Prince, 2003-05-21 This book presents six visionary essays on the past present and future of the chemical and process industries together with a critical commentary Our world is changing fast and the visions explore the implications for business and academic institutions and for the professionals working in them The visions were written and brought together for the 6th World Congress of Chemical Engineering in Melbourne Australia in September 2001 Identifies trends in the chemicals business environment and their consequences Discusses a wide variety of views about business and technology Describes the impact of newly developing technologies

One Hundred Years of Chemical Engineering Nicholas A. Peppas, 2012-12-06 One hundred years ago in September 1888 Professor Lewis Mills Norton 1855 1893 of the Chemistry Department of the Massachusetts Institute of Technology introduced to the curriculum a course on industrial chemical practice This was the first structured course in chemical engineering taught in a University Ten years later Norton's successor Frank H Thorpe published the first textbook in chemical engineering entitled Outlines of Industrial Chemistry Over the years chemical engineering developed from a simple industrial chemical analysis of processes into a mature field The volume presented here includes most of the commissioned and contributed papers presented at the American Chemical Society Symposium celebrating the centenary of chemical engineering The contributions are presented in a logical way starting first with the history of chemical engineering followed by analyses of various fields of chemical engineering and concluding with the history of various U S and European Departments of Chemical Engineering I wish to thank the authors of the contributions chapters of this volume for their enthusiastic response to my idea of publishing this volume and Dr Gianni Astarita of the University of Naples Italy for his encouragement during the initial stages of this project

Chemistry in America 1876-1976 A. Thackray, J.L. Sturchio, P.T. Carroll, R.F. Bud, 2012-12-06 This study is an outgrowth of our interest in the history of modern chemistry The paucity of reliable quantitative knowledge about past science was brought home forcibly to us when we undertook a research seminar in the comparative history of modern chemistry in Britain Germany and the United States That seminar which took place at the University of Pennsylvania in the spring of 1975 was paralleled by one devoted to the work of the Annales School The two seminars together catalyzed the attempt to construct historical measures of change in aspects of one science or chemical indicators The present volume displays our results Perhaps our labors may be most usefully compared with the work of those students of medieval science who devote their best efforts to the establishment of texts Only when acceptable texts have been constructed from fragmentary and corrupt sources can scholars move on to the more satisfying business of making history So too in the modern period a necessary preliminary to the full history of any scientific profession is the establishing of reliable quantitative information in the form of statistical series This volume does not offer history Instead it provides certain element indicators that may be useful to individuals interested in the history of American chemistry and chemical

Igniting The Chemical Ring Of Fire: Historical Evolution Of The Chemical Communities Of The Pacific Rim Seth C Rasmussen,2018-01-18 From the rise of chemical technology in antiquity to the present day Igniting the Chemical Ring of Fire tracks the development of professional chemistry communities in the countries of the Pacific Rim Critical in this process was the development of local education and training in chemistry The doctorate in chemistry is generally regarded as coming into existence in early 19th century Germany with the model spreading globally as time passed In early years it was common for international chemistry scholars to train at the ranking German or English universities before returning to their home countries to seed a local version of the doctorate However little has been formally written about this process outside of Europe Representing a first in the field for countries of the Pacific Rim this book documents the detailed history of chemical communities in ten countries from a team of internationally renowned historians Providing insights into how and when these countries initiated local chemistry PhD programs and became independent chemical entities Igniting the Chemical Ring of Fire shows that there is no single path to development

Computational Science and Its Applications - ICCSA 2004 Antonio Laganà, Marina L. Gavrilova, Vipin Kumar, Youngsong Mun, C.J. Kenneth Tan, Osvaldo Gervasi, 2004-05-21 The natural mission of Computational Science is to tackle all sorts of human problems and to work out intelligent automata aimed at alleviating the burden of working out suitable tools for solving complex problems For this reason Computational Science though originating from the need to solve the most challenging problems in science and engineering computational science is the key player in the fight to gain fundamental advances in astronomy biology chemistry environmental science physics and several other scientific and engineering disciplines is increasingly turning its attention to all fields of human activity In all activities in fact intensive computation information handling knowledge synthesis the use of ad hoc devices etc increasingly need to be exploited and coordinated regardless of the location of both the users and the various and heterogeneous computing platforms As a result the key to understanding the explosive growth of this discipline lies in two adjectives that more and more appropriately refer to Computational Science and its applications interoperable and ubiquitous Numerous examples of ubiquitous and interoperable tools and applications are given in the present four LNCS volumes containing the contributions delivered at the 2004 International Conference on Computational Science and its Applications ICCSA 2004 held in Assisi Italy

May 14 17 2004 Explosive Effects and Applications Jonas A. Zukas, William Walters, 2013-12-01 This is a broad based text on the fundamentals of explosive behavior and the application of explosives in civil engineering industrial processes aerospace applications and military uses **Library of Congress Catalogs** Library of Congress, **Technology and the Wealth of Nations** ,1992-10 Most discussions of U S economic competitiveness focus on the creation of new technologies but the abundant evidence presented in this timely book indicates that the key factor underpinning U S competitiveness is not the development of technology itself but the factors that influence the commercialization of technology The importance of effective management and performance in the commercialization of new technologies reflects today s changing environment The post war decades of undisputed U S scientific and technological hegemony have been replaced by a period in which U S firms are challenged by foreign competitors in some fields and struggling to regain their former positions in others Although the U S scientific research establishment arguably has lost little if any of its post war preeminence the same cannot be said with respect to the performance of U S firms as developers adapters and managers of new technologies largely because government policies have not been conducive to successful commercialization of technology As we enter the last decade of the twentieth century economic policy and performance are being linked more and more closely to technology related issues Technology commercialization is now recognized as critical to this linkage and this book constitutes a state of the art analysis of this vital but often overlooked aspect of technological innovation The sixteen papers in this volume contribute to three important tasks First they draw on new developments in theoretical and empirical analysis to integrate the macro and microeconomic dimensions of technological innovation and commercialization Second they extend and enrich the macroeconomic analysis of growth capital formation and international economic interactions to highlight the influences of macroeconomic variables on technology commercialization Technology and capital investment are shown to be complementary inputs to the growth process which means that favorable investment conditions are prerequisites for higher growth rates Third they also extend and enrich the microeconomic analysis of technological innovation and commercialization in the process providing guidance for managers seeking to improve performance in both of the areas A Series Catalog Richard Abel & Company,1973
