Theories of Communication Networks Peter R. Monge, Noshir Contractor, 2003-03-27 To date most network research contains one or more of five major problems First it tends to be atheoretical ignoring the various social theories that contain network implications Second it explores single levels of analysis rather than the multiple levels out of which most networks are comprised Third network analysis has employed very little the insights from contemporary complex systems analysis and computer simulations Fourth it typically uses descriptive rather than inferential statistics thus robbing it of the ability to make claims about the larger universe of networks Finally almost all the research is static and cross sectional rather than dynamic *Theories of Communication Networks* presents solutions to all five problems The authors develop a multitheoretical model that relates different social science theories with different network properties This model is multilevel providing a network decomposition that applies the various social theories to all network levels individuals dyads triples groups and the entire network The book then establishes a model from the perspective of complex adaptive systems and demonstrates how to use Blanche an agent based network computer simulation environment to generate and test network theories and hypotheses It presents recent developments in network statistical analysis the p family which provides a basis for valid multilevel statistical inferences regarding networks Finally it shows how to relate communication networks to other networks thus providing the basis in conjunction with computer simulations to study the emergence of dynamic organizational networks

prosperous society **Social Justice and Islamic Economics** Toseef Azid, Lutfi Sunar, 2019-02-25 Under the rule of the current economic order social injustice is ever increasing. Issues such as poverty, inhumane working conditions, inadequate wages, social insecurity, and an unhealthy labor market continue to persist. Many states are also unable to produce policies capable of resolving these problems. The characteristics of the capitalist system currently render it unable to provide social justice. In fact, on the contrary, the system reinforces these injustices and prevents economic and social welfare from reaching the masses. Many Muslim scholars have analyzed and indeed criticized this system for years. This book argues that an alternative and more equitable theoretical and practical economical order can be developed within the framework of Islamic principles. On the other hand, the experiences of societies under the rule of Muslim governments do not always seem to hold great promise for an alternative understanding of social justice. In addition, the behaviors of Muslim individuals within their economic lives are mostly shaped by the necessities of daily economic conditions rather than by the tenets of Islam that stand with social justice. Until the 1990s, studies of Islamic economics made connections between finance and the notion of social justice, but work conducted more recently has neglected this issue. It is therefore evident that the topic of social justice needs to be revisited in a more in-depth manner. Filling an important gap in existing literature, the book uniquely connects social justice and Islamic finance and economics on this topic. Theory, practice, and key issues are presented simultaneously throughout this book, which is based on the writings of a number of eminent scholars.
