Innovation Diffusion as a Spatial Process, Postscript and Translation by Allan Pred Torsten Hägerstrand, 1967

Innovation diffusion as a spatial process, postscript and translation Torsten Hägerstrand, *Key Texts in Human Geography* Phil Hubbard, Rob Kitchin, Gill Valentine, 2008-05-19 A book that will delight students Key Texts in Human Geography is a primer of 26 interpretive essays designed to open up the subject's landmark monographs of the past 50 years to critical interpretation The essays are uniformly excellent and the enthusiasm of the authors for the project shines through It will find itself at the top of a thousand module handouts THE Textbook Guide Will surely become a key text itself Read any chapter and you will want to compare it with another Before you realize an afternoon is gone and then you are tracking down the originals Professor James Sidaway University of Plymouth An essential synopsis of essential readings that every human geographer must read It is highly recommended for those just embarking on their careers as well as those who need a reminder of how and why geography moved from the margins of social thought to its very core Barney Warf Florida State University Undergraduate geography students are often directed to key texts in the literature but find them difficult to read because of their language and argument As a result they fail to get to grips with the subject matter and gravitate towards course textbooks instead Key Texts in Human Geography serves as a primer and companion to the key texts in human geography published over the past 40 years It is not a reader but a volume of 26 interpretive essays highlighting the significance of the text how the book should be read reactions and controversies surrounding the book the book's long term legacy It is an essential reference guide for all students of human geography and provides an invaluable interpretive tool in answering questions about human geography and what constitutes geographical knowledge Regions in Question (Routledge Revivals) Charles Gore, 2013-12-19 Originally published in 1984 Regional development planning has grown rapidly in recent years as both an academic specialism and a focus of policy and practice Books and articles on the subject have proliferated and all across the Third World governments have become committed to it setting up large new departments and even ministries Charles Gore argues that this growing popularity of regional planning in developing countries is profoundly paradoxical *Innovative Behaviour in Space and Time* Cristoforo S. Bertuglia, Silvana Lombardo, Peter Nijkamp, 2012-12-06 In the past decade there has been growing recognition that economic development is not mainly exogenously determined but to a large extent is a transformation process induced and governed by economic actors who respond to competitive institutional and political challenge This challenge and response model is increasingly accepted as a valid analytical framework in modern growth theory and also explains the popularity of endogenous growth approaches to technological innovation issues However a major and as yet largely under researched topic is the question of the diffusion and adoption of

new technological changes in the context of space time dynamics This diffusion and adoption pattern has obviously clear spatial and temporal variations connected with behavioural responses which may vary over time and different locations This means that a closer analysis of spatio temporal opportunities and impediments is necessary in order to fully map the complex interactions of technology and economy in space and time This volume sets out to bring together a collection of original contributions commissioned by the editors to highlight the spatio temporal patterns and backgrounds of the diffusion and adoption of new technologies Some are in the nature of a survey others have a modelling background and again others are case studies The contributions originate from different countries and different disciplines This book is complementary to a previously published volume on technological innovation Technological Change Economic Development and Space edited by C S Bertuglia M M Fischer and G Preto and also published by Springer Verlag 1995 **Geography** Arild

Holt-Jensen,2009-09-24 Now in a fourth edition this standard student reference has been totally revised and updated It remains the definitive introduction to the history philosophy and methodology of human geography now including a detailed explanation of key ideas in human geography s post modernist and post structuralist turns The book is organized into six sections What is Geography an introduction to the discipline and a discussion of its organization and basic research approaches informed by the question what difference does it make to think geographically Foundations of Geography an examination of geography from Antiquity to the 1950s with a special focus on human environment relation Geography 1950 1980 a critical review of the development of geography as a spatial science Paradigms and Revolutions an analysis of paradigm shifts in geography introducing students to key debates in the philosophy of science Positivism and its Critics a detailed discussion of positivism critical theory humanistic geography behavioural geography and structuralism New Trends and Ideas developing critical responses structuration theory realism post structuralism post modernism feminism and actor network theory This text explores complex ideas in an intelligible and accessible style Illustrated throughout with research examples and explanations in text boxes questions for discussion at the end of each chapter and a concept glossary this is the essential student companion to the discipline **Economic Evolution and Structural Adjustment** David Batten,John L.

Casti,Börje Johansson,2013-06-29 Since the beginning of the fifties the ruling paradigm in the discipline of economics has been that of a competitive general equilibrium Associated dynamic analyses have therefore been preoccupied with the stability of this equilibrium state corresponding simply to studies of comparative statics The need to permeate the boundaries of this paradigm in order to open up new pathways for genuine dynamic analysis is now pressing The contributions contained in this volume spring from this very ambition A growing circle of economists have recently been inspired by two distinct but complementary sources i the pathbreaking work of Joseph Schumpeter and ii recent contributions to physics chemistry and theoretical biology It turns out that problems which are firmly rooted in the economic discipline such as innovation technological change business cycles and economic development contain many clear parallels with phenomena from the

natural sciences such as the slaving principle adiabatic elimination and self organization In such dynamic worlds adjustment processes and adaptive behaviour are modelled with the aid of the mathematical theory of nonlinear dynamical systems The dynamics is defined for a much wider set of conditions or states than simply a set of competitive equilibria A common objective is to study and classify ways in which the qualitative properties of each system change as the parameters describing the system vary

Networks in Transport and Communications Cristina Capineri, Piet Rietveld, 2018-08-20 First published in 1997 this book contains contributions on policy aspects of networks from a multidisciplinary perspective including economics geography and transport science Both material and immaterial networks are examined Policy aspects refer mainly to interventions of the public sector in networks In addition the book examines the policies of other actors in shaping networks and the territorial effects of networks as a whole
