The Postmortem Brain in Psychiatric Research Galila Agam, Ian P. Everall, Robert Haim Belmaker, 2013-03-09 Because of the dearth of experimental animal models of psychiatric disorders the study of the effect of the disease state is only possible in tissue derived from patients vs controls especially in the target tissue of disease related changes in the brain The human postmortem brain offers the most appropriate experimental paradigm towards understanding the etiology of psychiatric disorders The availability of post mortem human samples from psychiatric patients and comparison groups in recent years has contributed prominently to the accumulating body of information leading to a better understanding of these disorders This is the first book to summarize this research approach and the meaningful data which has recently been acquired

Molecular and Cellular Methods in Developmental Toxicology George P. Daston, 2019-04-30 This new manual provides a convenient source of experimental procedures including the most modern and frequently used molecular and cellular techniques Experimental protocols have been carefully selected by developmental toxicologists for developmental toxicologists The most important new trends such as evaluation of the safety of therapeutic antisense oligonucleotides studies of the role of cell death in abnormal development and the identification of sparingly expressed developmental control genes are featured This is the perfect manual for scientists trained in classical developmental toxicology who want to add
