Weinert,2012-12-06 During the past two decades a renewed interest in children s cognitive development has stimulated numerous research activities that have been summarized in hundreds of books In our view the field of memory development provides a particularly nice example of the progress that has been made so far Since John Flavell s landmark symposium on What Is Memory Development the Development of in 1971 the question of what develops has been addressed in different ways yielding a rather complex pattern of findings A closer look at current research outcomes reveals that ways of describing and explaining developmental changes in memory performance have changed considerably during the past 20 years That is while individual differences in the use of cognitive strategies were conceived of as the most important predictors of individual differences in memory performance in the 1970s the crucial role of knowledge has been demonstrated in research conducted in the 1980s More recent studies have repeatedly emphasized that neither changes in strategies nor knowledge alone is sufficient to explain general patterns of memory development Here the claim is that strategies and different forms of knowledge e g world knowledge domain knowledge or metacognitive knowledge interact in rather complex ways to achieve successful memory performance We believe that this claim can be generalized to different fields dealing with intelligent information processing *Practical Aspects of Knowledge Management* Dimitris Karagiannis,Ulrich Reimer,2004-12-01 This book contains the papers presented at the 5th International Conference on Practical Aspects of Knowledge Management organized by the Department of Knowledge Management Institute of Computer Science and Business Informatics University of Vienna The event took place on December 02 03 2004 in Vienna The PAKM conference series offers a communication forum and meeting ground for practitioners and researchers engaged in developing and deploying advanced business solutions for the management of knowledge and intellectual capital Contributions pursuing integrated approaches which consider organizational technological and cultural issues of knowledge management have been elected for presentation PAKM is a forum for people to share their views to exchange ideas to develop new insights and to envision completely new kinds of

solutions for knowledge management problems The accepted papers are of high quality and are not too specialized so that the main issues can be understood by someone outside the respective field This is crucial for an interdisciplinary exchange of ideas Like its predecessors PAKM 2004 featured two invited talks It is a real joy seeing the visibility of the conference increase and noting that knowledge management researchers and practitioners from all over the world submitted papers This year 163 papers and case studies were submitted from which 48 were accepted
