaces of Holomorphic Functions in the Unit Ball Kehe Zhu,2005-02-08 Can be used as a graduate text Contains many exercises Contains new results   **Quaternionic Hilbert Spaces and Slice Hyperholomorphic Functions** Daniel Alpay,Fabrizio Colombo,Irene Sabadini,2024-12-09 The purpose of the present book is to develop the counterparts of Banach and Hilbert spaces in the setting of slice hyperholomorphic functions Banach and Hilbert spaces of analytic functions in one or several complex variables play an important role in analysis and related fields Besides their intrinsic interest such spaces have numerous applications The book is divided into three parts In the first part some foundational material on quaternionic functions and functional analysis are introduced The second part is the core of the book and contains various types of functions spaces ranging from the Hardy spaces also in the fractional case to the Fock space extended to the case of quaternions The third and final part present some further generalization Researchers in functional analysis and hypercomplex analysis will find this book a key contribution to their field but also researchers in mathematical physics especially in quantum mechanics will benefit from the insights presented   **Complex Analysis and Spectral Theory** V. P. Havin,N. K. Nikol'skii,2006-12-08   **Complex Analysis on Infinite Dimensional Spaces** Sean Dineen,2012-12-06 Infinite dimensional holomorphy is the study of holomorphic or analytic func tions over complex topological vector spaces The terms in this description are easily stated and explained and allow the subject to project itself ini tially and innocently as a compact theory with well defined boundaries However a comprehensive study would include delving into and interacting with not only the obvious topics of topology several complex variables theory and functional analysis but also differential geometry Jordan algebras Lie groups operator theory logic differential equations and fixed point theory This diversity leads to a dynamic synthesis of ideas and to an appreciation of a remarkable feature of mathematics its unity Unity requires synthesis while synthesis leads to unity It is necessary to stand back every so often to take an overall look at one s subject and ask How has it developed over the last ten twenty fifty years Where is it going What am I doing I was asking these questions during the spring of 1993 as I prepared a short course to be given at Universidade Federal do Rio de Janeiro during the following July The abundance of suit able material made the selection of topics difficult For some time I hesitated between two very different aspects of infinite dimensional holomorphy the geometric algebraic theory associated

with bounded symmetric domains and Jordan triple systems and the topological theory which forms the subject of the present book **Geometry and Dynamics of Groups and Spaces** Mikhail Kapranov,Sergii Kolyada,Yu. I. Manin,Pieter Moree,Leonid Potyagailo,2008-03-05 Alexander Reznikov 1960 2003 was a brilliant and highly original mathematician This book presents 18 articles by prominent mathematicians and is dedicated to his memory In addition it contains an influential so far unpublished manuscript by Reznikov of book length The book further provides an extensive survey on Kleinian groups in higher dimensions and some articles centering on Reznikov as a person **Complex Analysis in Locally Convex Spaces** S. Dineen,2011-08-18 Complex Analysis in Locally Convex Spaces <u>The Dirichlet Space and Related Function Spaces</u> Nicola Arcozzi,Richard Rochberg,Eric T. Sawyer,Brett D. Wick,2019-09-03 The study of the classical Dirichlet space is one of the central topics on the intersection of the theory of holomorphic functions and functional analysis It was introduced about100 years ago and continues to be an area of active current research The theory is related to such important themes as multipliers reproducing kernels and Besov spaces among others The authors present the theory of the Dirichlet space and related spaces starting with classical results and including some quite recent achievements like Dirichlet type spaces of functions in several complex variables and the corona problem The first part of this book is an introduction to the function theory and operator theory of the classical Dirichlet space a space of holomorphic functions on the unit disk defined by a smoothness criterion The Dirichlet space is also a Hilbert space with a reproducing kernel and is the model for the dyadic Dirichlet space a sequence space defined on the dyadic tree These various viewpoints are used to study a range of topics including the Pick property multipliers Carleson measures boundary values zero sets interpolating sequences the local Dirichlet integral shift invariant subspaces and Hankel forms Recurring themes include analogies sometimes weak and sometimes strong with the classical Hardy space and the analogy with the dyadic Dirichlet space The final chapters of the book focus on Besov spaces of holomorphic functions on the complex unit ball a class of Banach spaces generalizing the Dirichlet space Additional techniques are developed to work with the nonisotropic complex geometry including a useful invariant definition of local oscillation and a sophisticated variation on the dyadic Dirichlet space Descriptions are obtained of multipliers Carleson measures interpolating sequences and multiplier interpolating sequences estimates are obtained to prove corona theorems **Introduction to Complex Hyperbolic Spaces** Serge Lang,2013-03-09 Since the appearance of Kobayashi s book there have been several re sults at the basic level of hyperbolic spaces for instance Brody s theorem and results of Green Kiernan Kobayashi Noguchi etc which make it worthwhile to have a systematic exposition Although of necessity I re produce some theorems from Kobayashi I take a different direction with different applications in mind so the present book does not super sede Kobayashi s My interest in these matters stems from their relations with diophan tine geometry Indeed if X is a projective variety over the complex numbers then I conjecture that X is hyperbolic if and only if X has only a finite number of rational points in every finitely generated field over the rational numbers There are also a number

of subsidiary conjectures related to this one These conjectures are qualitative Vojta has made quantitative conjectures by relating the Second Main Theorem of Nevan linna theory to the theory of heights and he has conjectured bounds on heights stemming from inequalities having to do with diophantine approximations and implying both classical and modern conjectures Noguchi has looked at the function field case and made substantial progress after the line started by Grauert and Grauert Reckziegel and continued by a recent paper of Riebesehl The book is divided into three main parts the basic complex analytic theory differential geometric aspects and Nevanlinna theory Several chapters of this book are logically independent of each other   **Harmonic Analysis on Commutative Spaces** Joseph Albert Wolf,2007 This study starts with the basic theory of topological groups harmonic analysis and unitary representations It then concentrates on geometric structure harmonic analysis and unitary representation theory in commutative spaces   *The Arithmetic and Geometry of Algebraic Cycles* B. Brent Gordon,James D. Lewis,Stefan Müller-Stach,Shuji Saito,Noriko Yui,2012-12-06 The NATO Advanced Study Institute on The Arithmetic and Geometry of Algebraic Cycles was held at the Banff Centre for Conferences in Banff Al berta Canada from June 7 until June 19 1998 This meeting was organized jointly with Centre de Recherches Mathematiques CRM Montreal as one of the CRM Summer schools which take place annually at the Banff Center The conference also served as the kick off activity of the CRM 1998 99 theme year on Number Theory and Arithmetic Geometry There were 109 participants who came from 17 countries Belgium Canada China France Germany Greece India Italy Japan Mexico Netherlands mania Russia Spain Switzerland the United Kingdom and the United States During a period of two weeks 41 invited lectures and 20 contributed lec tures were presented Four lectures by invited speakers were delivered every day followed by two sessions of contributed talks Many informal discussions and working sessions involving small groups were organized by individual partic ipants In addition participants reprints and preprints were displayed through out in a lounge next to the auditorium which further enhanced opportunities for communication and interaction   **Foundations of Complex Analysis in Non Locally Convex Spaces** A. Bayoumi,2003-11-11 All the existing books in Infinite Dimensional Complex Analysis focus on the problems of locally convex spaces However the theory without convexity condition is covered for the first time in this book This shows that we are really working with a new important and interesting field Theory of functions and nonlinear analysis problems are widespread in the mathematical modeling of real world systems in a very broad range of applications During the past three decades many new results from the author have helped to solve multiextreme problems arising from important situations non convex and non linear cases in function theory Foundations of Complex Analysis in Non Locally Convex Spaces is a comprehensive book that covers the fundamental theorems in Complex and Functional Analysis and presents much new material The book includes generalized new forms of Hahn Banach Theorem Multilinear maps theory of polynomials Fixed Point Theorems p extreme points and applications in Operations Research Krein Milman Theorem Quasi differential Calculus Lagrange Mean Value Theorems Taylor series Quasi holomorphic and

Quasi analytic maps Quasi Analytic continuations Fundamental Theorem of Calculus Bolzano s Theorem Mean Value Theorem for Definite Integral Bounding and weakly bounding limited sets Holomorphic Completions and Levi problem Each chapter contains illustrative examples to help the student and researcher to enhance his knowledge of theory of functions The new concept of Quasi differentiability introduced by the author represents the backbone of the theory of Holomorphy for non locally convex spaces In fact it is different but much stronger than the Frechet one The book is intended not only for Post Graduate M Sc The book contains new generalized versions of i Fundamental Theorem of Calculus Lagrange Mean Value Theorem in real and complex cases Hahn Banach Theorems Bolzano Theorem Krein Milman Theorem Mean value Theorem for Definite Integral and many others ii Fixed Point Theorems of Bruower Schauder and Kakutani s bull The book contains some applications in Operations research and non convex analysis as a consequence of the new concept p Extreme points given by the author bull The book contains a complete theory for Taylor Series representations of the different types of holomorphic maps in F spaces without convexity conditions bull The book contains a general new concept of differentiability stronger than the Frechet one This implies a new Differentiable Calculus called Quasi differential or Bayoumi differential Calculus It is due to the author s discovery in 1995 bull The book contains the theory of polynomials and Banach Stienhaus theorem in non convex spaces **Pick Interpolation and Hilbert Function Spaces** Jim Agler,John E. McCarthy,2023-02-22 The book first rigorously develops the theory of reproducing kernel Hilbert spaces The authors then discuss the Pick problem of finding the function of smallest H infty norm that has specified values at a finite number of points in the disk Their viewpoint is to consider H infty as the multiplier algebra of the Hardy space and to use Hilbert space techniques to solve the problem This approach generalizes to a wide collection of spaces The authors then consider the interpolation problem in the space of bounded analytic functions on the bidisk and give a complete description of the solution They then consider very general interpolation problems The book includes developments of all the theory that is needed including operator model theory the Arveson extension theorem and the hereditary functional calculus *Infinite Dimensional Kähler Manifolds* Alan Huckleberry,Tilmann Wurzbacher,2012-12-06 Infinite dimensional manifolds Lie groups and algebras arise naturally in many areas of mathematics and physics Having been used mainly as a tool for the study of finite dimensional objects the emphasis has changed and they are now frequently studied for their own independent interest On the one hand this is a collection of closely related articles on infinite dimensional K hler manifolds and associated group actions which grew out of a DMV Seminar on the same subject On the other hand it covers significantly more ground than was possible during the seminar in Oberwolfach and is in a certain sense intended as a systematic approach which ranges from the foundations of the subject to recent developments It should be accessible to doctoral students and as well researchers coming from a wide range of areas The initial chapters are devoted to a rather selfcontained introduction to group actions on complex and symplectic manifolds and to Borel Weil theory in finite dimensions These are followed by a

treatment of the basics of infinite dimensional Lie groups their actions and their representations Finally a number of more specialized and advanced topics are discussed e g Borel Weil theory for loop groups aspects of the Virasoro algebra gauge group actions and determinant bundles and second quantization and the geometry of the infinite dimensional Grassmann manifold   *Recent Progress in General Topology* M. Husek,J. van Mill,1992-11-20 These papers survey the developments in General Topology and the applications of it which have taken place since the mid 1980s The book may be regarded as an update of some of the papers in the Handbook of Set Theoretic Topology eds Kunen Vaughan North Holland 1984 which gives an almost complete picture of the state of the art of Set Theoretic Topology before 1984 In the present volume several important developments are surveyed that surfaced in the period 1984 1991 This volume may also be regarded as a partial update of Open Problems in Topology eds van Mill Reed North Holland 1990 Solutions to some of the original 1100 open problems are discussed and new problems are posed   Complex Analytic Geometry Gerd Fischer,2006-11-14

Computation and Applied Mathematics ,1994   **Geometry of Riemann Surfaces** William J. Harvey,Frederick P. Gardiner,Gabino González-Diez,Christos Kourouniotis,2010-02-11 Original research and expert surveys on Riemann surfaces

An Introduction to Riemann Surfaces Terrence Napier,Mohan Ramachandran,2011-09-08 This textbook presents a unified approach to compact and noncompact Riemann surfaces from the point of view of the so called L2 bar delta method This method is a powerful technique from the theory of several complex variables and provides for a unique approach to the fundamentally different characteristics of compact and noncompact Riemann surfaces The inclusion of continuing exercises running throughout the book which lead to generalizations of the main theorems as well as the exercises included in each chapter make this text ideal for a one or two semester graduate course
