

The Big Picture – looking at levels of understanding

◆ HIGHER ORDER THINKING

Describe two simple experiments you could do:

- one to show that liquid water evaporates.
- one to show that water vapour condenses.

For each one:

- draw the set up and label the materials needed.
- describe what will be observed.
- explain the observation - why does it happen?

Liquid Water Evaporates

Water Vapour Condenses

Fox,Richard D. West,2024-08-07 What sets Numerical Methods and Analysis with Mathematical Modelling apart are the modelling aspects utilizing numerical analysis methods to obtain solutions The authors cover first the basic numerical analysis methods with simple examples to illustrate the techniques and discuss possible errors The modelling prospective reveals the practical relevance of the numerical methods in context to real world problems At the core of this text are the real world modelling projects Chapters are introduced and techniques are discussed with common examples A modelling scenario is introduced that will be solved with these techniques later in the chapter Often the modelling problems require more than one previously covered technique presented in the book Fundamental exercises to practice the techniques are included Multiple modelling scenarios per numerical methods illustrate the applications of the techniques introduced Each chapter has several modelling examples that are solved by the methods described within the chapter The use of technology is instrumental in numerical analysis and numerical methods In this text Maple Excel R and Python are illustrated The goal is not to teach technology but to illustrate its power and limitations to perform algorithms and reach conclusions This book fulfills a need in the education of all students who plan to use technology to solve problems whether using physical models or true creative mathematical modeling like discrete dynamical systems

Decision Analysis through Modeling and Game Theory William P. Fox,2024-11-08 This unique book presents decision analysis in the context of mathematical modeling and game theory The author emphasizes and focuses on the model formulation and modeling building skills required for decision analysis as well

as the technology to support the analysis The primary objective of Decision Analysis through Modeling and Game Theory is illustrative in nature It sets the tone through the introduction to mathematical modeling The text provides a process for formally thinking about the problem and illustrates many scenarios and illustrative examples These techniques and this approach center on the fact a decision makers at all levels must be exposed to the tools and techniques available to help them in the decision process b decision makers as well as analysts need to have and use technology to assist in the entire analysis process c the interpretation and explanation of the results are crucial to understanding the strengths and limitations of modeling and d the interpretation and use of sensitivity analysis is essential The book begins with a look at decision making methods including probability and statistics methods under risk of uncertainty It moves to linear programming and multi attribute decision making methods with a discussion of weighting methods Game theory is introduced through conflict games and zero sum or constant sum games Nash equilibriums are next followed by utility theory Evolutionary stable strategies lead to Nash arbitration and cooperation methods and N person methods presented for both total and partial conflict games Several real life examples and case studies using game theory are used throughout This book would be best used for a senior level course in mathematics operations research or graduate level courses or decision modeling courses offered in business schools The book will be of interest to departments offering mathematical modeling courses with any emphasis on modeling for decision making
