Robert B **Compostela (Tesseract Twenty)** Spider Robinson,James Alan Gardner,2017 *Compostela Tesseract Twenty* is an anthology of hard and soft science fiction stories that best represent a futuristic view of the sciences and how humanity might be affected for better or worse by a reliance in all things technological The stories contained within the pages of *Compostela* are a reflection of the world we live in today where science produces both wonders and horrors and will leave us with a future that undoubtedly will contain both Journeys to the stars may be exhilarating and mind expanding but they can also be dangerous or even tragic SF has always reflected that wide range of possibilities *Compostela Tesseract Twenty* features works by Canadian visionaries Alan Bao John Bell Chantal Boudreau Leslie Brown Tanya Bryan J R Campbell Eric Choi David Clink Paulo da Costa Miki Dare Robert Dawson Linda DeMeulemeester Steve Fahnstalk Jacob Fletcher Catherine Girczyc R Gregory Mary Jean Harris Geoffrey Hart Michaela Hiebert Matthew Hughes Guy Immega Garnet Johnson Koehn Michael Johnstone Cate McBride Lisa Ann McLean Rati Mehrotra Derryl Murphy Brent Nichols Susan Pieters Alexandra Renwick Rhea Rose Robert J Sawyer Thea van Diepen Nancy S M Waldman About the title of this anthology For more than 1 000 years Santiago de Compostela *Compostela* means field of stars has attracted pilgrims to walk to the cathedral that holds St James the apostle s relics The stories in this anthology in their own way tell the tale of futuristic travelers who journey into the dark outer or inner reaches of space searching for their own connections to the past present and future relics of their time

Empire of Poverty Julia McClure,2024-11-11 *Empire of Poverty* examines how changing concepts of poverty in the long sixteenth century helped shape the deep structures of states and empires and the contours of imperial inequalities While poverty is often understood to have become a political subject with the birth of political economy in the eighteenth century this book points to the longer history of poverty as a political subject and a more complicated relationship between moral and political economies It focuses upon the critical transformations taking place in the long sixteenth century with the emergence of the world s first global empire and the development of colonial capitalism The book

explores how the moral political economy of poverty defined as a new and changing conceptualisation of and approach to poverty across laws institutions and acts of resistance played a critical role in the development and governance of the Spanish Empire In so doing it offers insights into the negotiated nature of sovereignty the construction of inequalities and strategies of resistance Empire of Poverty explains how the combined processes of the transition to global capitalism and imperialism in the long sixteenth century wrought a moral crisis which led to the transformation of poverty and reconceptualization of the poor and how the newly emerging beliefs laws and institutions of poverty helped structure the inequalities of the new global order

The Sound of the Sea Cynthia Barnett, 2021-07-06 A Science Friday Best Science Book of the Year A Kirkus Reviews Best Nonfiction Book of the Year A Library Journal Best Science and Technology Book of the Year A Tampa Bay Times Best Book of the Year A stunning history of seashells and the animals that make them that will have you marveling at nature Barnett's account remarkably spirals out appropriately to become a much larger story about the sea about global history and about environmental crises and preservation John Williams New York Times Book Review Seashells have been the most coveted and collected of nature's creations since the dawn of humanity They were money before coins jewelry before gems art before canvas In *The Sound of the Sea* acclaimed environmental author Cynthia Barnett blends cultural history and science to trace our long love affair with seashells and the hidden lives of the mollusks that make them Spiraling out from the great cities of shell that once rose in North America to the warming waters of the Maldives and the slave castles of Ghana Barnett has created an unforgettable history of our world through an examination of the unassuming seashell She begins with their childhood wonder unwinds surprising histories like the origin of Shell Oil as a family business importing exotic shells and charts what shells and the soft animals that build them are telling scientists about our warming acidifying seas From the eerie calls of early shell trumpets to the evolutionary miracle of spines and spires and the modern science of carbon capture inspired by shell Barnett circles to her central point of listening to nature's wisdom and acting on what seashells have to say about taking care of each other and our world

Necroclimatism in a Spectral World (Dis)order? Nhemachena, Artwell, Mawere, Munyaradzi, 2019-06-25 Highlighting the problematiques of working with a narrow version of greenhouse effects or global warming this book posits the theory of necroclimatism that encompasses broader versions of greenhouse effects and global warming Conceiving cultures societies moral sensibilities epistemologies politics economies legal systems and religions of the formerly colonised peoples as greenhoused and entrapped in the heat of global apartheid and neo colonialism the book refuses to be confined to the pufferies of physical conceptualisations of greenhousing and global warming Underlining the supposed disposability and dispensability of colonised peoples the notion of necroclimatism explicates ways in which some people suffer various forms of death which have increasingly become a feature of global apartheid and neo colonialism that are cast in spectral sacrificial logics Deemed to constitute disposable bodies disposable cultures disposable politics disposable societies disposable epistemologies disposable religions disposable laws and disposable economies the sacrificed are in the age of climate catastrophism once again reminded that they have duties to die to become extinct in order to save the global spaceship that is sinking due to climate change and global warming This book therefore argues that in a sacrificial world dis order binaries between humans and animals good and evil moral and immoral the dead and the living necessarily vanish in the nefarious

logic of what marks the era of climate catastrophism and the attendant necroclimatism The book further argues that a sacrificial world dis order is necessarily a posthumanist and postanthropocentric world dis order which should be never granted space in African worlds and even beyond The book thus raises fundamental questions for African anticipatory regimes and for this reason it is handy for scholars in political science sociology social anthropology development studies environmental studies agricultural studies legal studies food science geography religious studies and decolonial fields of studies

Earth-Shattering Bob Berman, 2019-02-19 A heart pumping exploration of the biggest explosions in history from the Big Bang to mysterious activity on Earth and everything in between The overwhelming majority of celestial space is inactive and will remain forever unruffled Similarly more than 90 percent of the universe s 70 billion trillion suns had non attention getting births and are burning through their nuclear fuel in steady predictable fashion But when cosmic violence does unfold it changes the very fabric of the universe with mega explosions and ripple effects that reach the near limits of human comprehension From colliding galaxies to solar storms and gamma ray bursts to space and time warping upheavals these moments are rare yet powerful often unseen but consequentially felt Likewise here on Earth existence as we

know it is fragile always vulnerable to hazards both natural and manufactured As we've learned from textbooks and witnessed in Hollywood blockbusters existential threats such as biological disasters asteroid impacts and climate upheavals have the all too real power to instantaneously transform our routine centered lives into total chaos or much worse While we might be helpless to stop these catastrophes whether they originate on our own planet or in the farthest reaches of space the science behind such cataclysmic forces is as fascinating as their results can be devastating In *Earth Shattering* astronomy writer Bob Berman guides us through an epic all inclusive investigation into these instances of violence both mammoth and microscopic From the sudden creation of dazzling new stars to the furiously explosive birth of our moon from the uncomfortable truth about ultra high energy cosmic rays bombarding us to the incredible ways in which humanity has harnessed cataclysmic energy for its gain Berman masterfully synthesizes some of our worst fears into an astonishing portrait of the universe that promises to transform the way we look at the world's around us In the spirit of Neil deGrasse Tyson and Carlo Rovelli what emerges is a rollicking profound and even humbling exploration of all the things that can go bump in the night

Our Fragile Moment Michael E. Mann, 2023-09-26 In this sweeping work of science and history the renowned climate scientist and author of *The New Climate War* shows us the conditions on Earth that allowed humans not only to exist but thrive and how they are imperiled if we veer off course For the vast majority of its 4.54 billion years Earth has proven it can manage just fine without human beings Then came the first proto humans who emerged just a little more than 2 million years ago a fleeting moment in geological time What is it that made this benevolent moment of ours possible Ironically it's the very same thing that now threatens us climate change The drying of the tropics during the Pleistocene period created a niche for early hominids who could hunt prey as forests gave way to savannahs in the African tropics The sudden cooling episode known as the Younger Dryas 13,000 years ago which occurred just as Earth was thawing out of the last Ice Age spurred the development of agriculture in the fertile crescent The Little Ice Age cooling of the 16th-19th centuries led to famines and pestilence for much of Europe yet it was a boon for the Dutch who were able to take advantage of stronger winds to shorten their ocean voyages The conditions that allowed humans to live on this earth are fragile incredibly so Climate variability has at times created new niches that humans or their ancestors could potentially exploit and challenges that at times have spurred innovation But there's a relatively narrow envelope of climate variability within which human civilization remains viable And our survival depends on conditions remaining within that range In this book renowned climate scientist Michael Mann will arm readers with the knowledge necessary to appreciate the gravity of the unfolding climate crisis while emboldening them and others to act before it truly does become too late
