One) Libb Thims, 2007-09-01 Human chemistry is the study of bond forming and bond breaking reactions between people and the structures they form People often speak of having either good or bad chemistry together whereby according to consensus the phenomenon of love is a chemical reaction The new science of human chemistry is the study of these reactions

Historically human chemistry was founded with the 1809 publication of the classic novella Elective Affinities by German

polymath Johann von Goethe a chemical treatise on the origin of love Goethe based his human chemistry on Swedish chemist Torbern Bergman's 1775 chemistry textbook *A Dissertation on Elective Attractions* which itself was founded on Isaac Newton's 1687 supposition that the cause of chemical phenomena may all depend upon certain forces by which the particles of bodies by some causes hitherto unknown are either mutually impelled towards each other and cohere in regular figures or are repelled and recede from one another which thus defines life **Appleton's Literary Bulletin** ,1843 *American Publishers' Circular and Literary Gazette* ,1858
