Algebraic Numbers and Algebraic Functions P.M. Cohn, 2018-01-18 This book is an introduction to the theory of algebraic numbers and algebraic functions of one variable The basic development is the same for both using E Artin's elegant approach via valuations Number Theory is pursued as far as the unit theorem and the finiteness of the class number In function theory the aim is the Abel Jacobi theorem describing the divisor class group with occasional geometrical asides to help understanding Assuming only an undergraduate course in algebra plus a little acquaintance with topology and complex function theory the book serves as an introduction to more technical works in algebraic number theory function theory or algebraic geometry by an exposition of the central themes in the subject

The Story of Algebraic Numbers in the First Half of the 20th Century Władysław Narkiewicz, 2019-01-18 The book is aimed at people working in number theory or at least interested in this part of mathematics It presents the development of the theory of algebraic numbers up to the year 1950 and contains a rather complete bibliography of that period The reader will get information about results obtained before 1950 It is hoped that this may be helpful in preventing rediscoveries of old results and might also inspire the reader to look at the work done earlier which may hide some ideas which could be applied in contemporary research

Theta Functions, Bowdoin 1987 Leon Ehrenpreis, Robert Clifford Gunning, 1989 During his long and productive career Salomon Bochner worked in a variety of different areas of mathematics This four part set brings together his collected papers illustrating the range and depth of his mathematical interests The books are available either individually or as a set

Quadratic Forms and Their Applications Eva Bayer-Fluckiger, David Lewis, Andrew Ranicki, 2000 This volume outlines the proceedings of the conference on Quadratic Forms and Their Applications held at University College

Dublin It includes survey articles and research papers ranging from applications in topology and geometry to the algebraic theory of quadratic forms and its history Various aspects of the use of quadratic forms in algebra analysis topology geometry and number theory are addressed Special features include the first published proof of the Conway Schneeberger Fifteen Theorem on integer valued quadratic forms and the first English language biography of Ernst Witt founder of the theory of quadratic forms

Lectures on the Mordell-Weil Theorem Jean-P. Serre, 2013-06-29 The book is based on a course given by J P Serre at the Coll ge de France in 1980 and 1981 Basic techniques in Diophantine geometry are covered such as heights the Mordell Weil theorem Siegel s and Baker s theorems Hilbert s irreducibility theorem and the large sieve Included are applications to for example Mordell s conjecture the construction of Galois extensions and the classical class number 1 problem Comprehensive bibliographical references

The Grothendieck Theory of Dessins D'Enfants Leila Schneps, 1994-07-28 Dessins d Enfants are combinatorial objects namely drawings with vertices and edges on topological surfaces Their interest lies in their relation with the set of algebraic curves defined over the closure of the rationals and the corresponding action of the absolute Galois group on them The study of this group via such related combinatorial methods as its action on the Dessins and on certain fundamental groups of moduli spaces was initiated by Alexander Grothendieck in his unpublished Esquisse d un Programme and developed by many of the mathematicians who have contributed to this volume The various articles here unite all of the basics of the subject as well as the most recent advances Researchers in number theory algebraic geometry or related areas of group theory will find much of interest in this book

Groups as Galois Groups Helmut Völklein, 1996-08-13 This book describes various approaches to the Inverse Galois Problem a classical unsolved problem of mathematics posed by Hilbert at the beginning of the century It brings together ideas from group theory algebraic geometry and number theory topology and analysis Assuming only elementary algebra and complex analysis the author develops the necessary background from topology Riemann surface theory and number theory The first part of the book is quite elementary and leads up to the basic rigidity criteria for the realisation of groups as Galois groups The second part presents more advanced topics such as braid group action and moduli spaces for covers of the Riemann sphere GAR and GAL realizations and patching over complete valued fields Graduate students and mathematicians from other areas especially group theory will find this an excellent introduction to a fascinating field

Konstruktive Galoistheorie Bernd H. Matzat, 2006-12-08 This volume is based on a lecture course on constructive Galois Theory given in Karlsruhe by the author The purpose of the course was to introduce students to the methods developed in the past few years for the realisation of finite groups as Galois groups over \mathbb{Q} or over abelian number fields Thus the book is addressed primarily to students with algebraic interests as seminar material Specialists also will find in it a multitude of examples of polynomials with special Galois groups which can of course also be used for the usual algebra courses

Encyclopaedia of Mathematics Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics

It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

Characters and Automorphism Groups of Compact Riemann Surfaces Thomas Breuer, 2000-09-21 Addresses a topic from classical analysis using modern algebraic and computational tools For graduates and researchers

Representations of Groups Klaus Lux, Herbert Pahlings, 2010-07-01 The representation theory of finite groups has seen rapid growth in recent years with the development of efficient algorithms and computer algebra systems This is the first book to provide an introduction to the ordinary and modular representation theory of finite groups with special emphasis on the computational aspects of the subject Evolving from courses taught at Aachen University this well paced text is ideal for graduate level study The authors provide over 200 exercises both theoretical and computational and include worked examples using the computer algebra system GAP These make the abstract theory tangible and engage students in real hands on work GAP is freely available from www.gap-system.org and readers can download source code and solutions to selected exercises from the book's web page

Computational Perspectives on Number Theory Duncan A. Buell, Jeremy T. Teitelbaum, A. O. L. Atkin, 1997 This volume contains papers presented at the conference Computational Perspectives on Number Theory held at the University of Illinois at Chicago in honor of the retirement of A O L Atkin In keeping with Atkin's interests and work the papers cover a range of topics including algebraic number theory p -adic modular forms and modular curves Many of the papers reflect Atkin's particular interest in computational and algorithmic questions

Field Arithmetic Michael D. Fried, Moshe Jarden, 2023-06-12 This book uses algebraic tools to study the elementary properties of classes of fields and related algorithmic problems The first part covers foundational material on infinite Galois theory profinite groups algebraic function fields in one variable and plane curves It provides complete and elementary proofs of the Chebotarev density theorem and the Riemann hypothesis for function fields together with material on ultraproducts decision procedures the elementary theory of algebraically closed fields

undecidability and nonstandard model theory including a nonstandard proof of Hilbert's irreducibility theorem. The focus then turns to the study of pseudo algebraically closed (PAC) fields, related structures, and associated decidability and undecidability results. PAC fields are fields K with the property that every absolutely irreducible variety over K has a rational point. This property first arose in the elementary theory of finite fields and has deep connections with number theory. This fourth edition substantially extends, updates, and clarifies the previous editions of this celebrated book and includes a new chapter on Hilbertian subfields of Galois extensions. Almost every chapter concludes with a set of exercises and bibliographical notes. An appendix presents a selection of open research problems. Drawing from a wide literature at the interface of logic and arithmetic, this detailed and self-contained text can serve both as a textbook for graduate courses and as an invaluable reference for seasoned researchers.
