Knowledge Acquisition And Machine Learning Theory Methods And Applications:

Knowledge Acquisition and Machine Learning Katharina Morik, 1993-09-13 For graduate research level students and professors this book integrates machine learning with knowledge acquisition to overcome the problems of building models for knowledge based systems to maintain them successfully It also reports on BLIP and MOBAL systems developed over the last decade which illustrate a particular way of unifying knowledge acquisition and machine learning Practically orientated theoretical skills have been used and tested in real world applications Integrates machine learning with knowledge acquisition to overcome the problems of building models for knowledge based systems to maintain them successfully Reports on BLIP and MOBAL systems that have been developed over the past 10 years which illustrate a particular way of unifying knowledge acquisition and machine learning Practically oriented theoretical results have been used and tested in real world applications from the start

Machine Learning: ECML-94 Francesco Bergadano, 1994-03-22 This volume contains the proceedings of the European Conference on Machine Learning 1994 which continues the tradition of earlier meetings and which is a major forum for the presentation of the latest and most significant results in machine learning Machine learning is one of the most important subfields of artificial intelligence and computer science as it is concerned with the automation of learning processes This volume contains two invited papers 19 regular papers and 25 short papers carefully reviewed and selected from in total 88 submissions The papers describe techniques algorithms implementations and experiments in the area of machine learning

Machine Learning and Knowledge Acquisition Gheorghe Tecuci, Yves Kodratoff, 1995 Currently both fields are moving towards an integrated approach using machine learning techniques to automate knowledge acquisition from experts and knowledge acquisition techniques to guide and assist the learning process

Machine Learning Methods for Commonsense Reasoning Processes: Interactive Models Naidenova, Xenia, 2009-10-31 This book suggests that classification is a key to human commonsense reasoning and transforms traditional considerations of data and knowledge communications presenting an effective classification of logical rules used in the modeling of commonsense reasoning

Expert Systems Cornelius T. Leondes, 2001-09-26 This six volume set presents cutting edge advances and applications of expert systems Because expert systems combine the expertise of engineers computer scientists and computer programmers each group will benefit from buying this important reference work An expert system is a knowledge based computer system that emulates the decision making ability of a human expert The primary role of the expert system is to perform appropriate functions under the close supervision of the human whose work is supported by that expert system In the reverse this same expert system can monitor and double check the human in the performance of a task Human computer interaction in our highly complex world requires the development of a wide array of expert systems Expert systems techniques and applications are presented for a diverse array of topics including Experimental design and decision support The integration of machine learning with knowledge acquisition for the design of expert systems Process planning in design

and manufacturing systems and process control applications Knowledge discovery in large scale knowledge bases Robotic systems Geographic information systems Image analysis recognition and interpretation Cellular automata methods for pattern recognition Real time fault tolerant control systems CAD based vision systems in pattern matching processes Financial systems Agricultural applications Medical diagnosis **Machine Learning: ECML-95** Nada Lavrač, 1995-04-05

This volume constitutes the proceedings of the Eighth European Conference on Machine Learning ECML 95 held in Heraklion Crete in April 1995 Besides four invited papers the volume presents revised versions of 14 long papers and 26 short papers selected from a total of 104 submissions The papers address all current aspects in the area of machine learning also logic programming planning reasoning and algorithmic issues are touched upon **In Order to Learn** Frank E.

Ritter, Josef Nerb, Erno Lehtinen, Timothy M. O'Shea, 2007-07-30 Order affects the results you get Different orders of presenting material can lead to qualitatively and quantitatively different learning outcomes These differences occur in both natural and artificial learning systems In Order to Learn shows how order effects are crucial in human learning instructional design machine learning and both symbolic and connectionist cognitive models Each chapter explains a different aspect of how the order in which material is presented can strongly influence what is learned by humans and theoretical models of learning in a variety of domains In addition to data models are provided that predict and describe order effects and analyze how and when they will occur The introductory and concluding chapters compile suggestions for improving learning through better sequences of learning materials including how to take advantage of order effects that encourage learning and how to avoid order effects that discourage learning Each chapter also highlights questions that may inspire further research Taken together these chapters show how order effects in different areas can and do inform each other In Order to Learn will be of interest to researchers and students in cognitive science education machine learning **Concept Formation and**

Knowledge Revision Stefan Wrobel, 2013-03-14 A fundamental assumption of work in artificial intelligence and machine learning is that knowledge is expressed in a computer with the help of knowledge representations Since the proper choice of such representations is a difficult task that fundamentally affects the capabilities of a system the problem of automatic representation change is an important topic in current research Concept Formation and Knowledge Revision focuses on representation change as a concept formation task regarding concepts as the elementary representational vocabulary from which further statements are constructed Taking an interdisciplinary approach from psychological foundations to computer implementations the book draws on existing psychological results about the nature of human concepts and concept formation to determine the scope of concept formation phenomena and to identify potential components of computational concept formation models The central idea of this work is that computational concept formation can usefully be understood as a process that is triggered in a demand driven fashion by the representational needs of the learning system and identify the knowledge revision activities of a system as a particular context for such a process The book presents a detailed analysis of

the revision problem for first order clausal theories and develops a set of postulates that any such operation should satisfy. It shows how a minimum theory revision operator can be realized by using exception sets and that this operator is indeed maximally general. The book then shows that concept formation can be triggered from within the knowledge revision process whenever the existing representation does not permit the plausible reformulation of an exception set, demonstrating the usefulness of the approach both theoretically and empirically within the learning knowledge acquisition system MOBAL. In using a first order representation, this book is part of the rapidly developing field of Inductive Logic Programming (ILP). By integrating the computational issues with psychological and fundamental discussions of concept formation phenomena, the book will be of interest to readers both theoretically and psychologically inclined. From the foreword by Katharina Morik: The ideal to combine the three sources of artificial intelligence research has almost never been reached. Such a combined and integrated research requires the researcher to master different ways of thinking, different work styles, different sets of literature and different research procedures. It requires capabilities in software engineering for the application part, in theoretical computer science for the theory part and in psychology for the cognitive part. The most important capability for artificial intelligence is to keep the integrative view and to create a true original work that goes beyond the collection of pieces from different fields. This book achieves such an integrative view of concept formation and knowledge revision by presenting the way from psychological investigations that indicate that concepts are theories and point at the important role of a demand for learning to an implemented system which supports users in their tasks when working with a knowledge base and its theoretical foundation. Ontology Learning for the Semantic Web Alexander Maedche, 2012-12-06

Ontology Learning for the Semantic Web explores techniques for applying knowledge discovery techniques to different web data sources such as HTML documents, dictionaries, etc. in order to support the task of engineering and maintaining ontologies. The approach of ontology learning proposed in Ontology Learning for the Semantic Web includes a number of complementary disciplines that feed in different types of unstructured and semi-structured data. This data is necessary in order to support a semi-automatic ontology engineering process. Ontology Learning for the Semantic Web is designed for researchers and developers of semantic web applications. It also serves as an excellent supplemental reference to advanced level courses in ontologies and the semantic web.

Building Intelligent Agents Gheorghe Tecuci, 1998-06-23 Building Intelligent Agents is unique in its comprehensive coverage of the subject. The first part of the book presents an original theory for building intelligent agents and a methodology and tool that implement the theory. The second part of the book presents complex and detailed case studies of building different types of agents: an educational assessment agent, a statistical analysis assessment and support agent, an engineering design assistant, and a virtual military commander. Also featured in this book is Disciple, a toolkit for building interactive agents which function in much the same way as a human apprentice. Disciple-based agents can reason both with incomplete information but also with information that is potentially incorrect. This approach in which the

agent learns its behavior from its teacher integrates many machine learning and knowledge acquisition techniques taking advantage of their complementary strengths to compensate for each others weakness As a consequence it significantly reduces or even eliminates the involvement of a knowledge engineer in the process of building an intelligent agent
