Crude Capitalism Adam Hanieh, 2024-09-17 A groundbreaking history of oil and its importance to US politics finance militarism and consumerism from an award winning author and scholar This expansive history traces the hidden connections between oil and capitalism from the late 1800s to the current climate crisis Beyond simplistic narratives that frame oil as prize or curse *Crude Capitalism* uncovers the surprising ways that oil is woven into the fabric of our modern world the rise of an American centered global order the breakdown of Empire and anti colonial rebellion contemporary finance and US dollar hegemony debt and militarism and the emergence of new forms of synthetic consumption Much more than an energy source or transport fuel oil has a foundational place in all aspects of contemporary life no challenge to the fossil fuel industry can be effective without taking this fact seriously *Crude Capitalism* maps the varied geographies of oil including the rise of OPEC the importance of revolutionary and Post Soviet Russia the crucial role of African upstream reserves and the new petrochemical circuits that link the Middle East China and East Asia The book provides an original and fine grained empirical analysis of corporate ownership and control including refining and petrochemicals By exposing these structures of power and placing oil in capitalism the book makes an essential contribution to debates around oil dependency and the struggle for climate justice

The Light-Green Society Michael Bess, 2003-11-15 The accelerating interpenetration of nature and culture is the hallmark of the new light green social order that has emerged in postwar France argues Michael Bess in this penetrating new history On one hand a preoccupation with natural qualities and equilibrium has increasingly infused France's economic and cultural life On the other human activities have laid an ever more potent and pervasive touch on the environment whether through the intrusion of agriculture industry and urban growth or through the much subtler and more well intentioned efforts of ecological management The

Light Green Society limns sharply these trends over the last fifty years The rise of environmentalism in the 1960s stemmed from a fervent desire to save wild nature nature conceived as a qualitatively distinct domain wholly separate from human designs and endeavors And yet Bess shows after forty years of environmentalist agitation much of it remarkably successful in achieving its aims the old conception of nature as a separate sphere has become largely untenable In the light green society where ecology and technological modernity continually flow together a new hybrid vision of intermingled nature culture has increasingly taken its place

Global Environmental History Ian G Simmons, 2008-03-05 Courses which deal with environmental history have long lacked a comprehensive overview I G Simmons has made a significant contribution with a book that looks at the long term history of environment and humanity from 10 000 BC to AD 2000 This far reaching text considers the global picture and recognises the contributions of many disciplines including the natural sciences the social sciences and increasingly the humanities As a starting point this book takes the major phases of human technological evolution of the last 12 000 years and considers how these have affected the natural world It then considers the response to conditions such as climate change putting today s preoccupations into a long term perspective This is a book of history not prophecy and so makes no judgements on current anxieties

Climate and the Making of Worlds Tobias Menely, 2021-06-25 Winner of the Society for Literature Science and the Arts Michelle Kendrick Memorial Book Prize and the Center for Robert Penn Warren Studies Warren Brooks Award In this book Tobias Menely develops a materialist ecocriticism tracking the imprint of the planetary across a long literary history of poetic rewritings and critical readings which continually engage with the climate as a condition of human world making Menely s central archive is English poetry written between John Milton s Paradise Lost 1667 and Charlotte Smith s Beachy Head 1807 a momentous century and a half during which Britain emerging from a crisis intensified by the Little Ice Age established the largest empire in world history and instigated the Industrial Revolution Incorporating new sciences into ancient literary genres these ambitious poems aspired to encompass what the eighteenth century author James Thomson called the system entire Thus they offer a unique record of geohistory Britain s epochal transition from an agrarian society buffeted by climate shocks to a modern coal powered nation Climate and the Making of Worlds is a bracing and sophisticated contribution to ecocriticism the energy humanities and the prehistory of the Anthropocene

Energy Humanities. Current State and Future Directions Matúš Mišík, Nada Kujundžić, 2020-11-02 This edited book explicitly deals with the energy humanities summarising existing knowledge in the area and outlining possible future directions for the nascent field Assuming a variety of disciplinary stances and using a plethora of methodologies to address a number of pressing energy related issues the individual contributions showcase the crucial importance of including the humanities and social sciences into the current discussion on energy Furthermore they illustrate one of the central claims of the energy humanities namely that energy permeates all aspects of our contemporary modes of existence and is inextricably linked with historical political social ideological and cultural issues relationships and

practices Through numerous case studies Energy Humanities and Energy Transition looks to the past present and future in search of examples of best practices and possible models for pathways to a successful energy transition and life after oil While much of existing research on energy humanities has been criticised for its excessive focus on oil this book considers a wide range of energy resources including nuclear energy renewables and natural gas Furthermore it brings to the forefront under researched topics such as the colonial legacy inscribed in energy infrastructure and the energy history of the humanities The contributions in this volume explore not only how the perspectives and expertise of the humanities and social sciences can alter the discourse on energy transition and our way of thinking about possible solutions and future scenarios but also how their new focus on energy affects the disciplines themselves Energy Humanities and Energy Transition presents a variety of theories methods topics and disciplinary angles meaning it will be of interest to a wide audience from practitioners and policy makers to students and researchers working across the humanities and social sciences The thematically oriented structure distinct focus of each individual chapter and the comprehensive introduction and conclusion that contextualize the contributions within the wider framework of energy transition make this edited book accessible to readers from many different fields and suitable for various university programs *Racing to the Top* William R.

Thompson, Leila Zakhirova, 2019 In the international political economy of the last two millennia there tends to be one state leading the world as the foremost producer of energy and new technology In *Racing to the Top* William R. Thompson and Leila Zakhirova argue that the US and China like previous leading countries rely on energy transition or the development of alternative energy in order to make new technology relatively inexpensive to develop and to fuel While the US has historically held the lead its edge in the global energy economy appears to be eroding and as energy leadership diminishes so does the country's position in world politics Thompson and Zakhirova take a long view in order to show what will be necessary for a new power to emerge as the system leader then map a path forward for energy policy Informed by a deep knowledge of world history political economy and environmental technology this book is the first complete overview of energy transitions over the past thousand years **The Metabolic Pattern of Societies** Mario Giampietro, Kozo

Mayumi, Alevgül Sorman, 2011-10-12 It is increasingly evident that the conventional scientific approach to economic processes and related sustainability issues is seriously flawed No economist predicted the current planetary crisis even though the world has now undergone five severe recessions primed by dramatic increases in the price of oil This book presents the results of more than twenty years of work aimed at developing an alternative method of analysis of the economic process and related sustainability issues it is possible to perform an integrated and comprehensive analysis of the sustainability of socio economic systems using indicators and variables that have been so far ignored by conventional economists The book's innovative approach aims to provide a better framework with which we can face the predicaments of sustainability issues It begins by presenting practical examples of the shortcomings of conventional economic analysis and

examines the systemic problems faced when trying to use quantitative analysis for governance In providing a critical appraisal of current applications of economic narratives to the issue of sustainability the book presents several innovative concepts required to generate a post Newtonian approach to quantitative analysis in the Musiasem approach An empirical section illustrates the results of an analysis of structural changes in world and EU countries Finally the book using the insight gained in the theoretical and empirical analysis exposes the dubious quality of many narratives currently used in the sustainability debate Overall the performance of modern economies across different hierarchical levels of organization and across different disciplinary knowledge systems is fully analyzed and a more realistic measure of happiness and well being is devised The book should be of interest to researchers and students looking at the issue of sustainability within a variety of disciplines

The Biofuel Delusion Mario Giampietro,Kozo Mayumi,2009-09-02 Faced with the twin threats of peak oil and climate change many governments have turned for an answer to the apparent panacea of biofuels Yet increasingly the progressive implementation of this solution demonstrates that the promise of biofuels as a replacement to fossil fuels is in fact a mirage that if followed risks leaving us short of power short of food and doing as much damage to the climate as ever let alone the consequent impact on biodiversity due to additional loss of habitat for agricultural production and on rural development due to the additional stress on traditional farming systems Worse still these risks are being ignored In this definitive expos Mario Giampietro and Kozo Mayumi present a theoretical framework and exhaustive evidence for the case against large scale biofuel production from agricultural crops This book will be vital sobering reading for anyone concerned with energy or agricultural policy or bioenergy as a complex system

The Routledge Handbook of the Anthropology of Labor Sharryn Kasmir,Lesley Gill,2022-06-01 The Routledge Handbook of the Anthropology of Labor offers a cross cultural examination of labor around the world and presents the breadth of a growing and vital subfield of anthropology As we enter a new crisis ridden age some laboring people are protected while others face impoverishment and death as they work in unsafe conditions migrate to gain livelihoods languish in the unwaged sector and become targets of law enforcement The contributions to this volume address questions surrounding the categorization and visibility of work the relationship of labor to the state and how divisions of labor map onto racial gendered sexual and national inequalities In addition to the emotional dimensions and subjectivities of labor the book also examines how laborers can articulate common experiences and identities build organizational forms and claim power together Bringing together the work of an impressive group of international scholars this Handbook is essential for anthropologists with an interest in labor and political economy as well as useful for scholars and students in related fields such as sociology and geography

The Social Metabolism Manuel González de Molina,Víctor M. Toledo,2014-06-30 Over this last decade the concept of Social Metabolism has gained prestige as a theoretical instrument for the required analysis to such an extent that there are now dozens of researchers hundreds of articles and several books that have adopted and use this concept However there is a great deal of variety in terms of

definitions and interpretations as well as different methodologies around this concept which prevents the consolidation of a unified field of new knowledge The fundamental aim of the book is to conduct a review of the past and present usage of the concept of social metabolism its origins and history as well as the main currents or schools that exist around this concept At the same time the reviews and discussions included are used by the authors as starting points to draw conclusions and propose a theory of socio ecological transformations The theoretical and methodological innovations of this book include a distinction of two types of metabolic processes tangible and intangible the analysis of the social metabolism at different scales in space and time and a theory of socio ecological change overcoming the merely systemic or cybernetic nature of conventional approaches giving special protagonism to collective action

Multi-Scale Integrated Analysis of Agroecosystems Mario Giampietro,2003-11-24 Ecologists agronomists and others who may question the validity of current models for determining sustainable growth of agroecosystems need a new set of analytical tools that more effectively address the complex nature of related processes Those who challenge traditional assumptions of optimization and static factors in agricultural modeling de

The Empathic Civilization Jeremy Rifkin,2009-12-31 One of the leading big picture thinkers of our day Utne Reader delivers his boldest work in this erudite tough minded and far reaching manifesto Never has the world seemed so completely united in the form of communication commerce and culture and so savagely torn apart in the form of war financial meltdown global warming and even the migration of diseases No matter how much we put our minds to the task of meeting the challenges of a rapidly globalizing world the human race seems to continually come up short unable to muster the collective mental resources to truly think globally and act locally In his most ambitious book to date bestselling social critic Jeremy Rifkin shows that this disconnect between our vision for the world and our ability to realize that vision lies in the current state of human consciousness The very way our brains are structured disposes us to a way of feeling thinking and acting in the world that is no longer entirely relevant to the new environments we have created for ourselves The human made environment is rapidly morphing into a global space yet our existing modes of consciousness are structured for earlier eras of history which are just as quickly fading away Humanity Rifkin argues finds itself on the cusp of its greatest experiment to date refashioning human consciousness so that human beings can mutually live and flourish in the new globalizing society In essence this shift in consciousness is based upon reaching out to others But to resist this change in human relations and modes of thinking Rifkin contends would spell ineptness and disaster in facing the new challenges around us As the forces of globalization accelerate deepen and become ever more complex the older faith based and rational forms of consciousness are likely to become stressed and even dangerous as they attempt to navigate a world increasingly beyond their reach and control Indeed the emergence of this empathetic consciousness has implications for the future that will likely be as profound and far reaching as when Enlightenment philosophers upended faith based consciousness with the canon of reason

Carbon Capitalism Tim Di Muzio,2015-08-31 Modern civilization and the social reproduction of

capitalism are bound inextricably with fossil fuel consumption. But as carbon energy resources become scarcer, what implications will this have for energy intensive modes of life? Can renewable energy sustain high levels of accumulation? Or will we witness the end of existing capitalist economies? This book provides an innovative and timely study that mobilizes a new theory of capitalism to explain the rise and fall of petro market civilization. Di Muzio investigates how theorists of political economy have largely taken energy for granted and illuminates how the exploitation of fossil fuels increased the universalization and magnitude of capital accumulation. He then examines the likelihood of renewable resources providing a feasible alternative and asks whether they can beat peak oil prices to sustain food production, health care, science, and democracy. Using the capital as power framework, this book considers the unevenly experienced consequences of monetizing fossil fuels for people and the planet.

Global Magic Alf Hornborg, 2016-04-08. Modern thought on economics and technology is no less magical than the world views of non modern peoples. This book reveals how our ideas about growth and progress ignore how money and machines throughout history have been used to exploit less affluent parts of world society. The argument critically explores a middle ground between Marxist political ecology and Actor Network Theory.

Global Ecology and Unequal Exchange Alf Hornborg, 2012-03-29. In modern society we tend to have faith in technology. But is our concept of technology itself a cultural illusion? This book challenges the idea that humanity as a whole is united in a common development toward increasingly efficient technologies. Instead, it argues that modern technology implies a kind of global zero sum game involving uneven resource flows which make it possible for wealthier parts of global society to save time and space at the expense of humans and environments in the poorer parts. We tend to think of the functioning of machines as if it was detached from the social relations of exchange which make machines economically and physically possible in some areas. But even the steam engine that was the core of the Industrial Revolution in England was indissolubly linked to slave labour and soil erosion in distant cotton plantations. And even as seemingly benign a technology as railways have historically saved time and accessed space primarily for those who can afford them but at the expense of labour time and natural space lost for other social groups with less purchasing power. The existence of technology in other words is not a cornucopia signifying general human progress but the unevenly distributed result of unequal resource transfers that the science of economics is not equipped to perceive. Technology is not simply a relation between humans and their natural environment but more fundamentally a way of organizing global human society. From the very start it has been a global phenomenon which has intertwined political, economic, and environmental histories in complex and inequitable ways. This book unravels these complex connections and rejects the widespread notion that technology will make the world sustainable. Instead, it suggests a radical reform of money which would be as useful for achieving sustainability as for avoiding financial breakdown. It brings together various perspectives from environmental and economic anthropology, ecological economics, political ecology, world system analysis, fetishism theory, semiotics, environmental and economic history, and development theory. Its main contribution

is a new understanding of technological development and concerns about global sustainability as questions of power and uneven distribution ultimately deriving from the inherent logic of general purpose money It should be of interest to students and professionals with a background or current engagement in anthropology sustainability studies environmental history economic history or development studies
