Moore,2017-07-05 This volume of essays references traditional and contemporary thought on theory and practice in music education for all age groups from the very young to the elderly The material spans a broad range of subject areas from history and philosophy to art and music and addresses issues such as curriculum pedagogy assessment and evaluation as well as current issues in technology and performance standards Written by leading researchers and educators from diverse countries and cultures this selection of previously published articles research studies and book chapters is representative of the most frequently discussed and debated topics in the profession This volume which documents the importance of lifelong learning is an indispensable reference work for specialists in the field of music education *Computer-aided Ear-training* Susanna Király,2016-07-14 My doctoral thesis has involved two related tasks The first was to analyse Zolt n Kod ly s philosophy of music education and on this basis to develop a computer assisted instruction method CAI for teaching music theory and self ge ear training The second task was to experiment with the effectiveness of

this method and compare it with traditional approaches to teaching. Many students find music theory and ear training difficult. During the 1990s in connection with my licentiate thesis *Solfège in the Computer Classroom* 2000 I initiated this research project and developed a CAI method for teaching music theory and solfège. I wanted to see just how useful Kodály's approach could be in computer aided teaching and learning. The results show that the Kodály approach can be successfully applied to the development of a computer aided solfège programme and the Kodály system is applicable to new learning environments and teaching practices. In music education CAI is an area with great potential for development. It offers multiple learning options and can enhance students' motivation to study music theory and ear training; some of the learning outcomes were even better than with the traditional ways of learning. The results also show, however, that the teacher/pupil interaction is essential in a computer aided learning programme.
