Great Stone Architects:

Building the Great Stone Circles of the North Colin Richards, 2013-11-30 Of all prehistoric monuments few are more emotive than the great stone circles that were built throughout Britain and Ireland From the tall elegant pointed monoliths of the Stones of Stenness to the grandeur of Stonehenge and the sarsen blocks at Avebury circles of stone exert a magnetic fascination to those who venture into their sphere In Britain today more people visit these structures than any other form of prehistoric monument and visitors stand in awe at their scale and question how and why they were erected Building the Great Stone Circles of the North looks at the enigmatic stone structures of Scotland and investigates the background of their construction and their cultural significance

New Stone Architecture David Dernie, 2003 A discussion of stone construction and the nature of stone as a material Aimed at practising architects and students this study describes the new technologies that make the new stone forms possible This is followed by 33 case studies from around the world

The Architecture of America's Stonehenge Mary E. Gage, 2021-06-01 The main complex of the America's Stonehenge site in New Hampshire is a collection of stone chambers enclosures niches standing stones carved drains basins and astronomical alignments The archaeological community has largely dismissed this seemingly eclectic collection of structures as the work of an eccentric farmer named Jonathan Pattee who built his house on top of the ruins in the 19th century Other researchers have sought to compare the chambers and astronomical alignments to stone structures from around the world built by other ancient peoples No one has thought to evaluate the site on its own merits specifically evaluating its architecture Architecture can tell you a lot about a culture Using this approach the author unravels the mystery surrounding the site This architectural study revealed the site was built in a series of distinct phases each with its own unique style while at the same time incorporating key concepts and ideas from previous phases There is a clear evolution of building skills and cultural ideas that can be followed through the architectural build out of the site Because key features and ideas were carried forward from one phase to the next we now know that the site was the work of a single culture over a several thousand year period Stone tools and pottery recovered from archaeological excavations at the site confirm that the builders were Native Americans The idea of Native Americans building stone structures for ceremonial and spiritual purposes has gained a lot of credibility over the past twenty five years There is mounting evidence that hundreds of ceremonial stone landscapes CSL with stone cairns niches enclosures standings stones chambers and astronomical alignments found throughout northeastern United States are part of a broad based Native American cultural tradition The America's Stonehenge site is one of the most sophisticated and culturally complex of these sacred ceremonial places The second part of this book uses primary source materials like deeds town records court cases and genealogy to reconstruct the history of the Pattee family who owned the hill where the site is found from 1739 through 1863 The Pattees started out in the 1700s as a prosperous family with a house in North Salem village and a 248 acre farm By the 1820s the third generation was

reduced to owning 15 acres of the original farm and living in a small house built on top of the ruins of the site Despite his many financial misfortunes Jonathan Pattee third generation managed to hold on to and protect the site *The Ecclesiastical Architecture of Scotland: First pointed period ; Middle pointed or decorated period* David MacGibbon, Thomas Ross, 1896 *Treatise on Architecture* Arthur Ashpitel, 1867 *The Civil engineer & [and] architect's journal*, 1860

Stone Architecture in Santa Barbara, 2009 Building with stone requires a commitment to permanence like the extraordinary almost citywide conviction of builders in Santa Barbara from the 1870s through the 1930s As Santa Barbara was evolving from a dusty little port and outlying resort into a vibrant and growing city there occurred an extraordinary era of stone construction This was made possible by a fortuitous conjunction of factors abundant material a cadre of expert artisans and almost unlimited financing This period provided an atmosphere not only conducive to the building of public spaces homes bridges walls and an assortment of other stonework but encouraged some exceptional expressions of the stoneworkers art Many of these artistic fabrications remain a testimony to the skills and tastes of their creators and add a distinctive element to the particular ambiance that makes Santa Barbara the special place that it is *The Architectural Review*, 1905 **Imagining Babylon** Mario Liverani, 2016-07-11 Ever since the archaeological rediscovery of the Ancient Near East generations of scholars have attempted to reconstruct the real Babylon known to us before from the evocative biblical account of the Tower of Babel After two centuries of excavations and scholarship Mario Liverani provides an insightful overview of modern Western approaches theories and accounts of the ancient Near Eastern city *The Surveyor, Engineer, and Architect*, 1841 *Modern Architecture* Frank Lloyd Wright, 2021-07-13 Frank Lloyd Wright's classic account of his vision for an organic architecture in a beautifully designed new edition *Modern Architecture* is a landmark text the first book in which America's greatest architect put forth the principles of a fundamentally new organic architecture that would reject the trappings of historical styles while avoiding the geometric abstraction of the machine aesthetic advocated by contemporary European modernists One of the most important documents in the development of modern architecture and the career of Frank Lloyd Wright *Modern Architecture* is a provocative and profound polemic against America's architectural eclecticism commercial skyscrapers and misguided urban planning The book is also a work of savvy self promotion in which Wright not only advanced his own concept of an organic architecture but also framed it as having anticipated by decades and bettered what he saw as the reductive modernism of his European counterparts Based on the 1931 original for which Wright supplied the cover illustration this beautiful edition includes a new introduction that puts *Modern Architecture* in its broader architectural historical and intellectual context for the first time The subjects of these lively lectures from *Machinery Materials and Men to The Tyranny of the Skyscraper and The City* move from a general statement of the conditions of modern culture to particular applications in the fields of architecture and urbanism at ever broadening scales Wright's vision in *Modern Architecture* is ultimately to equate the truly modern with romanticism imagination beauty and nature all of which
