Knowledge Management In Fuzzy Databases:

Knowledge Management in Fuzzy Databases Olga Pons, Maria A. Vila, 2014-01-15 **Knowledge Management in Fuzzy Databases** Olga Pons, Maria A. Vila, 2013-11-11 1 When I was asked by the editors of this book to write a foreword I was seized by panic Obviously neither I am an expert in Knowledge Representation in Fuzzy Databases nor I could have been beforehand unaware that the book's contributors would be some of the most outstanding researchers in the field However Amparo Vila's gentle insistence gradually broke down my initial resistance and panic then gave way to worry Which paving stones did I have at my disposal for making an entrance to the book After thinking about it for some time I concluded that it would be pretentious on my part to focus on the subjects which are dealt with directly in the contributions presented and that it would instead be better to confine myself to making some general reflections on knowledge representation given by imprecise information using fuzzy sets reflections which have been suggested to me by some words in the following articles such as graded notions fuzzy objects uncertainty fuzzy implications fuzzy inference empty intersection etc **Knowledge Management in Fuzzy Databases** Olga Pons, 2000 The volume presents recent developments in the introduction of fuzzy probabilistic and rough elements into basic components of fuzzy databases and their use notably querying and information retrieval from the point of view of data mining and knowledge discovery The main novel aspect of the volume is that issues related to the use of fuzzy elements in databases database querying information retrieval etc are presented and discussed from the point of view and for the purpose of data mining and knowledge discovery that are hot topics in recent years This may be useful for both people involved in theoretical research education and even the design and implementation of working computer systems *Flexible Approaches in Data, Information and Knowledge Management* Olivier Pivert, Sławomir Zadrozny, 2013-09-12 This volume showcases contributions from internationally known researchers in the field of information management Most of the approaches presented here make use of fuzzy logic introduced by L A Zadeh almost 50 years ago which constitute a powerful tool to model and handle gradual concepts What all of these contributions have in common is placing the user at the center of the information system be it for helping him/her to query a data set to handle imperfect information or to discover useful knowledge from a massive collection of data Researchers working in data and knowledge management will greatly benefit from this collection of up to date studies This may be also an invaluable source of information for postgraduate students interested in advanced information management techniques *Handbook of Research on Innovative Database Query Processing Techniques* Yan, Li, 2015-09-25 Research and development surrounding the use of data queries is receiving increased attention from computer scientists and data specialists alike Through the use of query technology large volumes of data in databases can be retrieved and information systems built based on databases can support problem solving and decision making across industries The Handbook of Research on Innovative Database Query Processing Techniques focuses on the growing topic of database query processing methods technologies and applications

Aimed at providing an all inclusive reference source of technologies and practices in advanced database query systems this book investigates various techniques including database and XML queries spatiotemporal data queries big data queries metadata queries and applications of database query systems This comprehensive handbook is a necessary resource for students IT professionals data analysts and academicians interested in uncovering the latest methods for using queries as a means to extract information from databases This all inclusive handbook includes the latest research on topics pertaining to information retrieval data extraction data management design and development of database queries and database and XM queries

Spatio-Temporal Databases Rita de Caluwe,Guy De Tré,Gloria Bordogna,2013-04-17 Spatio Temporal Databases explores recent trends in flexible querying and reasoning about time and space related information in databases It shows how flexible querying enhances standard querying expressiveness in many different ways with the aim of facilitating extraction of relevant data and information Flexible spatial and temporal reasoning denotes qualitative reasoning about dynamic changes in the spatial domain characterized by imprecision or uncertainty or both Many of the contributions focus on GIS while some others are more general or focus on related application fields presenting theoretical viewpoints and techniques that are inspiring or can be adapted for GIS The first part bundles the contributions on advances at the theoretical level also discussing examples and opening further perspectives The second part presents contributions on well developed applications The authors explain how to handle imprecision and uncertainty demonstrating how advanced techniques can help to solve diverse problems related to GIS

Future Directions for Intelligent Systems and Information Sciences Nikola Kasabov, 2000-08-04 This edited volume comprises invited chapters that cover five areas of the current and the future development of intelligent systems and information sciences Half of the chapters were presented as invited talks at the Workshop Future Directions for Intelligent Systems and Information Sciences held in Dunedin New

Zealand 22-23 November 1999 after the International Conference on Neuro Information Processing (CONIP) ANZIISI ANNES 99 held in Perth Australia. In order to make this volume useful for researchers and academics in the broad area of information sciences, I invited prominent researchers to submit materials and present their view about future paradigms, future trends and directions. Part I contains chapters on adaptive evolving learning systems. These are systems that learn in a life-long online mode and in a changing environment. The first chapter, written by the editor, presents briefly the paradigm of Evolving Connectionist Systems (ECOS) and some of their applications. The chapter by Sung Bae Cho presents the paradigms of artificial life and evolutionary programming in the context of several applications: mobile robots, adaptive agents of the WWW. The following three chapters, written by R. Duro, J. Santos and J. A. Becerra (chapter 3), G. Coghill (chapter 4), Y. Maeda (chapter 5), introduce new techniques for building adaptive learning robots. *New Learning Paradigms in Soft Computing* Lakhmi C. Jain, Janusz Kacprzyk, 2013-06-05. Learning is a key issue in the analysis and design of all kinds of intelligent systems. In recent time, many new paradigms of automated machine learning have been proposed in the literature. Soft computing, that has proved to be an effective and efficient tool in so many areas of science and technology, seems to offer new qualities in the realm of machine learning too. The purpose of this volume is to present some new learning paradigms that have been triggered or at least strongly influenced by soft computing tools and techniques, mainly related to neural networks, fuzzy logic, rough sets and evolutionary computations.
